# FEDERAL RESERVE BULLETIN

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM, WASHINGTON, D.C.

### Publications Committee

Joseph R. Coyne, *Chairman* □ Michael Bradfield □ S. David Frost □ Griffith L. Garwood □ James L. Kichline □ Edwin M. Truman

The Federal Reserve Bulletin is issued monthly under the direction of the staff publications committee. This committee is responsible for opinions expressed except in official statements and signed articles. It is assisted by the Economic Editing Section headed by Mendelle T. Berenson, the Graphic Communications Section under the direction of Peter G. Thomas, and Publications Services supervised by Linda C. Kyles.

### Table of Contents

### 411 MEASURING THE FOREIGN-EXCHANGE VALUE OF THE DOLLAR

This article first describes the uses of weighted average exchange-rate indexes; it then focuses on measures of exchange rates suitable for analyzing trade flows and compares their performance in the context of the equations used by the staff of the Federal Reserve Board to forecast trade components and priced deflators for exports and imports.

#### **423 INDUSTRIAL PRODUCTION**

Industrial production declined 0.3 percent in March.

#### **425 STATEMENTS TO CONGRESS**

Paul A. Volcker, Chairman, Board of Governors, reviews some aspects of the world economic situation, particularly exchange market developments and international debt, before the Subcommittee on International Finance and Monetary Policy of the Senate Committee on Banking, Housing, and Urban Affairs, April 7, 1987.

- 430 Martha R. Seger, Member, Board of Governors, discusses proposed legislation to require disclosures of prices and terms in credit card applications and solicitations and to establish a nationwide ceiling on credit card interest rates; Governor Seger says that the Board believes it is important for consumers to have adequate information to shop for credit and that the Board does not believe the imposition of a federal ceiling on credit card rates is appropriate, before the Subcommittee on Consumer Affairs of the Senate Committee on Banking, Housing, and Urban Affairs, April 21, 1987.
- 435 Chairman Volcker discusses the joint proposal of the U.S. federal banking agencies

and the Bank of England for the establishment of a risk-based capital framework and says that he believes that adoption by U.S. regulators of a framework along the lines of the U.S.-U.K. proposal represents a reasonable step toward a more rational framework for relating the analysis of capital needs to risk considerations, before the Subcommittee on General Oversight and Investigations of the House Committee on Banking, Finance and Urban Affairs, April 30, 1987.

#### 441 ANNOUNCEMENTS

Adoption of policy statement on responsibilities of bank holding companies to their subsidiary banks.

Report available on priced service operations in 1986.

Issuance of revised List of Stocks Subject to OTC Margin Regulations.

Proposal to amend Regulation T.

Admission of four state banks to membership in the Federal Reserve System.

### 443 RECORD OF POLICY ACTIONS OF THE FEDERAL OPEN MARKET COMMITTEE

At its meeting on February 10–11, 1987, the Committee established monetary growth ranges for 1987 of 5½ to 8½ percent for both M2 and M3. The associated range for growth in total domestic nonfinancial debt was set at 8 to 11 percent. The Committee anticipated that growth in M1 would slow in 1987 from its very rapid pace in 1986, but the members decided not to establish a precise target for the year; instead, the appropriateness of M1 changes would be evaluated during the year in the light of the behavior of M1 velocity, developments in the economy and financial markets, and the nature of emerging price pressures.

With regard to the implementation of policy for the period immediately ahead, the Committee adopted a directive that called for no change in the current degree of pressure on reserve positions. The members expected this approach to policy implementation to be consistent with some reduction in the growth of M2 and M3 to annual rates of about 6 to 7 percent over the two-month period from January to March. Over the same interval, growth in M1 was expected to moderate substantially from an extraordinarily high rate in the closing months of 1986. The members indicated that somewhat greater reserve restraint might be acceptable, over the intermeeting period depending on the behavior of the monetary aggregates, taking into account the strength of the business expansion, the performance of the dollar in foreign exchange markets, progress against inflation. and conditions in domestic and international credit markets. The members agreed that the intermeeting range for the federal funds rate, which provides a mechanism for initiating consultation of the Committee when its boundaries are persistently exceeded, should be left unchanged at 4 to 8 percent.

#### **453 LEGAL DEVELOPMENTS**

Various bank holding company, bank service corporation, and bank merger orders; and pending cases.

## Measuring the Foreign-Exchange Value of the Dollar

B. Dianne Pauls, of the Board's Division of International Finance, prepared this article.

Some observers, disappointed with the response of the U.S. trade balance to the depreciation of the dollar since February 1985, have concluded that the established weighted average indexes of exchange rates have overstated the dollar's decline. In particular, they note, the dollar has depreciated much less against the currencies of some key newly industrialized trading partners than it has against the currencies of the industrial countries represented in the traditional indexes. This discrepancy has spawned a plethora of new exchange-rate indexes, with the frequent implication that an ideal index exists.

This article first describes the uses of weighted average exchange-rate indexes. An index of the dollar's value may be helpful in assessing the effect of changes in various bilateral exchange rates on a country's trade position. But such indexes have many other uses, and the selection of an index varies with the application. Although the inclusion of currencies of developing countries in an index may be useful for analyzing trade developments, it is not appropriate for some other purposes, such as providing information about monetary conditions. The latter part of the article focuses on measures of exchange rates suitable for analyzing trade flows and compares their performance in the context of the equations used by the staff of the Federal Reserve Board to forecast trade components and price deflators for exports and imports. The results suggest that the addition of the currencies of important developing-country trading partners in an index of exchange rates improves its performance in forecasting export volumes and import prices but makes little difference for the forecasts of export prices.

USES OF WEIGHTED AVERAGE INDEXES OF EXCHANGE RATES

An index of weighted average exchange rates is a summary measure of a set of often divergent changes in bilateral exchange rates. The advent of more frequent adjustments in exchange rates in the 1970s and the broad-based pattern of U.S. trade and capital flows made such a measure necessary because no single bilateral exchange rate could adequately reflect changes in the dollar's value. The index developed by the staff of the Federal Reserve Board in 1971, when the system of fixed exchange rates first broke down, was intended as a summary measure of how the dollar was faring against the currencies of the 10 major foreign countries that participated in the Smithsonian Accord of December 1971.

Generally, an index of weighted average exchange rates may be used to summarize the influence of prices of the dollar, expressed in various foreign currencies, on some macroeconomic variable or policy objective. Because the choice of an index varies with the application, examining the alternative uses of such indexes is crucial to understanding their construction.

Exchange rates potentially play a role in determining at least four important macroeconomic variables, and summary measures of exchange rates for each application should reflect the specific manner in which exchange rates influence the variable of interest.

First, exchange rates affect the price competitiveness of U.S. goods, which is a principal determinant of the country's trade balance. For example, a decline in the average foreign-currency price of the dollar tends to improve U.S. price competitiveness by lowering the average price of U.S. goods relative to the average dollar price of foreign goods. As a result, over time the volume

412

of U.S. exports tends to increase and that of U.S. imports tends to decrease. Moreover, relative movements in prices in the United States and abroad and in the factors that influence these prices also affect price competitiveness. Thus to construct a summary measure of U.S. price competitiveness requires an index of foreign-currency prices of the dollar—a nominal exchange-rate index—as well as indicators of relative prices in the United States and abroad. These measures can be combined into a weighted average index of real exchange rates.

Second, changes in exchange rates affect the domestic price level. After a depreciation of the dollar, the dollar prices of imported goods and the prices of domestically produced goods that compete with imports tend to rise, thereby putting upward pressure on U.S. prices. In addition, an increase in the demand for U.S. exports, stimulated by a decline in the dollar, contributes to a rise in domestic prices in the United States.

A summary measure of the influence of changes in the dollar prices of foreign goods on domestic prices requires both an index of nominal exchange rates and an index of foreign prices. Foreign exporters may respond differently to changes in production costs in terms of their home currency and to variations in exchange rates; changes in production costs may be regarded as more permanent and hence may appear more readily in import prices. If such differences in response are important, then nominal exchange rates and foreign prices should be treated as separate determinants of domestic inflation rather than combined into a single index of real weighted average exchange rates. In addition, exchange rates influence U.S. inflation indirectly through their effect on U.S. export demand, which, as noted above, is best captured by variations in an index of real exchange rates.

Third, changes in exchange rates may influence asset demands. For example, alternatives to holding domestic currency are offered by holding foreign currencies, or deposits or securities denominated in either foreign or domestic currencies. In this case, expected rates of return on assets denominated in foreign currencies, which consist of the nominal rate of interest on these deposits along with the expected rate of change in the exchange rate, could affect the

demand for money. Movements in domestic prices will also influence the demand for money, and changes in exchange rates thus affect the demand for money indirectly by altering domestic prices.

Furthermore, according to one school of thought, exchange rates are a source of information about monetary conditions. Changes in nominal interest rates can reflect changes either in real rates or in inflation expectations, so that movements in nominal interest rates alone can give ambiguous signals about the stance of monetary policy. In contrast, exchange rates should respond differently to these two phenomena. A rise in real rates of return on assets denominated in dollars increases the demand for such assets, causing the dollar to appreciate. An increase in U.S. inflation tends to make U.S. goods less competitive, so that a future depreciation of the dollar is needed to maintain the relative price of U.S. versus foreign products. Thus the spot exchange rate is relatively unaffected by a rise in nominal interest rates resulting from an increase in expectations of inflation: the rise in the nominal rate of return is offset by an expected depreciation of the dollar. Because of the different responses of exchange rates, the nexus of interest rates and exchange rates may reflect monetary conditions better than the interest rate alone does. For exchange rates to be a useful indicator of monetary conditions, however, they should influence asset demands, including the demand for money, which has yet to be firmly established empirically.

Finally, an index of exchange rates may be used to assess changes in the real value of the wealth of U.S. residents. This use corresponds most closely to the classic application of consumer price indexes in evaluating changes in the standard of living of U.S. residents. However, information about the foreign-currency composition of assets and liabilities required for such an analysis is not available, making such an application difficult.

### CONSTRUCTION OF WEIGHTED AVERAGE EXCHANGE RATES

Indexes of the dollar's weighted average foreignexchange value are constructed by averaging the dollar's bilateral exchange rates in terms of a number of foreign currencies. The construction of such indexes poses at least four questions: How should the currencies in an index be weighted? Should the indexes summarize nominal or real exchange rates? What are the appropriate deflators for a real index? What currencies should be included? Answers to these questions depend on the purpose of the index.

### Weighting Schemes

In principle, the weights assigned to each foreign currency in an index should reflect the importance of that currency with respect to the economic problem being analyzed. Specifically, the weights should be derived from economic models relating the macroeconomic variable of interest to each of the individual bilateral exchange rates as well as to its other determinants. Such weights capture both the direct effect of changes in exchange rates on the variable being analyzed and their indirect influence through other economic variables; they should also capture the relative strength of those effects.

Most indexes of exchange rates are aimed at assessing the effect of changes in exchange rates on U.S. trade flows. Thus the weight of any particular bilateral exchange rate in such indexes depends in part on the extent of competition between the two countries involved. Take the mark-dollar rate, for example. Because the United States and Germany compete in other markets besides their own two, changes in the mark-dollar bilateral rate will influence U.S. exports to third markets and U.S. imports from third markets. Such effects are referred to as third-country effects.

In an index used to measure how changes in the foreign-exchange value of the dollar affect U.S. trade, the appropriate weights for individual currencies come from equations relating U.S. trade components to exchange rates as well as to their other determinants. For the mark, the weight obtained in this way reflects competition between U.S. and German producers in U.S., German, and other markets and the sensitivity of producers and consumers to prices in each of these markets.

One problem in taking a strict theoretical approach to constructing an index of weighted average exchange rates is that reliable estimates of these price sensitivities generally are not available. The International Monetary Fund derives the weights in its index of weighted average exchange rates from its model of multilateral exchange rates; however, some of the price sensitivities are simply assumed. The difficulty in obtaining reliable estimates of these parameters generally forces the analyst to use some measure of trade shares as an approximation to the theoretically preferred weights. The two most common weighting schemes are bilateral trade shares—used by Morgan Guaranty, the U.S. Treasury, the Department of Commerce, the Bundesbank, and the Federal Reserve Banks of Atlanta and Dallas-and multilateral trade shares, which the Federal Reserve Board staff uses. In an index of the dollar's foreign-exchange value, bilateral weights correspond to each country's share of total U.S. exports plus imports (sometimes the weights for imports and exports are calculated separately). By contrast, multilateral weights are the shares of each country in the combined total trade of all the foreign countries included in the index. The mathematical expressions for these weights are given in equations 1 and 2 in the accompanying box.

Each weighting scheme has conceptual advantages and disadvantages. Bilateral weights emphasize trade between two countries but neglect the effects of competition in third markets. In an index of dollar exchange rates, for example, a bilateral weight on the German mark allows for a decline in U.S. demand for German machinery after a depreciation of the dollar against the mark; but it does not allow for a shift in demand toward U.S. machinery and away from German machinery in other markets in which Germany and the United States compete. Bilateral weights are appropriate conceptually only if such third-country effects are absent, which seems an unrealistic assumption.

Multilateral trade weights reflect the role of each country as a competitor in the world market; their use is therefore an attempt to capture the effects of competition in markets besides the home market. However, they do not take account of the specific markets in which countries

### TRADE-WEIGHTING SCHEMES USED IN ALTERNATIVE INDEXES OF EXCHANGE RATES FOR THE DOLLAR

1. Bilateral weights

$$w_{i} = \frac{x_{US}^{i} + m_{US}^{i}}{\sum_{k} (x_{US}^{k} + m_{US}^{k})}$$

2. Multilateral weights

$$w_i = \frac{x_i + m_i}{\sum\limits_{\substack{k \\ k \neq i \\ k \neq i$$

3. Modified bilateral weights, as defined in the indexes of the European Communities and the Organisation for Economic Co-operation and Development

$$w_i = \left(\frac{y_i}{\sum\limits_{\substack{k \\ k \neq US}} x_k^i + y_i}\right) \left(\frac{x_{US}^i}{\sum\limits_{\substack{k \\ k \neq US}} x_{US}^k + y_{US}}\right)$$

$$+ \sum_{\substack{j \neq i \\ k \neq US}} \left( \frac{x_i^j}{\sum\limits_{\substack{k \\ k \neq US}} x_k^i + y_j} \right) \left( \frac{x_{US}^j}{\sum\limits_{\substack{k \\ k \neq US}} x_{US}^k + y_{US}} \right)$$

4. Modified bilateral weights, as defined in Morgan Guaranty's broad index

$$w_i = \left(\frac{y_i}{\sum_k x_k^i + y_i}\right) \left(\frac{x_{US}^i}{\sum_k x_{US}^k}\right) + \frac{m_{US}^i}{\sum_k m_{US}^k},$$

where

= weight of currency i Wi

 $x_i^j$ = exports by country i to country j

 $m_{US}$ = U.S. imports from country i

= exports from country i to the rest of the countries in the index

= imports to country i from the rest of the m, countries in the index

= sales by country i in its own domestic  $y_i$ market.

SOURCES. Martine Durand, "Method of Calculating Effective Exchange Rates and Indicators of Competitiveness, Working Paper 29, February 1986; European Communities, "The Influence of Exchange Rate Changes on Prices: A Study of 18 Industrial Countries-Technical Annex: The Calculation of Effective Exchange Rates and Indices of Competitiveness, mimeo, September 1986; Morgan Guaranty, World Financial Markets, October/November 1986.

compete. If countries trade in very different markets, an index that embodies this weighting scheme will misrepresent changes in overall competitiveness. For example, the ven and the Dutch guilder have appreciated in similar degree against the dollar since its peak in early 1985, and hence those two currencies have also shown similar changes against other currencies. Because a multilateral index weights these other currencies similarly in constructing weighted average exchange rates for the yen and guilder, those two currencies will display roughly comparable appreciation on a weighted-average basis. Yet, Japan obviously has suffered a greater loss of overall competitiveness than the Netherlands has: Japan relies more heavily on the U.S. market and also competes extensively with the newly industrialized countries in Asia, whose currencies have depreciated against the yen, whereas the Netherlands trades mostly with other European countries, whose currencies have changed little against the guilder.

To provide a perspective on the practical significance of this difference in weighting schemes, chart 1 compares bilateral and multilateral tradeweighted indexes of the dollar's value against the currencies of the other Group of Ten countries. (In recent years, Switzerland has joined the Group of Ten, making in fact 11 countries. Nonetheless, by convention, the name remains the Group of Ten.) Both indexes were constructed using average weights for 1978-83. (The index with multilateral weights differs slightly from the current index compiled by the Board staff, which is based on 1972-76 average trade shares.) The bilaterally weighted index shows a less pronounced rise in the dollar's value through early 1. Exchange value of the dollar

against the G-10 currencies

Monthly series. Percentage changes are computed logarithmically. Indexes use 1978-83 average weights.

1985 and a smaller decline subsequently. Overall, both indexes suggest that about two-thirds to three-fourths of the dollar's rise after the fourth quarter of 1980 had been reversed by the end of 1986 (see table 1).

The difference in the magnitude of the dollar's swings based on the indexes weighted by multilateral and bilateral trade reflects differences in the weight of the Canadian dollar, which has changed relatively little in terms of the U.S. dollar during this period. Because Canada accounts for such a large share of total U.S. trade, in this 10-currency index Canada's bilateral weight is four times as great as its multilateral weight. Whether it is appropriate to assign the Canadian dollar such a large weight is an open question. More than 50 percent of U.S. trade with Canada consists of intracompany transactions in the automotive industry, and of homogeneous commodities, whose prices are determined in world markets. Because the prices of these goods may be relatively insensitive to changes in U.S.-Canadian exchange rates, bilateral weights may overstate the importance of the Canadian dollar in a summary measure of the price competitiveness of U.S. goods.

Multilateral weighting schemes overlook the importance of specific markets to specific countries. Alternative weighting schemes, used by the European Communities (EC) and the Organisation for Economic Co-operation and Development (OECD), incorporate third-country effects in a more detailed way by taking account of which countries compete in which markets. These so-called modified bilateral weighting schemes begin with estimates of each country's share in each market, or importing country. Germany's market share in France, for example, is calculated as the ratio of German exports to France to total sales to France, including sales of French products. If the index is for the dollar, these market shares do not include U.S. sales in the French market because their purpose is to capture the role of each U.S. competitor. Next, the proportion that the French market represents in total U.S. sales, including sales in the United States, is calculated. Finally, these measures are combined to obtain a set of currency weights that reflect the importance of each U.S. competitor overall. The weight for the mark is the sum of Germany's market share in each market weight Movements in the value of the dollar, alternative indexes of exchange rates

ed by the importance of that market to the United States (see equation 3 in the box). Compared with the standard weighting schemes, these alternatives broaden the definition of competing goods to include a country's sales in its own domestic market. Nonetheless, they limit the home country's sales to so-called tradable goods, under the assumptions that such a distinction can be made and that shifts in demand for nontradable goods in response to a change in the price of tradable goods are negligible.

Morgan Guaranty, in its recently developed broad index, employs a slightly different modified bilateral weighting scheme for exports, which does not incorporate third-country effects as fully as the EC and OECD measures do. These weights are combined with simple bilateral import shares to obtain a set of trade weights. In this scheme, the export weight for the mark in an index for the dollar is the bilateral share of U.S. exports to Germany, weighted by the share of German sales in the German market (equation 4 in the box). Unlike the EC and OECD procedures, Morgan's weighting scheme omits the role of German producers in third markets in which the United States and Germany compete, al-

though it takes account of U.S. competition with other countries besides Germany in the German market. Moreover, while those measures include U.S. sales in the home market in defining the importance of each market to the United States, Morgan's index uses simple bilateral U.S. export shares.

To compare these alternative weighting schemes with simple bilateral and multilateral weighting schemes in the context of a standard set of currencies, indexes of the dollar's value against the other G-10 currencies were calculated using two modified bilateral weighting schemes, those of the OECD and Morgan Guaranty. These measures display less absolute variation in the dollar's value than do the indexes of the Board staff or the IMF, which use multilateral weights (chart 2). The index based on Morgan Guaranty's weighting scheme closely parallels the simple bilateral index, which is not surprising given that it uses simple bilateral weights for imports and that its modified bilateral export weights only partially capture third-country effects. (Recall that indexes based on bilateral trade shares show smaller swings in the dollar's value because they assign a larger weight to the Canadian dollar.) The OECD construct tells a different story, suggesting that more than 80 percent of the dollar's appreciation after late 1980 had been reversed by the end of 1986. This result stems from the larger weight assigned to the yen in the OECD scheme, as the depreciation of the dollar against the yen has more than reversed the rise after late 1980, in contrast to its movements against other G-10 currencies. The larger weight of the yen in the OECD weighting scheme apparently indicates a sizable role for Japanese firms as competitors in their home markets and in U.S. markets, as well as with the United States in third markets.

When the object of analysis is something other than trade, the optimal theoretical weights are different. In a weighted average index of the dollar's value focusing on the influence of changes in exchange rates on import prices, the weight for, say, the mark reflects the bilateral share of U.S. imports from Germany, the price sensitivity of U.S. demand for German goods, and the sensitivity of the profit margins of German exporters to a change in the mark-dollar bilateral rate. The weight depends, in addition,

### 2. Exchange value of the dollar against the G-10 currencies, alternative trade weights

Monthly series. Percentage changes are computed logarithmically. The IMF index, OECD index, and Morgan broad (modified bilateral) index were renormalized to obtain indexes for the G-10 alone based on each weighting scheme.

on the bilateral shares of U.S. imports from other countries and on the sensitivity of import prices for these goods to a change in the mark-dollar rate. These influences introduce the same type of third-country considerations raised in the discussion of the trade-volume case. However, because empirical evidence suggests that import prices of French goods, for example, are affected little by changes in the mark-dollar exchange rate, simple bilateral import shares generally are regarded as acceptable weights for applications involving import prices.

If the objective, more generally, is to assess the influence of changes in exchange rates on U.S. consumer prices, then imports from Germany as a share of U.S. consumption, rather than as a share of the volume of U.S. imports, appear in the weight along with the relevant price sensitivities described above. In addition, to capture the way changes in exchange rates affect consumer prices indirectly through their influence on the price of competing domestic goods, the weight should depend on the share of domestically produced tradable goods in U.S. consumption and the price sensitivity of demand for these goods.

Still other factors matter in other analyses. Take asset demands: the degree to which they respond to changes in exchange rates depends on  Nominal and real exchange value of the dollar against the G-10 currencies, multilateral trade weights

Monthly series. Percentage changes are computed logarithmically. Indexes use 1972-76 average weights; the real index is adjusted with the CPI.

their sensitivity to changes in expected rates of return, including the change attributable to expected rates of change in exchange rates. In a weighted average index used as a source of information about monetary conditions, the weights should reflect these same sensitivities as well as the currency composition of asset portfolios. In the absence of these data and reliable estimates of these parameters, some regard weights based on gross national product as a good proxy.

#### Real versus Nominal Indexes

As noted previously, a real exchange-rate index is appropriate for examining the effect of changes in exchange rates on trade developments. However, because most standard price measures are available at best monthly, daily movements in nominal exchange-rate indexes often are used as a proxy for changes in real or price-adjusted measures over short intervals. For indexes of the dollar's value against the G-10 currencies, this practice is valid; these measures display about the same behavior in real and nominal terms, reflecting the similarity in inflation rates in the United States and the foreign G-10 economies, on average (chart 3).

In contrast, the nominal value of the dollar against the currencies of certain developing countries behaves quite differently from its real counterpart. Chart 4 depicts the dollar's value in terms of the currencies of eight key developing-country trading partners of the United States: Brazil, Hong Kong, Malaysia, Mexico, the Phil-

Monthly data. The eight countries are Mexico, Brazil, Hong Kong, Malaysia, the Philippines, Singapore, South Korea, and Taiwan. The real index is adjusted with the CPI.

ippines, Singapore, South Korea, and Taiwan. Although the dollar has appreciated several hundred percent in nominal terms against a multilateral trade-weighted average of these currencies since late 1980, its real appreciation is much smaller because of the enormous rates of inflation in Mexico and Brazil.

Thus, if it includes the currencies of countries with very high rates of inflation, a nominal index of the dollar's value will present a particularly misleading picture of changes in U.S. price competitiveness; this point can be seen by contrasting the behavior of the original index compiled by the Federal Reserve Bank of Dallas, which

5. Indexes of the weighted average foreign-exchange value of the dollar

Percentage changes are computed logarithmically.

includes the currencies of virtually all U.S. trading partners, with that of the more traditional indexes as well as the recently developed index of the Federal Reserve Bank of Atlanta (chart 5). Although the Atlanta Bank's index also includes the currencies of some developing countries, these are mainly newly industrialized countries in Asia, whose inflation rates are not appreciably different from those in the United States. (Subsequently, the Dallas Bank developed a real index for the dollar that includes the currencies of 101 U.S. trading partners.)

#### Alternative Real Exchange-Rate Indexes

For applications involving real indexes, one issue is which price index to use as a deflator. None of the standard measures is ideal for assessing changes in U.S. competitiveness; each has advantages and disadvantages, both theoretical and empirical. Consumer prices provide a broad measure of the prices of domestic finished goods and services, and they are available on a relatively consistent and timely basis across countries. However, they include the prices of some nontraded items, such as housing and a wide range of services. Indexes of wholesale prices focus more narrowly on the goods sector, but their coverage can vary substantially across countries. In particular, in many countries these indexes give heavy weight to the prices of basic commodities and therefore imperfectly reflect underlying domestic manufacturing costs and output prices. Furthermore, for some developing countries that might be considered in a broader index, these standard measures of domestic consumer and producer prices may be biased downward by the presence of price controls.

Export prices capture the prices of goods actually traded, but they exclude the prices of potentially tradable goods, such as domestic import substitutes. Moreover, to the extent that firms price in the short run to meet competition in foreign markets, varying profit margins to absorb fluctuations in exchange rates, short-run changes in export prices will not mirror changes in underlying cost and price pressures. Unit labor costs reflect a major component of domestic production costs, while avoiding measure-

ment problems associated with fluctuations in profit margins in response to changes in exchange rates. However, they have some important drawbacks as a gauge of competitiveness: they omit other components of production costs such as costs of capital and material inputs, and thus their use overlooks longer-run changes in their relationship to output prices. In view of the deficiencies of each of these individual measures, more than one real exchange-rate measure should be used for assessing competitiveness.

#### Currency Coverage

If the focus of attention is how exchange rates influence trade and inflation, then currencies of countries with either a significant share in world trade (if multilateral weights are used) or U.S. trade (under a bilateral weighting scheme) are candidates for inclusion in the index. For applications involving asset demands, the index should encompass countries whose assets are widely traded in financial markets.

In addition to these theoretical criteria, several practical considerations arise. First, countries included should have well-developed foreignexchange markets. When developing countries use multiple exchange rates, determining the appropriate exchange rate for inclusion presents difficulties. Second, currencies linked directly to currencies in the index as a result of policy decisions about exchange rates may be omitted provided the weights are appropriately adjusted. In general, so long as the excluded currencies move in close parallel with the currencies in the index, their absence will not appreciably affect the behavior of the index or its usefulness in forecasting other macroeconomic variables. When the application involves real exchange rates, movements in the real value of currencies omitted from the index should be highly correlated with those of currencies in the index.

A comparison between an index of the OECD currencies and one for the G-10 alone offers an illustration (chart 6). The nominal indexes move in parallel because of the relatively small trade shares of those OECD countries that are not among the G-10 and because several of those

currencies are linked to the G-10 currencies. The difference in the movements in nominal exchange rates in the G-10 countries and in the OECD countries that are not in the G-10, which accounts for the spread in the top panel of the chart, largely reflects different inflation experiences; thus the similarity in the behavior of these indexes is even more striking on a CPI-adjusted basis, as shown in the bottom panel.

In contrast, an index of the dollar's value in terms of a weighted average of the currencies of certain developing countries behaves much differently from an index based on the G-10 currencies alone. Take for illustration an index of the dollar's value against the currencies of eight key developing-country trading partners of the United States. Together, these countries account for about 35 percent of world trade by nonindustrialized countries, and in 1978-83 they accounted for the largest shares of U.S. non-oil imports from nonindustrialized countries outside the Organization of Petroleum Exporting Countries. (Recently, the importance of countries that are large producers of primary products, such as Malaysia and the Philippines, has diminished.) From early 1985 through the fourth quarter of 1986, the dollar appreciated about 3 percent in real terms against an index of the currencies of these eight countries weighted by multilateral trade; by contrast, it declined about 40 percent in

 Indexes of the exchange value of the dollar, multilateral trade weights

Quarterly data. Indexes use 1978-83 average weights. The real index is adjusted with the CPI.

real terms vis-à-vis a comparably weighted average of the G-10 currencies (chart 7).

This overall figure belies substantial differences in movements in the dollar's real value against the individual currencies of these developing countries. None of the Asian currencies, except the Philippine peso, changed much against the dollar on a CPI-adjusted basis from the first quarter of 1985 through the fourth quarter of 1986. Inasmuch as the inflation rates in these countries are broadly similar to that in the United States, this relative stability in exchange rates reflects the policy in many of these countries during this period of essentially pegging the currency to the dollar's value, with periodic adjustments in the peg. One prominent example of a sliding peg is the Taiwan dollar, which appreciated 5 percent in real terms against the dollar during this period. Political pressure to appreciate its currency developed as Taiwan amassed large current account surpluses and foreign exchange reserves. The Philippine peso, in contrast, depreciated about 13 percent on a CPI-adjusted basis against the dollar from the first quarter of 1985 through the end of 1986 as a

7. Indexes of the real exchange value of the dollar

Quarterly data. Percentage changes are computed logarithmically. Indexes use 1978-83 average weights.

result of several factors: an attempt to rectify the real appreciation of the peso during the previous two years; the difficulties the Philippines has had in servicing its international debts; and the growth in trade of many other Asian countries in the index.

Among the Latin American currencies, the Mexican peso depreciated more than 50 percent in real terms against the dollar from the first quarter of 1985 through the fourth quarter of 1986 as Mexico corrected the real appreciation of the peso in 1984-85 and adjusted to the loss in revenues resulting from the fall in oil prices. The Brazilian cruzado, on the other hand, appreciated nearly 15 percent on a CPI-adjusted basis against the dollar from the first quarter of 1985 through the fourth quarter of 1986. (This figure understates the actual appreciation of the cruzado in real terms because price controls introduce a downward bias in the Brazilian CPI.) Following the rapid depreciation, in parallel with inflation, of the cruzeiro, the predecessor currency, the cruzado was introduced in February 1986. Throughout most of 1986 the nominal value of the cruzado was pegged to the dollar as part of the Cruzado Plan, which was intended to check inflation expectations. With the nominal value of the cruzado fixed or experiencing only minidevaluations, while inflation was much more rapid in Brazil than in the United States, the real value of the cruzado in terms of the dollar rose.

To compare the performance of a broader index of the dollar's value with that of an index based on the G-10 currencies, alternate indexes that include the currencies of these eight developing countries along with those of the G-10 were constructed using two different sets of weights: multilateral trade weights and bilateral U.S. non-oil import weights. (The construction of these indexes is described in the appendix.) According to an index with multilateral trade weights (the upper panel of chart 7), the real dollar depreciated nearly 30 percent against a weighted average of the currencies of all 18 countries from the first quarter of 1985 through the fourth quarter of 1986, in contrast with a decrease of almost 40 percent vis-à-vis the G-10 currencies alone. With bilateral non-oil import weights (the lower panel of chart 7), the index shows a decline in the real value of the dollar of about 20 percent against the currencies of the 18 countries, versus 30 percent against the G-10 currencies alone. Overall, the more comprehensive indexes indicate that roughly two-thirds of the dollar's rise from the fourth quarter of 1980 had been reversed by the end of 1986, compared with the three-fourths or more that the narrower indexes indicate (see table 1). Since the end of 1986, the dollar has depreciated further in general, but particularly against the yen and European currencies.

### FORECASTING PERFORMANCE OF ALTERNATIVE INDEXES

The inclusion of a representative sample of currencies of developing countries in an index of weighted average exchange rates tends to reduce the proportion of the dollar's rise in the first half of the 1980s that has been reversed. The ultimate question, however, is whether a broader index can better account for and forecast movements in the U.S. trade balance and import prices. For insight on this question, the performance of alternative indexes was evaluated in the context of equations used by the Federal Reserve Board staff to forecast the volume of nonagricultural exports and the prices of nonagricultural exports and non-oil imports. This investigation examined indexes of the dollar's value against the currencies of eight developing countries and the G-10 and, alternatively, an index of the G-10 currencies alone weighted by multilateral trade. For non-oil import prices, the broader indexes were based on multilateral trade weights and bilateral non-oil import weights, as constructed in the manner described above. For nonagricultural export volume and prices, these indexes were based on multilateral trade weights and bilateral nonagricultural export weights. The tests did not include other components of U.S. trade flows because (1) the volume of oil imports is not particularly sensitive to changes in exchange rates, according to empirical studies; (2) in the equations used by the Board staff, exchange rates affect the volume of non-oil imports only indirectly, through import prices; and (3) extensive subsidies and restrictions in markets for agricultural products complicate the modeling of agricultural exports.

1. The underlying equations were estimated from 1966 through 1983, and the prediction errors were calculated for 1984 and 1985. The multilateral weights are shares of total trade. The bilateral weights are shares of U.S. non-oil imports for the non-oil import price equation and shares of U.S. nonagricultural exports for the nonagricultural export volume and price deflator equations.

Over the whole sample period, from 1966 to 1985, the overall fit of the equations for all three variables differed little across the three indexes; the estimated parameters essentially adjust so as to offset the reduction in the depreciation of the dollar during the recent period exhibited by a broader index.

An evaluation of the forecasting performance of the indexes is presented in table 2. For this analysis, the estimation period was truncated to provide an out-of-sample test. For the prices of nonagricultural exports, the three indexes performed similarly. However, the broader measures substantially improved the predictions for the prices of non-oil imports and the volume of nonagricultural exports, reducing the average absolute forecast error significantly (compare columns 2 and 3 with column 1). Moreover, the improvement in the forecast during this period is greater when an index based on bilateral non-oil import shares is used for predicting import prices and when an index with multilateral trade weights is used for predicting export volume.

#### **CONCLUSION**

In summary, no single measure of weighted average exchange rates is suitable for all purposes. The appropriate measure for each application should reflect the unique way changes in bilateral exchange rates affect the variable of interest. Several important macroeconomic applications serve as illustrations here, but weighted average exchange rates have many other uses. If, for example, the outlook for U.S. exports of steel is at issue, it seems reasonable that only the currencies of countries that are large steel producers rather than some other set of U.S. trading partners, should be included in the index. In principle, a myriad of such applications exist, each requiring a different index of weighted average exchange rates.

### APPENDIX: CONSTRUCTION OF INDEXES OF THE DOLLAR'S VALUE AGAINST THE CURRENCIES OF THE G-10 AND EIGHT DEVELOPING COUNTRIES

Initially, the individual currencies of the Group of Ten countries and eight developing countries are assigned weights based on 1978-83 average multilateral trade shares, bilateral non-oil import shares, or bilateral nonagricultural export shares. Because the G-10 countries account for roughly 60 percent of world trade by industrial countries while the eight developing countries account for only 35 percent of world trade by nonindustrialized countries, the weights of the various currencies are adjusted so that the two

samples reflect the proportions of world trade, U.S. non-oil imports, or U.S. nonagricultural exports accounted for by industrialized and non-industrialized countries respectively. For example, the weights for each of the G-10 currencies are renormalized to sum to the 78 percent share of world trade accounted for by industrial countries (for the index with multilateral trade weights) and the 71 percent share of U.S. non-oil imports from industrial countries (for the index based on bilateral non-oil import weights).

The alternative weights are displayed in table A.1. For comparison, the weights currently used in the index compiled by the Federal Reserve Board staff are presented in column 1; column 2

shows these weights based on 1978-83 average global trade shares. The weights for the broader indexes constructed here are presented in columns 3, 4, and 5.

### **Industrial Production**

### Released for publication April 15

Industrial production declined an estimated 0.3 percent in March, reflecting widespread reductions in output. Revised levels now indicate a decline of 0.1 percent for January, while the gain in February remained at 0.5 percent. The average level of production in the first quarter of 1987 was 2.6 percent higher, at an annual rate, than it

was in the fourth quarter of 1986. However, the level of output in March 1987, at 126.7 percent of the 1977 average, was essentially the same as it was in December 1986.

In market groupings, production of durable consumer goods declined about 1 percent in March, reflecting a cutback in output of motor vehicles and a further reduction in home goods such as appliances. Autos were assembled at an

All series are seasonally adjusted. Latest figures: March.

NOTE. Indexes are seasonally adjusted.

annual rate of 7.9 million units—down from a rate of 8.3 million units in February. Nondurable consumer goods also were off in March, owing largely to reduced production of apparel and consumer fuels. Output of business equipment declined 0.4 percent as reductions in manufacturing, power, and transit equipment were only partially offset by gains in output of farm equipment, which continued to rebound from strike-affected levels. Following strong growth in 1986, production of construction supplies slowed in the first quarter of 1987. Output of supplies for both construction and business declined in March.

Production of durable materials decreased during the month despite some strike-related comeback in steel. Output of nondurable materials, which had been rising quite rapidly in 1986 and early 1987, edged down in March for a second month.

In industry groupings, manufacturing output decreased 0.2 percent in March after a gain of 0.6 percent in February. The motor vehicle industry as well as construction-related industries such as lumber and stone, clay, and glass shared in the decline along with electrical machinery and transportation equipment. Nondurable manufacturing was off 0.3 percent, and mining—particularly coal—also declined. Output at utilities edged up in March.

### Statements to Congress

Statement by Paul A. Volcker, Chairman, Board of Governors of the Federal Reserve System, before the Subcommittee on International Finance and Monetary Policy, Committee on Banking, Housing, and Urban Affairs, U.S. Senate, April 7, 1987.

I welcome the opportunity to appear before you today to review some aspects of the world economic situation. In particular, you asked me to concentrate on exchange market developments and international debt. These issues are in turn related to the overall functioning of the world economy. Indeed, I would argue that the problems of economic growth, balance of payments adjustment, protectionism, and international debt are so intertwined today that a failure to deal constructively with any one of them would risk failure across the board.

#### INSTABILITY IN EXCHANGE RATES

So far in this decade we have experienced tremendous swings in the value of the dollar. Measured in terms of a multilateral trade-weighted average against the currencies of the other Group of Ten (G-10) countries, the dollar's value rose about 80 percent from 1980 to the first quarter of 1985. It has since retraced most of that rise and is now at a level only about 10 percent above its average in 1980 when our current account was close to balance.

Large swings in exchange rates among industrialized countries over periods of several years were also characteristic of most of the 1970s. However, if anything, the fluctuations have appeared to become greater, rather than less, as the period of floating rates has been extended.

In themselves, such wide swings in exchange rates are troublesome. When exchange rates among nations fluctuate much more widely than relative changes in domestic prices, productivity, and other basic economic variables, economic units producing internationally tradable goods receive misleading price "signals" over time. Investment decisions may be distorted, and individual firms and workers can be whipsawed by fluctuations in price competitiveness internationally. For the economy generally, deflationary or inflationary impulses may complicate the task of economic management and affect the stability of financial markets.

However, it does little good merely to rail against excessive fluctuations in exchange rates without being prepared to do something about them. And that "something," in the end, involves appropriate national economic policies and reasonable consistency and complementarity among the policies and performance of major nations. In fact, national policies during much of the 1980s have, in important respects, diverged in ways that put pressure on exchange rates and distorted trade positions, even though inflation rates have tended to converge at much lower levels.

For one thing, the U.S. federal budget deficit was high and rising as budget deficits in other countries were being reduced. For several years, growth in the United States was substantially stronger than elsewhere and our interest rates were relatively high. Although U.S. growth overall has since slackened, expanded consumption has depressed further our chronically low personal saving rate.

As a result, there have been strong incentives for a flow of capital from abroad into the United States. For a time, that flow pushed up the dollar, and that strength was probably amplified by more speculative forces. The result of the strong dollar and of our relatively rapid growth in domestic demand was a sharp deterioration in our international competitive position and in our trade and current accounts.

The rising trade deficit, lower interest rates, and slower growth have all worked in the direction of reducing dollar exchange rates over the past two years. Relative to the Japanese yen and the German mark, the dollar is at, or close to, alltime lows.

No doubt a sizable realignment of currency values has been a necessary part of the process of restoring better balance to our trade and current accounts. Moreover, I believe sustained economic growth and financial stability in the United States over the next few years are importantly dependent on improvements in our trade balance. But I do not believe we can be successful in that effort if we fail to recognize the importance of factors other than exchange rates in redressing our trade balance. There are clear dangers in relying too much on exchange rates alone.

The hard fact is that we have been spending more at home than we have been producing about 3½ percent more last year. The decline in the dollar has provided incentives for more exports and for less imports. But if we are to improve our trade balance, and do so with a minimum of inflationary pressures, we will also have to slow the growth of spending at home, particularly for consumption. We want to maintain investment. However, we will have to achieve a better balance between that investment and domestic savings if we are to be in a position to dispense with foreign capital. In terms of laying the groundwork for future growth, progress in making these adjustments seems to me more important than achieving a particular rate of growth overall this year.

The constructive way to work in the needed direction would be to reduce our budget deficit, year by year, paving the way for improvements in our trade accounts. In contrast, looking toward depreciation of the dollar alone to improve our trade balance would clearly pose substantial risks of renewed inflationary momentum and undermine confidence in future financial stability—developments that could jeopardize prospects for sustained economic expansion. You are well aware that some warning signs of just such developments have appeared in recent weeks.

I know of no reliable way of judging now whether several years ahead the dollar vis-à-vis other currencies will ultimately need to be higher or lower, consistent with restoration of a sustainable trade position. Too much depends upon other important factors and policies affecting relative growth and competitive performance here and abroad. What we do know is that a substantial adjustment in the exchange rate has already been made. That adjustment should be large enough, in a context of a growing world economy and fiscal restraint in the United States, to support the widespread expectations of a narrowing in the real trade deficit in the period ahead. There are indications that the volume of our exports is now growing substantially, and some slowdown in the growth, or even a decline, in the volume of imports seems possible this year. *In real terms*, the deficit in our trade narrowed in the fourth quarter of last year.

Whether, and how soon, improvement in the real trade balance this year will be accompanied by a reduced trade deficit in dollar terms—the data published each month—is more problematical. The trouble is that higher dollar prices of imports as the dollar depreciates—the well-known "J-curve" effect—might offset improvement in the volume of net exports for some time. That phenomenon itself points to one of the dangers of looking to depreciation of the dollar alone to deal with the trade problem: it generates inflationary pressures and could actually prolong J-curve effects, perhaps, raising more doubts about our ability to finance our current account deficit.

Prospects for achieving solid and steady improvement in our external trade—and doing so in a context of sustained world growth—is critically dependent upon the strength of markets abroad, and on whether they are open to us. Unfortunately, the evidence on that score is not entirely favorable.

Specifically, growth of real gross national product in foreign G-10 countries on average slowed to about 2½ percent last year (fourth quarter to fourth quarter), almost ½ percent less than in 1985. To be sure, much of that slowdown reflected reduced export growth rather than reduced domestic demand. But clearly, domestic expansion in those countries was not enough to offset the effects of the trade adjustment. And the clear danger now in most other industrialized countries is that growth may be slowing further.

In that kind of situation, further sizable depreciation of the dollar could well be counterproduc-

tive. It will take time and other policy changes both here and abroad to achieve the shift in resources necessary to achieve better international balance. Excessive volatility in exchange rates could jeopardize, instead of speed, the process by further impairing prospects for investment and growth in the surplus countries.

That, I believe, is the sense of the understandings reached among the leading industrial countries in Paris in February, looking toward greater stability of exchange rates around current levels. Those understandings have been reflected in active intervention in the exchange markets in recent weeks. But intervention, taken alone, is of course a limited tool.

Confidence in the current exchange rate levels will, in the end, depend upon perceptions that more fundamental policies than intervention will in fact be brought to bear. I have emphasized the need for complementary changes in fiscal policies in the United States, Germany, and Japan. The conduct of monetary policy, here and abroad, will be relevant as well. The performance of the dollar in the exchange market might become a factor bearing on our provision of reserves; I should think our central banking colleagues abroad may wish to take account of such circumstances as well.

In sum, we plainly do want, and need, improvement in our trade balance. There are some encouraging signs in that respect. But there are also practical limits as to how fast the necessary massive shift in resources can be accomplished if the momentum of world expansion is to be maintained. Undercutting investment and growth abroad at a time when growth prospects are already relatively weak is neither in their interest nor in ours. Undercutting our own prospects for price and financial stability by a weak dollar is equally unattractive.

What we need now, instead of more depreciation, is action here and abroad to carry through on those other measures needed to support growth and adjustment—specifically action to reduce the budget deficit here and to provide stimulus abroad. We need time for those actions and the earlier depreciation to work their effects. And we need the patience to see it through, without embarking on self-destructive protectionist policies.

### THE WORLD DEBT SITUATION—PROGRESS AND PROBLEMS

Patience is difficult enough for rich countries like the United States; for the heavily indebted countries of the developing world, the plea wears thin without supportable prospects for greater economic growth and stability. In that connection, I do not share the sense of some that radical new approaches to the debt problem are necessary or practicable—indeed, writing down and forgiving debts that can reasonably be serviced would risk undermining growth and stability in the borrowing countries. But I also believe that we would be blind to fail to recognize shortcomings in implementing present approaches.

Specifically, there is clearly a danger that adequate financing arrangements are not being negotiated and put in place in a timely way. Borrowing countries that have demonstrated their intent and ability to carry out effective economic programs need to be able to proceed with confidence that necessary funds will in fact be available to support those programs.

More broadly, sluggish growth in the industrialized world has affected the export markets of the heavily indebted countries, slowing their return to full economic and financial health. For a while, in 1983 and 1984, as the United States led world recovery, markets of the borrowing countries expanded at a rapid pace. Then the growth rate for industrialized countries dropped to 3 percent in 1985 and to less than 2½ percent last year. As things stand, prospects are no better—and perhaps worse—in 1987. Taking the whole period since 1982, Europe and Japan have increased their imports from Latin America very little. Plainly, it is in our collective interest, as well as that of the indebted countries, to do better.

Meanwhile, my sense is that there has been too little appreciation of how much progress the heavily indebted countries themselves have made toward laying the groundwork for renewed and more sustainable growth. To take one key measure of adjustment, the combined current account deficit of the so-called Baker-15 countries declined from the \$50 billion range in 1981–82 to essentially zero in 1984–85. The aggregate deficit widened again about \$10 billion in 1986,

but that almost entirely reflected the decline in oil and other commodity prices. Even under those circumstances, the deficits have collectively been within the amounts envisaged when Secretary Baker outlined the "Program for Sustained Growth" in Korea in 1985. At the same time, capital flight in most borrowing countries has tended to slow; it has even reversed in some.

Reflecting those factors, growth in the external debt of the most heavily indebted countries has slowed sharply, averaging less than 3½ percent a year in dollar terms since 1982. With reasonable rates of economic expansion both in the borrowing countries and in the world at large, that rate of increase in external debt should be manageable and consistent both with declining debt burdens for borrowers relative to gross domestic product or exports and with reduced exposures of lenders relative to their capital and assets.

I realize neither world growth nor growth by borrowing countries has recovered to "pre-crisis" levels. Nonetheless, along with the progress in external adjustment, many of the major borrowing countries have also experienced significant recovery in economic activity. A few—Brazil, Chile, Colombia, and Morocco—have achieved a substantial pickup in economic growth, averaging more than 4 percent per year during the past three years. For the 15 heavily indebted countries as a group, real GNP has grown some 8.8 percent since 1983.

Measured against the performance of the 1970s, when foreign finance was so freely available, or against prospective needs, the improvement in economic activity, employment, and living standards has not been satisfactory. But a full measure of success by those criteria was hardly possible in so short a period of time. Plainly, the earlier amounts of lending from abroad are simply not available today. Instead, some fundamental economic adjustments have been required to build a more solid foundation for sustained growth.

Naturally, the degree of success in making those adjustments has varied from country to country. In difficult economic and political circumstances, punctuated by natural disasters and external shocks, some setbacks have been inevitable. But what is so striking overall is the amount of progress that has been achieved.

In country after country, fiscal deficits are under better control than they were at the beginning of the decade. Chronically overvalued exchange rates have been brought into more realiscompetitive alignments, enabling industries to compete more effectively in world markets. At the same time, the exchange rate and fiscal changes have helped create conditions in which the borrowing countries could be more open to international competition—quantitative import restrictions, licensing requirements, and tariffs have, on balance, been reduced. Other efforts are under way to limit the role of the state in the economic system by cutting back on subsidies, credit allocation, and in some instances public ownership of industry.

One area that has been squeezed that reflects adversely on future prospects is investment. That points up the need for some margin of fresh funds from abroad to support growth. The provision of such funds from both public and private sources has been, of course, one of the basic elements of the "Baker Plan."

Both the International Monetary Fund (IMF) and the World Bank have played important roles in that respect. In particular, the World Bank over the past year, complementing the efforts of the Fund, has embarked on an ambitious program to define and to support financially structural changes that would provide a basis for debtor countries to resume more vigorous economic growth. This program has entailed an intensive process of consultation with each of the largest indebted countries to develop policy approaches that are both strategically important for improving economic efficiency and politically feasible.

During the past two years, the most significant structural changes adopted by the major indebted countries have been in the area of trade policy. Nigeria, Mexico, Chile, Colombia, and Ecuador have each taken steps to liberalize their import restrictions—and at the same time, have been able to achieve impressive growth rates for their nontraditional exports. In other instances, huge credit subsidies to agriculture or other sectors have been reduced while other measures have been taken to enhance the efficiency of those sectors.

Overall, disbursements by the World Bank and

the regional development banks to the "Baker 15" countries increased to \$7½ billion in 1986, almost 40 percent above the rate of 1983–85. Disbursements should increase further this year to the levels envisaged by the Baker Plan. These institutions will certainly provide a substantially larger proportion of new funds flowing to Mexico and other heavily indebted countries than in earlier years.

Both governmental and private lenders have restructured outstanding debts of the borrowers, and interest rates on many bank credits have been negotiated downward. More importantly, world interest rates have declined in both nominal and real terms. As a result, the burden of external interest payments has been falling despite some increases in debt.

From the perspective of the commercial bank lenders, progress has been more striking. Exposure to the heavily indebted countries relative to their capital bases has declined sharply. For all U.S. banks, the ratios of such loans to capital have by now declined almost 50 percent. Relative exposure of foreign banks has probably declined even more since 1982 as a result of the depreciation of the dollar.

That progress is welcome in terms of the implications of reduced financial pressure on lenders and borrowers alike. However, there is another side to the coin. The heavily indebted countries need to be able to count on receiving in a timely way those funds that are reasonably necessary to support well-conceived economic programs—and, in particular, necessary levels of domestic investment. Available data suggest that net new commercial bank lending virtually ceased in 1985 and 1986 and certainly was below amounts assumed in the approach outlined by Secretary Baker.

Part of the difficulty has been the length of time required to negotiate and syndicate the large new Mexican loan—the gestation period is now approaching nine months. Underlying the delay in that instance and others have been evident differences in viewpoint and emphasis among banks—those with large exposures as against those with limited exposures, those in one country as against those in others, those with continuing interests in international lending and those who want to withdraw.

While differences in approach and priority are natural, and have been present from the start, what is disturbing to many bankers and borrowers alike is the increasing difficulty in arriving at a consensus, and once reached, implementing that consensus effectively and speedily. What has been lacking is the sense of urgency and willingness to cooperate in the larger general interest that was so evident in 1982 and 1983. The irony is that it is precisely a failure to arrive more expeditiously at mutually satisfactory financing agreements that may be the greatest threat to the success of the overall effort. In some instances, doubts about financing undermine the resolve to carry out needed economic reforms. And an environment of successive financing crises can hardly be in the interests of the banking community itself.

Fortunately, a sense of renewed effort and commitment seems to be emerging. Restructuring agreements were recently completed with Venezuela and the Philippines and financing arrangements with Chile modified, in each case after months of discussions. Initiatives are under way among U.S. regional banks, looking toward the development of innovative approaches to broaden the choices of banks in structuring their participation in new financing programs. Discussions among banks at an international level should help deal with points of friction.

In all these discussions, the issue of "free riders" will need to be dealt with effectively; the cohesion of the entire effort will be undermined to the extent that some creditors "opt out" of participation in new credits or restructurings while continuing to receive interest and principal payments.

The success of all this renewed effort is being tested in important negotiations with Argentina. That country is among those that are making substantial progress in recent years toward greater domestic stability and restoring growth, despite its heavy dependence on severely depressed world grain markets. Argentina has been working closely with the IMF for several years, and the World Bank is prepared to provide additional financing to support sectoral reforms. But it is also clear that restructuring of outstanding loans and some margin of new credit will be necessary to support growth and to maintain

continuity in debt service. Early agreement on those matters seems to me obviously in the interests of Argentina and lenders alike, providing a base for greater confidence that their objectives—some common and some different—can be reached.

The largest developing country debtor—Brazil—is obviously in a difficult position today. After a period of strong domestic growth and large trade surpluses, strong inflationary forces again developed, the external position deteriorated, and the momentum of expansion has been interrupted. In the circumstances, with international reserves rapidly falling, the government suspended servicing medium- and longer-term bank debt.

Given its enormous human and material resources, Brazil clearly has the potential for becoming one of the world's leading economic powers; its competitive strength, vitality, and adaptability have been demonstrated again and again in recent years. At the same time, as for any country, realization of that potential over an extended period will clearly be dependent upon both consistent and effective economic policies at home and strong and harmonious trade and financial relationships with other countries.

As a practical matter, the necessary regularization of external payments by Brazil will take concerted effort. The key prerequisite is clearly in the hands of Brazilian authorities—shaping an economic program that commands the support and confidence of Brazilians themselves and the world community. Given that base, both Brazil and its creditors, official and private, seem to me to have the strongest kind of incentive to work together to develop external financing arrangements consistent with strong and sustained growth.

#### **CONCLUSION**

In more general terms, that is, of course, the challenge for all the heavily indebted countries and their creditors. It seems to me a challenge that will continue to be approached best case by case, taking account of the different circumstances and problems of each country. But there are, of course, common needs that run through all the particulars.

First, a successful approach needs to be premised on the requirements for growth. That is not simply a matter of providing external financing, critical as that may be at the margin. It is, first of all, a matter of the intelligent design of effective domestic programs.

Second, sustained economic growth, and the growing imports and exports that are an indispensable part of that process, is importantly dependent on access to world financial markets. Continuity in debt service and negotiated settlements are critically important in maintaining those relationships.

Finally, success in the common effort will depend upon growing and open markets in the industrialized world. That responsibility plainly lies mainly with the United States and its principal trading partners.

It is an effort that, in my judgment, needs to be reinforced by appropriate fiscal and other policies here and abroad. It is an effort that would be placed at risk by excessive instability in exchange rates. And it is an effort that would be undermined entirely by a retreat into protectionism.

I trust that we will have the collective will and wisdom to take those steps that are necessary and to reject those that could only be counterproductive. Too much is at stake to do otherwise.

Statement by Martha R. Seger, Member, Board of Governors of the Federal Reserve System, before the Subcommittee on Consumer Affairs of the Committee on Banking, Housing, and Urban Affairs, U.S. Senate, April 21, 1987.

I appreciate the opportunity to appear before this subcommittee to discuss the legislation that has been introduced to require price and term disclosures in credit card applications and solicitations and to establish a nationwide ceiling on credit card interest rates.

All of the disclosure bills that have been introduced (S. 241, S. 242, S. 616, and S. 647) would add an early disclosure requirement to the Truth in Lending Act for credit card plans or open-end

credit plans. Generally, the Board believes in disclosure, and feels it is important for consumers to have adequate information to shop for credit. In considering specific disclosure legislation, such as that before the subcommittee, the Board is guided by several basic principles. First, early disclosure rules should be structured to provide consumers with essential information, without overloading them with less important information or unnecessarily raising creditor costs. Second, the legislation should limit creditors' compliance costs by providing adequate time to comply with any new disclosure rules. Third, any requirements that are adopted should apply evenhandedly to all competitors.

The credit card interest rate bills would limit the interest rate charged on any credit card transactions. S. 242 would limit the credit card interest rate to 4 percentage points above the rate established under section 6621 of the Internal Revenue Code, and S. 647 would limit the rate to 6 percentage points above the average Federal Reserve discount rate for the six-month period preceding the determination. The Board does not believe it would be appropriate to impose a federal ceiling on credit card rates. Among other things, a federal ceiling could have undesirable side effects in the form of reduced credit availability and could lead to changes in nonrate credit card terms.

#### **CURRENT LAW**

Currently, the truth in lending law requires early disclosures for open-end credit plans and credit cards only when creditors engage in advertising. Solicitations for credit card accounts are thus subject to some truth in lending disclosure requirements, since they are considered "advertisements" under the statute and the Board's implementing regulation, Regulation Z. The creditor must give price information about the credit plan, however, only if certain credit terms are stated in an advertisement. For example, if the creditor advertises the plan's annual fee, the advertisement must state the annual percentage rate, as well as any finance charges that may be imposed.

If none of the specified credit terms are stated

in the solicitation, the law does not require that price and term information about the plan be given at that time. Consequently, while the act, and the Board's regulation, do at times require that consumers receive price information with solicitations, if a card issuer does not advertise certain price information consumers will not necessarily be given this information before they receive a credit card.

Under the current law, consumers must, however, be given full disclosure of the terms and conditions of the credit card program no later than the time that they receive the card. In addition, the regulation provides that a consumer may not be obligated on a credit program before receiving complete disclosures; this would include, for example, the obligation to pay an annual membership fee. Therefore, consumers do have an opportunity to review all of the terms and conditions of a credit card plan before using the card or being obligated to pay an annual fee.

The issue of how much disclosure to require in credit transactions led the Congress to revise the Truth in Lending Act in 1980. At that time, the Congress cut back on the disclosures required in open-end credit advertisements in the hope that reducing the disclosure requirements would promote more advertising, thereby increasing competition.

#### LEGISLATIVE PROPOSALS

The proposed bills go beyond the present law by requiring the creditor to include certain disclosures in applications or solicitations without regard to whether the creditor mentions a particular term. The proposed legislation expands the current statutory requirements for advertising in other ways as well. For example, all of the bills except S. 242 would require creditors to disclose whether or not any time period exists for credit to be repaid without incurring a finance charge a disclosure that is not required by the current advertising rules. Under S. 616, creditors would be required to include a notice in solicitations telling consumers how the balance on which the finance charge is computed is determined. S. 647 would require the disclosure of virtually every charge that might be imposed under an open-end

credit plan, including late payment charges. To the extent that the proposed disclosure requirements might discourage open-end credit advertisements, this legislation could have the unintended effect of decreasing rather than increasing competition. We are inclined to think, however, that if the scope of the increased disclosure requirements in the bills is limited, the legislation would not have this effect. For example, we believe that disclosing the annual percentage rate, annual fee, and grace period in mail solicitations would not be burdensome or complex. Our impression is that many card issuers are already including in their mail solicitations much of this information and, presumably, have not viewed this as an impediment to advertising. Requiring extensive, complex disclosures, on the other hand, may detract from more important disclosures and increase creditor compliance costs.

#### **CONTROLLING COSTS**

Increased disclosure requirements invariably result in some increased costs to the industry. The extent of the compliance costs is largely affected by three factors: (1) the breadth of the coverage of the legislation; (2) the number and complexity of the disclosures required by the legislation; and (3) the amount of time that creditors are given to implement the changes required by the legislation and implementing regulations.

Even though all of the bills have the same goal-to require disclosure for all types of credit cards, including bank credit cards, travel and entertainment cards, and retail cards—the bills are not the same in their scope. S. 241 deals with applications and solicitations for any "credit card account;" S. 242 calls for disclosures in initial applications for a "credit card;" S. 616 requires disclosures in applications and solicitations for "open-end credit card accounts;" and S. 647 calls for disclosures in applications and solicitations for any "open-end consumer credit plan." These different phrases-credit card accounts, credit cards, open-end credit card accounts, and open-end consumer credit plansresult in different credit plans and accounts being subject to the new disclosure requirements. The bills also vary in the number and complexity of the disclosures they require. It is important that the legislation not be broader than necessary to address the concerns of the Congress, and to ensure that compliance costs for any legislation are minimized. For example, if the concern is with credit card solicitations, we would urge that the legislation be limited to those solicitations. We would be glad to work with your staff to ensure that the coverage of any legislation reflects the intent of the Congress.

The Board believes that one way to help control costs is to provide sufficient time for creditors to implement the changes made by the legislation. We believe that the time periods provided in the bills should be lengthened to avoid unnecessary transition costs and burden for creditors.

One final point that I would like to make is that any new disclosure requirements should apply equally to all credit card issuers. One of the bills—S. 647—applies only to banks. We believe that, if additional disclosures are required for credit card solicitations, the requirements should apply equally to all credit card issuers.

#### CREDIT CARD CEILINGS

The Board has commented several times on bills that would set floating ceilings on credit card rates that would supersede generally less restrictive state-imposed limits. The Board has on those occasions stated its opposition to those bills that were very similar to the current interest rate bills—S. 242 and S. 647. In doing so, the Board has endorsed the principle that—as with other types of credit—consumer loans are most fairly and efficiently allocated when there are no regulatory constraints on interest rates. Indeed, the Board has been concerned about the adverse impact that interest rate ceilings can have on the availability of funds in local credit markets and on individuals with limited access to credit.

In response to a congressional request made last year, the Board staff prepared an analysis of the economic effects of proposed ceilings on credit card interest rates. A condensed version of the study, which appeared in the FEDERAL RESERVE BULLETIN, accompanies this statement. (See "The Economic Effects of Proposed Ceil-

ings on Credit Card Interest Rates" in the January 1987 issue, pp. 1-13.) The following comments focus on the Board's major concerns with proposed limitations on interest rates.

An effort to establish a federally mandated ceiling on credit card interest rates would encounter substantial difficulties. From experience with the imposition of credit controls in 1980 and the sharp, unexpected contraction in consumer spending that accompanied them, we know that regulatory measures can have unpredictable and unwanted consequences. Setting a federal ceiling on credit card rates below those that currently prevail in many states would likely reduce the amount of credit made available, forcing consumers to rely instead on less convenient and possibly more expensive substitutes, or to lose access to credit at any rate. Moreover, such a curtailment would be apt to fall most heavily on less affluent borrowers with relatively limited access to other sources of credit. The current ceiling for credit card rates under the proposed bills would be between 11.5 and 12 percent, well below the finance rates that have been typical since credit cards emerged in the early 1960s as a major method of consumer financing.

Furthermore, the imposition of stringent rate ceilings might be countered by a tightening of nonrate credit card terms by card issuers, for example, by increasing annual fees, by levying processing charges on each credit card purchase or cash advance, and by stiffening penalties for late payment or for exceeding the authorized credit limit. Some card issuers also might begin applying the reduced finance charges from the date of purchase, when permitted, rather than after the grace period expires, and might seek to increase the discount fees charged to merchants who submit credit card vouchers to the card issuers for payment.

Turning to the specific provisions of the bills before the Congress, it should be emphasized that credit cards are issued by a broad variety of retail merchants and financial institutions that differ both as to their sources of funding and their liability structures. Under these circumstances, a single index rate would be unlikely to mirror changes in costs for such a diverse array of card issuers. In any case, short-term rates, such as the Federal Reserve discount rate, fluctuate a good

deal more widely than costs of funds of most lenders. They do so because a lender's overall average cost of funds at any point is a blend of current interest rates and rates on previously issued liabilities, and because market rates on longer-term liabilities—which usually make up part of the cost of funds—typically vary less than short-term rates.

If the Congress should nonetheless decide to enact legislation, the Federal Reserve strongly recommends against designating the discount rate as an index for setting ceilings on credit card rates. The discount rate, as you know, is the interest rate charged by the Federal Reserve Banks on extensions of short-term credit to depository institutions. Because it typically applies to very short-term loans, the discount rate is an inexact measure of either marginal or average costs of loanable funds, which may reflect a wide range of maturities. Furthermore, the discount rate is a tool of monetary policy. As such, it is an administered rate that reflects broad policy considerations that frequently are complex and so may deviate from other market rates, even those for instruments of comparable maturity. It would be wrong, in the Board's view, to employ a tool of monetary policy for this purpose.

Another question is whether any regulation of credit card interest rates is more appropriately a matter for federal or for state regulation. The establishment of interest rate ceilings on consumer loans has long been a state prerogative, and one that the Board feels should not be preempted. In recent years, virtually every state has reviewed and overhauled its laws regulating consumer interest rates. After studying the situation in their own jurisdictions, many of these states have opted to raise or remove interest rate ceilings for credit card borrowings. The Board respects the collective judgment of a growing number of states that higher—not lower—ceilings are appropriate to assure that an adequate supply of credit card services is available from lenders located there. Of course, these states retain the authority to lower or restore ceilings if convincing evidence of excessive rates appears.

I would like to reemphasize the Board's conviction that financial markets distribute credit most efficiently and productively when interest

rates are determined in markets that are as free from artificial restraints as possible. Efforts to constrain credit card rates through federal regulation are likely to have undesirable side effects in the form of reduced credit availability, especially for those consumers that these bills would seek to aid. Moreover, these bills may encourage less efficient means of offsetting costs of credit card operations. Accordingly, the Board concludes that it would be inappropriate to impose a federal ceiling on credit card rates.

### REPORTING REQUIREMENTS FOR CREDIT CARD TERMS

I would like to make a final point concerning the proposed credit card legislation. S. 241 and S. 242 require the Board to collect credit card price and term information from all credit card issuers. While our recently completed Annual Percentage Rate Demonstration Project suggests that shoppers guides enhance competition and are useful to some consumers—especially those who are inclined to shop for credit—the Board urges the Congress not to adopt the proposed reporting requirements. There are three reasons for the Board's opposition to these reporting requirements.

First, a variety of shoppers guides for credit cards are currently prepared by consumer groups, general circulation newspapers, including one with national circulation, and other members of the private sector. Second, if the Congress adopts additional disclosure requirements for credit cards, more credit card price and term information will be readily available to consumers. This information can be used by consumers to shop for credit cards and by others to prepare shoppers guides. Last, and possibly most important, the reporting requirements would be burdensome and costly. Even though the burden to individual credit card issuers may not be great, the total cost may be substantial since many thousands of financial institutions and retailers issue credit cards, many credit card issuers offer more than one type of card, and card issuers would be required to report several times a year.

The cost to the Federal Reserve will be substantial. Since the information from the reporting

requirements will be voluminous, a great deal of time will be required to input the information into our computer systems. This data must then be extensively refined to be of value to the public. We anticipate that the list of credit card issuers and their associated price information would be several hundred pages in length. The reporting requirements will also make it more difficult for the Board to meet the objectives set by the Congress in the Paperwork Reduction Act of 1980, since the requirements will result in an increase in the number of reporting hours imposed on the public due to Federal Reserve Board requirements.

### CONDITIONS FOR CHANGING PROVIDERS OF CREDIT INSURANCE

The subcommittee also asked the Board to comment on the appropriate conditions that might be required of banks that choose to change providers of credit insurance. This is a subject that the Board dealt with several months earlier when it revised the rules concerning the ability of bank holding companies to underwrite credit life and credit disability insurance. At that time, the Board was asked to impose specific requirements on bank holding companies if the holding company wanted to change credit life insurance underwriters.

A large credit life insurance company asked the Board to require that any bank holding company changing underwriters of credit life insurance on credit card accounts notify all of the holding company's customers that were purchasers of such insurance of the proposed replacement coverage and of any changes or limitations in the insurance benefits under the new coverage. In addition, the insurance company asked that bank holding companies be required to obtain a new application from each credit card customer with credit life insurance before continuing the credit life insurance coverage with the new underwriter.

The Board declined to adopt the company's proposal when the Board revised its insurance regulation last October. The Board based its decision on the belief that the concerns raised by the credit insurance company are more appropriately handled by the individual states that are

charged with regulating credit life insurance and that set specific rates for such insurance. In addition, the Board believed that the policyholder's contract rights under state law provide adequate protection and that a prior notification requirement would place an unnecessary burden on bank holding companies.

In light of this, the Board does not believe that new requirements for banks that choose to change providers of credit insurance are necessary or appropriate. In fact, imposing a requirement such as soliciting customers for new applications could be so burdensome as to actually preclude banks from changing underwriters.

Statement by Paul A. Volcker, Chairman, Board of Governors of the Federal Reserve System, before the Subcommittee on General Oversight and Investigations of the Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives, April 30, 1987.

I appreciate the opportunity to appear before this committee to discuss the joint proposal of the U.S. federal banking agencies and the Bank of England for the establishment of a risk-based capital framework. As you may be aware, the U.S.-U.K. proposal, as well as the Federal Reserve's implementing guidelines, are still out for public comment. Thus, the final shape of the risk-based framework is subject to revision in light of the public comments and further consideration of the important issues involved.

In developing this proposal, the U.S. and U.K. banking authorities faced a number of difficult supervisory and competitive questions, as well as numerous technical questions. They have been at least tentatively resolved in a process of discussion and reasonable compromise. The net result promises, I believe, a framework for significantly strengthening our current regulatory procedures for assessing capital adequacy. In addition, the U.S.-U.K. proposal constitutes an important concrete step in the direction of greater harmonization and convergence of supervisory policies among countries with major banking institutions.

Concern about capital adequacy stems largely from capital's role as a buffer to absorb unexpected losses that a banking organization's current earnings cannot cover. In so doing, capital reduces the likelihood of bank failures and thereby protects depositors, other bank creditors, and the deposit insurance funds. The protection that bank capital provides also serves to maintain

public confidence in the banking system as a whole.

### CAPITAL TRENDS AND FEDERAL RESERVE GUIDELINES PROGRAM

Throughout most of the 1970s and early 1980s, bank capital ratios, particularly those of the larger banking organizations, declined significantly. During this period, banks were forced to operate in a difficult environment characterized by accelerating inflation, high and volatile interest rates, and a rising incidence of corporate bankruptcies. The deregulation of interest ceilings on deposits and the growing competition in the market for financial services added to these pressures. At the same time, overseas expansion and competition with foreign banks resulted in significant growth in assets for the large international institutions; and in the process spreads between the cost of money and loans tended to narrow. As a result, the declining capital ratios of some of the larger organizations became of growing concern to regulators. Those concerns were reinforced by evidence that risks in the banking system, both domestically and internationally, had clearly increased.

Against that background, the federal bank regulatory agencies first adopted formal capital guidelines in 1981. These guidelines, which set minimum capital requirements based on the ratios of "primary" and "total" capital to total assets, have been modified and strengthened on several occasions since their adoption. At present, all banks and bank holding companies are required to meet a minimum primary capital-to-assets requirement of 5.5 percent and a minimum total capital-to-assets requirement of 6.0 per-

cent. Since these requirements are minimums, most banking organizations are expected to, and in fact do, operate above the supervisory standards.

When we implemented the more formal capital requirements, we stated that, besides arresting the decline in capital ratios, we intended to modify our regulatory and supervisory policies to encourage banking organizations to strengthen their capital positions over time. The present requirements are higher than the ratios that were established in 1981. The Federal Reserve expects banking institutions seeking to undertake significant expansion to maintain particularly strong capital positions, well above the minimum supervisory standards. In addition, we have encouraged banks with poor earnings or other financial problems to conserve their capital by adopting more conservative dividend policies. Finally, we have used the enforcement process, when appropriate, to require banking organizations to restore or strengthen their capital bases.

From our perspective, these guidelines and procedures have worked reasonably well. Since their adoption in 1981, the banking system has raised significant amounts of new capital, and capital ratios in the industry, particularly those of the larger institutions, have shown marked improvement. For example, at year-end 1981, the average primary capital ratio for the nation's 50 largest bank holding companies stood at 4.7 percent. By the end of 1986, this ratio had climbed to 7.1 percent—well above the minimum guideline level of 5.5 percent.

While helping to encourage the reversal in the earlier downtrend in capital ratios, the guidelines may also have had some unintended side effects. Because the current capital standards are based on simple ratios of capital to total assets, they have created an incentive for banks to move or keep certain exposures off their balance sheets. In recent years, new financing and hedging techniques have, in any event, induced a very large

growth in off-balance-sheet liabilities of major banks, none of which are factored into our current capital standards. In addition, because our existing capital standards treat all bank assets alike, they have had the effect of encouraging some institutions to scale back their holdings of relatively liquid, low-risk assets. These developments suggest that the improvement we have seen in capital ratios in recent years overstates the real improvement in capital positions, measured against more realistic measures of risks.

In an effort to address these shortcomings, the Board issued for public comment in early 1986 a proposal for a risk-adjusted capital ratio. The specific objectives of this proposal were to require an appropriate level of capital support for off-balance-sheet exposures and to temper incentives in the existing guidelines that might encourage banks to reduce their holdings of low-risk assets. An equally important objective of this proposal was to move capital policies of U.S. banks more closely in line with those of other major industrial countries.

#### INTERNATIONAL CONVERGENCE

This latter objective is particularly important in light of the increased involvement of banks in overseas activities and the growing interdependence of world financial markets. Because of this interdependency, supervisory authorities need to ensure that prudential rules and standards are sufficient to guarantee the stability and smooth functioning of the international banking system. The globalization of markets has also brought about a dramatic increase in international competition and an awareness that differences in rules among supervisory authorities around the world can create competitive distortions. The competitive disadvantages this could cause might make some supervisors more reluctant, or less able, to take otherwise necessary desirable supervisory actions, knowing that the end result of such actions could be a loss of competitiveness for their banking systems.

In light of these concerns, greater comparability in the prudential standards of major industrial countries has been discussed by regulators around the world for several years. Much

<sup>1.</sup> Primary capital consists of stockholders' equity, perpetual preferred stock, loan-loss reserves, and certain debt instruments that must be converted to common or preferred stock at maturity. Total capital consists of primary capital plus secondary capital instruments—such as limited-life preferred stock and certain qualifying debt instruments.

groundwork has been laid in such international supervisory forums as the Committee on Bank Regulatory and Supervisory Practices ("Basle Supervisors' Committee''). In addition, the U.S. Congress, as you are aware, has recognized the importance of adequate capital levels for banking organizations and has been instrumental in encouraging the bank supervisory authorities to take further action in this area. In particular, the International Lending Supervision Act of 1983 directed the Federal Reserve and the U.S. Treasury Department to "...encourage governments, central banks, and regulatory authorities of other major banking countries to work toward maintaining, and, where appropriate, strengthening the capital bases of banking institutions involved in international lending.'

Critical to achieving this objective, of course, is a more internationally consistent definition of capital and comparable procedures for assessing capital adequacy in relation to banking risks.

### DESCRIPTION OF U.S.-U.K. CAPITAL PROPOSAL

In developing the capital proposal, we wanted a framework that could meet, as effectively as possible, several partly conflicting objectives. First, the approach needed to address the rapid growth in off-balance-sheet exposure and avoid disincentives to holding liquid, low-risk assets. Second, we wanted to avoid any sense that capital requirements would be used as a tool for encouraging the allocation of credit to particular sectors, and we also wanted to avoid excessive complexity. Finally, we sought a framework that, while providing a clear basic structure for analysis, could be sufficiently flexible to enable supervisory authorities, as they evaluate individual banks, to take into account the many factors that affect overall risk that cannot be incorporated in any single formula.

The approach that we have agreed upon among the U.S. authorities and with the Bank of England has three fundamental elements: a common definition of capital, a common risk weighting framework for relating capital to risk assets and off-balance-sheet items, and a common minimum capital requirement.

The proposal defines primary capital to include the basic elements of common stockholders' equity and general loan-loss reserves. In addition, the definition provides for the inclusion in primary capital of other instruments such as perpetual and long-term preferred stock as well as debt securities that meet certain conditions relating to permanence and loss absorption capacity. While the primary capital definition gives banking organizations some flexibility in building their capital bases, the proposal contains provisions to ensure that common stockholders' equity remains the predominant form of bank capital. In the past, the U.S. regulatory authorities have accommodated reasonable innovations in the development of primary capital instruments. In a similar fashion, this proposal also provides room for an appropriate degree of flexibility, consistent with the basic need for an adequate equity cushion.

The second element, the risk weighting system, is the heart of the proposal. This component establishes a framework for ranking the relative riskiness of broad categories of assets and off-balance-sheet exposures. For practical reasons, we tried to avoid developing a risk measurement system that would attempt to gauge all of the various types of, and subtle differences in, risk faced by banking institutions. Instead, we focused primarily on credit risk, although interest rate risk and liquidity considerations are taken into account to a limited extent.

The proposed risk weighting system establishes five risk categories that reflect in a general way the relative magnitude of risk of the obligations assigned to the category. A bank's assets would be divided among the five categories according to the degree of credit risk of the borrower or obligor. Low-risk assets, such as U.S. government securities and short-term bank claims, would be assigned lower weights and, therefore, require less capital than they do under our present system. Normal commercial and individual loans would generally be assigned to the standard risk category, thereby requiring more capital than the lower-risk assets. Offbalance-sheet exposures that involve risks analogous to loans are treated in the same manner as direct extensions of credit. Other contingent items are also included in the risk framework,

438

but only after the face or principal value of such items is adjusted to arrive at an equivalent on-balance-sheet amount.

In formulating this framework, we made some basic assumptions. Domestic governments, for example, are assumed to be generally less risky than other obligors because of their power to levy taxes and create money. Short-term claims on banks are also accorded low risk treatment because of supervision and "safety nets" provided by most governments to their banking systems and to facilitate the smooth functioning of the interbank markets. Most private sector loans are assigned to the standard risk category without regard to the industry in which the borrower operates, the purpose of the loan, or, with a few exceptions, the collateral backing the loan. Obviously, the assignment of assets to risk categories, as I have already suggested, involves some arbitrary judgments at the margin and is certainly not an exact science.

The third element of the proposed agreement is the supervisory ratio requirement. The U.S.–U.K. proposal calls for a minimum, publicly announced ratio that would represent a common and equitable standard against which all U.S. and U.K. banks would be compared.

The decision on where to set the minimum risk-based ratio has not yet been made. Obviously, the establishment of the minimum requirement will involve important considerations of safety and soundness, as well as a sensitivity to the effect of the minimum on pricing and competitive factors. Banks with a high level of quality liquid assets and a low level of off-balance-sheet liabilities will not be affected by the proposal, whereas those banks with large contingent exposure and lower liquidity levels may require adjustment. In any respect, the proposal would be implemented in the context of a minimum capital standard. It is primarily the largest banking organizations that are engaged in the activities addressed by the risk-based capital proposal; the overwhelming majority of smaller banks will probably be unaffected.

Even among the larger institutions, the impact of the minimum risk-based ratio will vary. Some institutions may find it necessary to strengthen their capital bases or reduce their overall level of risk, including off-balance-sheet exposures; others may find that on a risk-adjusted basis their capital positions look even stronger. Absent other supervisory concerns, such institutions may have room for further prudent growth and expansion.

We at the Federal Reserve intend to use the risk-based ratio to supplement our existing capital guidelines program, at least until sufficient experience is gained with the risk-based standard to justify relying on it more fully as a measure of capital adequacy. The effect of this use of the risk-based ratio is to maintain a reasonable floor below which, under normal circumstances, ratios of capital to total assets would not be allowed to fall. The interest of the government in maintaining some maximum leverage constraint or, put in different words, some minimum ratio of capital to total assets seems entirely consistent with the freedom of banks to change the composition of their assets and the nature of their business within broad limits.

It is important to point out that the risk-based ratio would be but one element in the assessment of a bank's capital position. The on-site examination, together with other important components of our supervisory program, will continue to be the principal means for evaluating a bank's overall financial condition. Thus, those critical factors that affect a bank's soundness, but which are not factored into the risk-based ratio, such as earnings, loan diversification, liquidity, asset quality and collateral, operational risks, and management, will continue to play a central role in our final judgments on capital adequacy.

### PRICING AND COMPETITIVE CONSIDERATIONS

I cannot emphasize strongly enough our interest in the competitiveness of U.S. banks. Only a strong, competitive, and profitable banking system can remain healthy in the long run and fulfill the strategic role that banks play in our economic and financial system.

In considering the issue of competitiveness, it is possible that banks that are permitted to operate with lower capital levels may have a competitive advantage, at least in the short run,

over banks that are required to meet higher capital standards. But, from the standpoint of appropriate public policy, those considerations have to be balanced against the long-run safety and soundness of the banking system.

In striking that balance, questions have inevitably been raised about the effects of the riskbased proposal on U.S. banks' ability to price competitively certain banking services. This is especially true of those off-balance-sheet instruments, such as loan commitments, letters of credit, and interest rate and foreign exchange rate contracts, that are being explicitly factored into our capital ratios for the first time. As I have indicated, one of the major objectives of riskbased capital is to address the rapid growth of off-balance-sheet exposures, and bankers themselves clearly acknowledge that these instruments involve some credit risks. In addition, logic and experience suggest that certain indirect extensions of credit or financial guarantees can involve risks that are similar to those stemming from direct loans.

We are aware of the potential pricing implications of the risk-based proposal, and have sought specific comment on how the proposal may affect the ability of banks to compete in the provision of certain services. And we will, of course, carefully consider the comments we receive. However, I am concerned that competitive pressures may have eroded spreads on some of these instruments to the point that banks are not being fully compensated for the credit risks involved. To the extent that this is the case, the risk-based capital proposal may encourage a more rational and appropriate pricing structure that is consistent with the long-run stability and health of our banking system.

Another dimension of this issue relates to the capital requirements of nonbank financial institutions that have become major competitors of commercial banks. In my view, as U.S. banks come into increasing competition with nonbank financial institutions, including thrift institutions and investment banks, appropriate efforts should be made to ensure that capital requirements among different institutions conducting the same activities are brought into closer alignment. For this reason, we strongly support the steps taken by the Federal Home Loan Bank Board to encourage thrift institutions to strengthen their capital positions.

The need for parity of capital standards on an international basis is no less pressing. And, of course, as I have indicated before, that parity is an important objective of the U.S.-U.K. proposal. The prospect of major international banking organizations operating throughout the world with vastly different capital requirements and capital resources is not, in my view, in the best long-run interest of sound, stable, and competitive international banking and financial markets. Thus, it is our hope that banking supervisors in other major industrial countries will examine the risk-based capital proposal with a view toward bringing their policies—to the extent possible into closer alignment with the type of framework spelled out in the U.S.-U.K. agreement.

In the past, we have not applied extraterritorially U.S. bank capital standards on a consolidated basis to foreign banking organizations seeking to expand in the United States. However, the U.S.-U.K. risk-based capital proposal represents a step toward a more consistent and equitable international norm for assessing capital adequacy. For this reason, we believe that such a framework can, under appropriate circumstances, assist in evaluating the capital positions of foreign banks applying to acquire U.S. institutions.

#### **CONCLUSION**

The internationalization of banking and financial markets and the intensification of competition among multinational institutions underscore the importance of efforts to better rationalize and harmonize the competitive and prudential framework within which banks must operate. Despite the progress embodied in the U.S.-U.K. proposal, however, much remains to be done. We recognize that significant differences among countries in banking, accounting, and supervisory and regulatory practices suggest that progress toward achieving greater consistency on an international level may be gradual and involve difficult and complex discussions.

Nonetheless, I can assure you that the Federal

Reserve is committed to working with supervisors from other countries to encourage the development and adoption of more consistent and broadly accepted international capital standards. In the meantime, I believe that adoption by U.S.

regulators of a framework along the lines of the U.S.-U.K. proposal, while far from perfect, represents a reasonable step toward a more rational framework for relating the analysis of capital needs to risk considerations.

### **Announcements**

### ADOPTION OF POLICY STATEMENT ON BANK HOLDING COMPANIES

The Federal Reserve Board adopted a policy statement on April 24, 1987, on the responsibility of bank holding companies to act as sources of financial and managerial strength to their subsidiary banks.

The Board's statement reiterates in detail a general policy that has been expressed on numerous occasions in accordance with authority that is provided under the Bank Holding Company Act and the enforcement provisions of the Federal Deposit Insurance Act.

The policy statement is effective immediately. However, the Board will accept comment for review through July 1, 1987.

### REPORT AVAILABLE ON PRICED SERVICES IN 1986

The Federal Reserve Board has issued a report summarizing developments in the priced services areas for 1986 and providing detailed financial results of providing those services.

The Board issues a report on priced services annually and a priced service balance sheet and income statement quarterly. The financial statements are designed to reflect standard accounting practices, taking into account the nature of the Federal Reserve's activities and its unique position in this field.

### ISSUANCE OF REVISED LIST OF OTC STOCKS SUBJECT TO MARGIN REGULATIONS

The Federal Reserve Board has published a revised list of over-the-counter (OTC) stocks that are subject to its margin regulations, effective May 12, 1987.

This List of Marginable OTC Stocks supersedes the revised List of Marginable OTC Stocks that was effective on February 10, 1987. Changes that have been made in the list, which now includes 3,103 OTC stocks, are as follows: 181 stocks have been included for the first time, 163 under national market system (NMS) designation; 29 stocks previously on the list have been removed for substantially failing to meet the requirements for continued listing; and 37 stocks have been removed for reasons such as listing on a national securities exchange or involvement in an acquisition.

The list includes all OTC securities designated by the Board pursuant to its established criteria as well as all securities qualified for trading in the NMS. This list includes all securities qualified for trading in tier 1 of the NMS through May 12 and those in tier 2 through April 21, 1987. Additional OTC securities may be designated as NMS securities in the interim between the Board's quarterly publications and will be immediately marginable. The next publication of the Board's list is scheduled for July 1987.

Besides NMS-designated securities, the Board will continue to monitor the market activity of other OTC stocks to determine which stocks meet the requirements for inclusion and continued inclusion on the list.

#### PROPOSED ACTION

The Federal Reserve Board has issued for public comment a proposal to amend its Regulation T (Margin Credit Extended by Brokers and Dealers) to revise the definition of an OTC margin bond. Comment is requested by May 26.

### System Membership: Admission of State Banks

The following banks were admitted to membership in the Federal Reserve System during the period April 1 through April 30, 1987:

| Arizona                               | Philadelphia Rittenhouse Trust            |
|---------------------------------------|---|
| Fountain Hills Bank of Fountain Hills | Company                                   |
|                                       | Texas                                     |
| Pennsylvania                          | Mineral Wells First State Bank of Mineral |
| Newtown Commonwealth State Bank       | Wells                                     |

# Record of Policy Actions of the Federal Open Market Committee

MEETING HELD ON FEBRUARY 10–11, 1987

### Domestic Policy Directive

The information reviewed at this meeting suggested on balance that economic activity was continuing to grow at a moderate pace. Nonfarm payroll employment expanded sharply in January, partly reflecting unusual seasonal developments. Industrial production rose considerably in December and over the fourth quarter as a whole. However, consumer spending in real terms changed little during the last quarter of 1986 and business capital spending generally appears to have remained sluggish. Activity in the housing sector picked up toward year-end. The deficit in the merchandise trade balance apparently increased slightly in the fourth quarter; however, net exports of goods and services, after adjusting for changes in prices, improved somewhat during the quarter. Basic trends in wage and price inflation still appear to have been moderate in recent months, although prices of oil and some other industrial commodities have turned up.

Total nonfarm payroll employment rose almost ½ million further in January, after picking up in the latter part of the year. Service-producing industries were responsible for much of this growth. Outside the service-producing sector, the construction industry accounted for the balance of job growth in January, reflecting favorable weather conditions during the survey reference week. Manufacturing employment was essentially unchanged in January, after some improvement in the fourth quarter. The civilian unemployment rate held at 6.7 percent.

The industrial sector of the economy expanded appreciably in the latter part of the year. The index of industrial production rose 0.5 percent in December and for the fourth quarter as a whole increased at an annual rate of 3½ percent, the

largest quarterly advance since late 1984. Recent gains were widespread, with particularly sharp increases in home goods and in defense and space equipment. Production of business equipment, however, remained lackluster. Capacity utilization in manufacturing, mining, and utilities rose 0.2 percentage point in December to 79.6 percent, but was still below its level at the end of 1985.

Consumer spending declined slightly in real terms in the fourth quarter as new car and truck sales slumped. Auto sales revived temporarily in December, when consumers took advantage of sales tax deductions that were to be eliminated after year-end, but fell dramatically in January. Consumer expenditures on items other than autos continued to rise somewhat at the end of 1986 but at a pace considerably slower than that experienced earlier in the year.

Business investment appears to have remained sluggish. On the equipment side, capital outlays were depressed in the fourth quarter by the drop in motor vehicle purchases. However, that drop was almost offset by a pickup in spending on other equipment, which was motivated in part by efforts to take advantage of the favorable depreciation schedules for some types of equipment placed in service before January 1, 1987. Leading indicators of investment spending suggested that overall outlays will remain sluggish in the early months of 1987. New orders for nondefense capital goods other than aircraft dropped in the last quarter of 1986. Also, outlays for nonresidential construction have continued to trend down in recent months, and the value of construction put-in-place in December was more than 10 percent below a year earlier.

Activity in the housing sector picked up at the end of the year. Housing starts rose to an annual rate of 1.8 million units in December, after drifting lower since late spring. Single-family starts were near the pace recorded earlier in the

year. In addition, sales of both new and existing homes rose in December partly in response to lower mortgage interest rates. Multifamily starts rebounded in December, but declined for the fourth quarter as a whole as high vacancy rates and recent tax changes constrained construction of rental housing.

Price and wage increases remained relatively moderate in the latter part of 1986, although the prices of a number of commodities, including oil, have posted large gains in recent months. Consumer prices rose 0.3 percent in November and 0.2 percent in December, remaining within the range of monthly increases evident since last summer. World crude oil prices rose in mid-December following the latest agreement by the Organization of Petroleum Exporting Countries (OPEC) to restrict output, and that rise pushed retail energy prices up in December. At the same time, increases in consumer food prices slowed after several months of sharp advances. Consumer prices, apart from food and energy, continued to rise about in line with the pace registered for 1986 as a whole. Wage increases slowed in 1986 from the rates in other recent years.

The trade-weighted value of the dollar against other G-10 currencies declined about 73/4 percent, on balance, since the December 15-16 FOMC meeting. Since that meeting, the dollar has depreciated 10 percent against the mark and about 6 percent against the yen. Over the period, exchange rates were affected in part by data on the U.S. trade balance for November. However, the announcement by the German Federal Bank in late January of a cut in the discount rate and the improvement in U.S. trade figures shown when preliminary December data were released, along with indications of a stronger U.S. economy, tended to relieve downward pressures on the dollar, which had rebounded from its lows in late January. Indicators of economic activity in the major foreign industrial countries still showed low rates of expansion. Available data for the U.S. merchandise trade deficit in the fourth quarter suggested a slight increase from the third quarter as nonpetroleum imports increased more than exports. However, after allowing for price changes, net exports of goods and services improved somewhat during the quarter.

At its meeting in December, the Committee adopted a directive that called for maintaining

the existing degree of pressure on reserve positions. This action was expected to be consistent with growth in both M2 and M3 at an annual rate of about 7 percent from November to March. The Committee agreed that the growth in M1 would continue to be evaluated in light of the behavior of the broader monetary aggregates and other factors. The members also decided that slightly greater or somewhat lesser reserve restraint would be acceptable depending on the behavior of the monetary aggregates, taking into account the strength of the business expansion, developments in foreign exchange markets, progress against inflation, and conditions in domestic and international credit markets. The intermeeting range for federal funds was maintained at 4 to 8 percent.

Growth of M2 and M3 accelerated in December before slowing a little in January. Expansion of these two aggregates for 1986 as a whole was near the upper end of their respective ranges established by the Committee for the year. M1 growth slowed in January from an exceptionally rapid pace in late 1986. Growth of the monetary aggregates was boosted by an unusually large volume of transactions around year-end prompted in part by incentives to complete certain types of transactions before the new tax law took effect at the start of 1987. As a result of these transactions, demand deposits rose at an unprecedented rate from mid-December through early January; by late January the bulge in such deposits had run off. In addition, banks stepped up their issuance of managed liabilities, especially CDs, over the past two months to help fund the rise in credit.

Paralleling the bulge in transaction balances around year-end, growth in total reserves surged in December, but then subsided during January. Excess reserves also increased rapidly in December. The federal funds rate rose sharply at year-end and adjustment plus seasonal borrowing averaged around \$900 million in the statement period ending December 31. Borrowing receded to \$290 million in the first half of January but bulged again in the second half, reflecting another rise in excess reserves. The federal funds rate dropped back to 6 percent or a little above after early January.

Most other short-term rates rose around yearend as credit demands intensified and the federal funds market tightened, but subsequently those increases were largely reversed. On balance, rates on short-term Treasury securities were up about 25 basis points over the intermeeting period, while rates on private obligations were narrowly mixed. In long-term markets, yields on Treasury securities also were higher than at the time of the December meeting, reflecting market reactions to incoming economic data, but rates in corporate and mortgage markets declined into more typical alignment with Treasury rates. Stock prices soared to new highs over the intermeeting period.

The staff projections presented at this meeting suggested that real gross national product would continue to grow at a moderate rate through the end of 1987. A key element shaping the forecast continued to be the prospects for an improvement in real net exports of goods and services. Export growth was expected to accelerate and import growth to slow as U.S. competitiveness increased. At the same time, the growth in domestic demand was expected to be moderate, primarily reflecting the damping influence of higher import prices on real income gains, a less expansive fiscal policy, and the weakness in nonresidential construction. In contrast, equipment spending was projected to grow moderately as domestic production expanded, and residential construction was expected to provide some stimulus to economic activity over the projection horizon. The rate of inflation was anticipated to rise somewhat as a result of the depreciation of the dollar and a firming in world oil prices. However, the remaining margins of slack in labor and product markets were expected to exert a moderating influence on prices and wages during the year.

In the Committee's discussion of the economic situation and outlook, most of the members viewed recent developments as pointing on balance toward continuing expansion at a moderate pace, in line with that experienced on average over the past two to three years. The members generally agreed that special factors—the delayed effects of the dollar's depreciation and the turnaround in oil prices—were likely to contribute to a modest upturn in the rate of inflation during 1987. The members acknowledged that there were appreciable risks that economic activity and prices might deviate significantly from

current expectations, especially given the uncertainties stemming from persisting—though hopefully diminishing—imbalances in the federal budget and the balance of trade. Financial strains associated with weaknesses in important sectors of the economy such as agriculture and energy and generally rising debt burdens also were cited as sources of vulnerability in the economy.

In keeping with the usual practice at meetings when the Committee considers its long-run objectives for monetary growth, the members of the Committee and the Federal Reserve Bank presidents not currently serving as members had prepared specific projections of economic activity, the rate of unemployment, and the overall level of prices. For the period from the fourth quarter of 1986 to the fourth quarter of 1987, the forecasts for growth of real GNP had a central tendency of 21/2 to 3 percent and a full range of 2 to 4 percent. Forecasts of nominal GNP centered on growth rates of 5\(^4\) to 6\(^2\) percent and ranged from 4½ to 7½ percent. Estimates of the civilian rate of unemployment in the fourth quarter of 1987 were in a range of 6½ to 6¾ percent. With regard to the rate of inflation, as indexed by the GNP deflator, the projections centered on rates of 3 to 3½ percent and had an overall range of 2½ to 4 percent. In making these forecasts, the members took account of the Committee's objectives for monetary growth in 1987. The members also assumed that future fluctuations in the foreign exchange value of the dollar would not be of sufficient magnitude to have any significant effect on the projections. In addition, the members anticipated that considerable progress would be made in reducing the size of the federal budget deficit.

As they had at previous meetings, members emphasized that sustained economic expansion would depend to an important extent on the achievement of significant improvement in the nation's balance of trade. While indications of some improvement in net exports were multiplying, the members expressed a range of views regarding prospects for the year ahead. On the export side, several observed that the outlook for relatively sluggish economic activity in key industrial nations—and indeed around the world more generally—suggested that continuing gains in exports might be relatively limited. Nonetheless, reports from many parts of the country

446

indicated that the depreciation of the dollar and the concomitant improvement in the competitive position of U.S. firms were being reflected in new exporting opportunities, if not in a substantial increase in actual exports to date.

With regard to imports, some members saw considerable potential for the substitution of domestic goods for foreign imports as prices of the latter rose. In this view the more recent depreciation of the dollar would tend to be felt more fully in import prices because foreign suppliers had less room than earlier to absorb a depreciated dollar through reductions in their profit margins. Other members were less optimistic about the outlook for imports. In their view, foreign competitors would tend to hold down their prices to maintain their sales, especially given the ample availability of production resources worldwide. Moreover, the import penetration into U.S. markets had become embedded in contractual and other trading arrangements that were difficult to change, and competitive gains against imports would be restrained to the extent that domestic producers responded to rising import prices by raising their own prices, as had already occurred in a major U.S. industry. However, as in the case of exports, a growing number of business contacts were reporting increasing opportunities to compete with imports on the basis of price, including examples of actual or prospective sales to domestic firms that previously had tended to look abroad to meet their outsourcing requirements.

With regard to domestic developments bearing on the outlook, several members commented that the evidence of the last few months suggested, on the whole, that the expansion retained momentum despite its comparative longevity. To some extent, the favorable year-end statistics undoubtedly reflected tax-related spending that had been moved up from 1987 into late 1986, and a number of members observed that the recent statistics should therefore be viewed with a degree of caution. Looking ahead, members observed that overall demands from domestic sectors might moderate over the year. They referred in particular to the possibility that growth in consumer spending, which had been a mainstay of the expansion, might provide less stimulus, especially in the context of an already low saving rate. One member noted that the underlying demand for new automobiles appeared to be relatively weak, after allowing for the year-end surge related to tax considerations and for the impact of temporary sales incentive programs. Another commented, however, that reduced withholdings of personal income taxes were seen by some business firms as a positive development for retail sales.

In the Committee's discussion of the prospects for inflation, the members generally agreed that the outlook remained basically favorable even though rising import prices and the apparent turnaround in oil prices could be expected to result in somewhat higher average prices over the next several quarters. Price competition remained intense in many industries, notably those subject to competition from abroad, and recent labor contract settlements continued favorable in terms of holding down business costs. Moreover. many business firms were still making vigorous efforts to improve their operating efficiencies and otherwise to curb costs. Nonetheless, several members suggested that the risks of a deviation, if any, from current inflation forecasts appeared to be in the direction of more inflation. Some referred to the risk that rapid monetary growth and buildup of liquidity might exert a delayed impact on future prices, though there was no current evidence of such an impact. One member expressed the view that a key uncertainty in the outlook for inflation was not so much the direct effects of rising import prices, but the price responses of competing domestic producers. Members also noted that for technical reasons the rise in import and oil prices, to the extent that they occurred, would have a relatively large effect on consumer prices. The latter, because of their high visibility, could exacerbate inflationary expectations, with adverse implications for future price and wage decisions. Disappointing progress toward reducing the federal budget deficit also could tend to fuel inflationary sentiment.

At this meeting the Committee completed the review, begun at the December meeting, of the ranges for growth in the monetary and debt aggregates in 1987; those ranges had been set on a tentative basis in July in keeping with the requirements of the Full Employment and Balanced Growth Act of 1978 (the Humphrey-Hawkins Act). The tentative ranges included growth of 5½ to 8½ percent for both M2 and M3 for the

period from the fourth quarter of 1986 to the fourth quarter of 1987. In the case of M1 the Committee had indicated in July on a more tentative basis than usual that it might retain the 1986 range of 3 to 8 percent for 1987, but there had been considerable sentiment against using any numerical range for M1 at the December meeting. The associated range for growth in total domestic nonfinancial debt had been set provisionally in July at 8 to 11 percent for 1987.

During the Committee's discussion of appropriate ranges for growth of M2 and M3 in 1987, most of the members expressed a preference for retaining the tentative range of 5½ to 8½ percent for both of the broader aggregates. That range represented a reduction of ½ percentage point from the one that had been targeted for 1986. Several members stressed the importance of some moderation in money growth and the desirability of adopting reduced ranges from the standpoints of both the substance and the perception of an appropriately anti-inflationary monetary policy. Moreover, a substantial slowing in money growth-perhaps to around the middle of the ranges-could well be consistent with satisfactory economic performance, given the assessment of the economy by Committee members and assuming considerably less movement in interest rates than had been experienced in recent years. Members also commented that the ranges in question were likely to provide adequate room for any policy adjustments that might be needed during the year, assuming that developments bearing on policy formulation did not diverge greatly from current expectations.

While a range of 5½ to 8½ percent for M2 and M3 was acceptable to all of the members, there was some sentiment for slightly higher or lower ranges. Retention of the slightly higher 6 to 9 percent ranges employed in 1986 would accommodate more comfortably the possibility of another sizable decline in the velocities of the broader aggregates (that is, the ratios of nominal GNP to the aggregates). Such a decline might be induced if substantial further reductions in interest rates were needed to sustain economic expansion. On the other hand, slightly lower ranges would provide more leeway on the downside in the event that velocity growth rebounded from the previous marked declines. Insofar as the risks were on the side of greater inflation, a rebound in velocity appeared more likely and in such circumstances a lower range could provide needed scope for a policy designed to maintain progress toward price stability.

Turning to M1, the members recognized that its prospective behavior remained subject to exceptional uncertainties. To a greater extent than for the broader aggregates, the demand for M1 balances had become highly sensitive to movements in interest rates over the course of recent years; this development evidently reflected in considerable measure the deregulation of deposit rate ceilings and a related increase in the interest-bearing components of M1 as a repository for savings as well as for transactions funds. Adaptations to deregulation were probably not completed and in conjunction with an accelerated pace of other financial innovations and a surging volume of financial transactions, it had become very difficult to assess or predict the implications of specific rates of M1 growth for the future course of business activity and the rate of inflation.

Accordingly, while most members clearly wished to take account of changes in M1 in reaching policy judgments, they felt the meaning of fluctuations in M1 could only be appraised in the light of other economic developments. Consequently, they did not want to specify a numerical target range for this aggregate, at least at this time. Some slowing in 1987 was expected and was felt to be necessary to sustain progress toward price stability, but the appropriate amount of slowing was difficult to predict, given the uncertainties about velocity behavior. These members felt that it would not be meaningful to establish a range that was so wide that it would cover all foreseeable circumstances or a conventional range that might well need to be exceeded in either direction. For example, relatively slow growth in M1 might be desirable—and might require some firming of reserve conditions—if in the context of expanding economic activity, inflation appeared to be worsening, possibly because of a weakening dollar, and the broader monetary aggregates were growing rapidly. Conversely, relatively rapid expansion in M1 might be indicated—and accommodated—in a situation in which economic activity was relatively sluggish, progress was being maintained toward achieving eventual price stability and a sustainable pattern of international transactions, and interest rates were declining.

A few of the members preferred that a specific, numerical range be established for M1 growth in 1987, although they also wanted to make clear that growth outside the range might be desirable or acceptable under some circumstances. These members gave considerable emphasis to the possible usefulness of targeting on a narrow monetary aggregate, as well as on the broader aggregates, in underscoring the System's longer-run commitment to an anti-inflationary policy. They also felt the Committee might well want to increase emphasis on M1 in the future, and that a current target would represent appropriate continuity. Moreover, a specific range would have the advantage of indicating the Committee's best judgment regarding appropriate M1 growth if economic and financial conditions did not deviate markedly from current expectations. In contrast, one member felt that M1 provided little or no useful information at present and a more predictable relationship between Ml and economic performance was not likely to be reestablished. Consequently, the Committee should concentrate instead on other broad financial aggregates including the measure for liquidity.

After discussion, the members agreed that the Committee would need to monitor and evaluate M1 developments closely in the light of the behavior of its velocity, the performance of the economy, including the nature of emerging price pressures, and conditions in domestic and international financial markets. While the precise circumstances under which M1 developments might directly influence operating decisions could not be predicted, the members contemplated the possible desirability of reintroducing M1 explicitly during the year as a benchmark, along with the broader monetary aggregates, for making short-run operating decisions. For now, the Committee would indicate in broad terms that the operational significance of M1 could only be judged in the perspective of concurrent economic and financial developments, including the behavior of M2 and M3.

The Committee members also agreed on the desirability of continuing to monitor the growth of total domestic nonfinancial debt. The growth in total debt had exceeded the expansion in nominal GNP by substantial margins in recent

years, and some members expressed concern about the resulting increase in the financial vulnerability of the economy. One member observed that under some circumstances a further rapid growth in debt might lend some weight toward implementing some policy restraint that also was deemed to be advisable for other reasons. The growth in total domestic nonfinancial debt was expected to moderate considerably in 1987, but it appeared likely to remain in excess of the expansion in nominal GNP. The members agreed that the tentative range of 8 to 11 percent contemplated last July for 1987 continued to encompass likely developments.

At the conclusion of the Committee's discussion, all of the members indicated that they favored, or could accept, the ranges for M2 and M3 and the monitoring range for total debt that had been adopted on a tentative basis in July. No numerical range would be established for M1 growth in 1987, but M1 developments would receive careful evaluation in the context of emerging economic and financial conditions and the behavior of the broader monetary aggregates. It was understood that under some circumstances M1 might again be targeted explicitly during the year to provide a guide, along with M2 and M3, for the short-run implementation of monetary policy.

Thereupon, the Committee approved the following paragraphs relating to its objectives for monetary and debt aggregates in 1987:

The Federal Open Market Committee seeks monetary and financial conditions that will foster reasonable price stability over time, promote growth in output on a sustainable basis, and contribute to an improved pattern of international transactions. In furtherance of these objectives the Committee established growth ranges of 5½ to 8½ percent for both M2 and M3, measured from the fourth quarter of 1986 to the fourth quarter of 1987. The associated range for growth in total domestic nonfinancial debt was set at 8 to 11 percent for 1987.

With respect to M1, the Committee recognized that, based on experience, the behavior of that aggregate must be judged in the light of other evidence relating to economic activity and prices; fluctuations in M1 have become much more sensitive in recent years to changes in interest rates, among other factors. During 1987, the Committee anticipates that growth in M1 should slow. However, in the light of its sensitivity to a variety of influences, the Committee decided not to establish a precise target for its growth over the year as a whole at this time. Instead, the appropriateness of

changes in M1 during the course of the year will be evaluated in the light of the behavior of its velocity, developments in the economy and financial markets, and the nature of emerging price pressures.

In that connection, the Committee believes that, particularly in the light of the extraordinary expansion of this aggregate in recent years, much slower monetary growth would be appropriate in the context of continuing economic expansion accompanied by signs of intensifying price pressures, perhaps related to significant weakness of the dollar in exchange markets, and relatively strong growth in the broad monetary aggregates. Conversely, continuing sizable increases in M1 could be accommodated circumstances characterized by sluggish business activity, maintenance of progress toward underlying price stability, and progress toward international equilibrium. As this implies, the Committee in reaching operational decisions during the year, might target appropriate growth in MI from time to time in the light of circumstances then prevailing, including the rate of growth of the broader aggregates.

Votes for this action: Messrs. Volcker, Corrigan, Angell, Guffey, Heller, Johnson, Keehn, Melzer, Morris, and Ms. Seger. Votes against this action: None. Absent and not voting: Mrs. Horn. Mr. Keehn voted as alternate for Mrs. Horn.

In the Committee's discussion of policy implementation for the weeks immediately ahead, most of the members indicated that they were in favor of directing open market operations, at least initially, toward maintaining the existing degree of pressure on reserve positions. One member preferred to move promptly toward somewhat firmer reserve conditions. A number of others observed that they would be prepared to accept some firming later if recent indications of some strengthening in economic activity were to persist in the context of further rapid monetary expansion and signs of growing inflationary pressures. However, these members felt that the desirability of an immediate move toward restraint had not been established. In particular, they felt that economic and financial developments in the period around the year-end needed to be interpreted with caution, especially because of the tax effects that were probably involved, and that confirming evidence should be awaited before any adjustments in policy implementation were undertaken.

The members anticipated that current conditions in reserve markets were likely to be associated with slower growth in M2 and M3 over the period ahead than the average pace in recent

months. To a considerable extent, the anticipated slowing would represent a reversal of special factors that had contributed to faster expansion-including a bulge in M1-around the yearend. Because of the distortions created by yeardevelopments, the members generally agreed that use of a January base, instead of November as in the previous directive, or December, would convey more meaningful information regarding the Committee's expectations for growth of the broader aggregates through the remainder of the first quarter. Given the uncertainties that were involved and in keeping with the Committee's decision on the longer-run targets, the members accepted a proposal not to indicate a numerical expectation for the growth of M1 over the period immediately ahead, but to note in a general way that the expansion of this aggregate was likely to moderate substantially. Over a longer perspective, the growth of the aggregates, especially M1, might display a moderating trend as the effects of earlier declines in interest rates subsided.

With regard to possible adjustments during the intermeeting period, the members generally felt that policy implementation should be especially alert to the potential need for some firming of reserve conditions. In this view, somewhat greater reserve restraint would be warranted if monetary growth did not slow in line with current expectations and there were concurrent indications of intensifying inflationary pressures against the background of stronger economic data. One indicator of the possibility of potential pressures on prices might be a further tendency for the dollar to weaken. One member preferred a directive that did not contemplate any easing during the weeks ahead, but most of the members did not want to rule out the possibility of some slight easing during the intermeeting period, although they did not view the conditions for such a move as likely to emerge.

At the conclusion of the Committee's discussion, all but one member indicated that they could vote for a directive that called for no change in the current degree of pressure on reserve positions. The members expected this approach to policy implementation to be consistent with some reduction in the growth of M2 and M3 to annual rates of about 6 to 7 percent over the two-month period from January to March.

Over the same interval, growth in M1 was expected to moderate substantially from an extraordinarily high rate in the closing months of 1986. The members indicated that somewhat greater reserve restraint would be acceptable, and slightly less reserve restraint might be acceptable, over the intermeeting period depending on the behavior of the monetary aggregates, taking into account the strength of the business expansion, the performance of the dollar in foreign exchange markets, progress against inflation, and conditions in domestic and international credit markets. The members agreed that the intermeeting range for the federal funds rate. which provides a mechanism for initiating consultation of the Committee when its boundaries are persistently exceeded, should be left unchanged at 4 to 8 percent.

At the conclusion of the meeting, the following domestic policy directive was issued to the Federal Reserve Bank of New York:

The information reviewed at this meeting suggests on balance that economic activity continues to grow at a moderate pace. Total nonfarm payroll employment grew sharply in January in part reflecting unusual seasonal developments. The civilian unemployment rate remained at 6.7 percent in January. Industrial production increased considerably in December and over the fourth quarter as a whole. Total retail sales rose substantially in December, largely reflecting a year-end surge in automobile sales, but were little changed on balance in the fourth quarter. Housing starts also strengthened in December after trending lower since late spring. Business capital spending generally appears to have remained sluggish. Available data for the U.S. merchandise trade deficit in the fourth quarter suggest a slight increase from the third quarter; however, after allowing for price changes, net exports of goods and services improved somewhat during the quarter. In late 1986 consumer and producer prices generally were continuing to rise at moderate rates, although prices of crude oil and some other industrial commodities firmed. Labor cost increases were more restrained in 1986 than in other recent years.

Growth of M2 and M3 picked up substantially in December before slowing a little in January. For 1986 as a whole, expansion of these two aggregates was near the upper end of their respective ranges established by the Committee for the year. Growth of M1 slowed in January from an exceptionally rapid pace in late 1986. Expansion in total domestic nonfinancial debt remained appreciably above the Committee's monitoring range for 1986. Although short-term interest rates generally firmed around year-end, on balance interest rates have shown small mixed changes since

the December 15-16 meeting of the Committee; rates on Treasury securities, including bonds, have risen a little over the period while rates on most private obligations have declined slightly. In foreign exchange markets the trade-weighted value of the dollar against the other G-10 currencies has declined substantially on balance since the December meeting.

The Federal Open Market Committee seeks monetary and financial conditions that will foster reasonable price stability over time, promote growth in output on a sustainable basis, and contribute to an improved pattern of international transactions. In furtherance of these objectives the Committee established growth ranges of 5½ to 8½ percent for both M2 and M3, measured from the fourth quarter of 1986 to the fourth quarter of 1987. The associated range for growth in total domestic nonfinancial debt was set at 8 to 11 percent for 1987.

With respect to M1, the Committee recognized that, based on experience, the behavior of that aggregate must be judged in the light of other evidence relating to economic activity and prices; fluctuations in M1 have become much more sensitive in recent years to changes in interest rates, among other factors. During 1987, the Committee anticipates that growth in M1 should slow. However, in the light of its sensitivity to a variety of influences, the Committee decided not to establish a precise target for its growth over the year as a whole at this time. Instead, the appropriateness of changes in M1 during the course of the year will be evaluated in the light of the behavior of its velocity, developments in the economy and financial markets, and the nature of emerging price pressures.

In that connection, the Committee believes that, particularly in the light of the extraordinary expansion of this aggregate in recent years, much slower monetary growth would be appropriate in the context of continuing economic expansion accompanied by signs of intensifying price pressures, perhaps related to significant weakness of the dollar in exchange markets, and relatively strong growth in the broad monetary aggregates. Conversely, continuing sizable increases in M1 could be accommodated in circumstances characterized by sluggish business activity, maintenance of progress toward underlying price stability, and progress toward international equilibrium. As this implies, the Committee in reaching operational decisions during the year, might target appropriate growth in M1 from time to time in the light of circumstances then prevailing, including the rate of growth of the broader aggregates.

In the implementation of policy for the immediate future, the Committee seeks to maintain the existing degree of pressure on reserve positions. This action is expected to be consistent with growth in M2 and M3 over the period from January through March at annual rates of about 6 to 7 percent. Growth in M1 is expected to slow substantially from the high rate of earlier months. Somewhat greater reserve restraint would, or slightly lesser reserve restraint might, be acceptable depending on the behavior of the aggregates, taking

into account the strength of the business expansion, developments in foreign exchange markets, progress against inflation, and conditions in domestic and international credit markets. The Chairman may call for Committee consultation if it appears to the Manager for Domestic Operations that reserve conditions during the period before the next meeting are likely to be associated with a federal funds rate persistently outside a range of 4 to 8 percent.

Votes for the short-run operational paragraph: Messrs. Volcker, Corrigan, Angell, Guffey, Heller, Johnson, Keehn, Morris, and Ms. Seger. Vote against this action: Mr. Melzer. Absent and not voting: Mrs. Horn. Mr. Keehn voted as alternate for Mrs. Horn.

Mr. Melzer favored some tightening of reserve conditions. He noted the strong growth in bank loans in the November through January period and the firm federal funds rate that had prevailed despite the extraordinary pace of reserve growth. In addition, he cited the recent declines in the foreign exchange value of the dollar. Finally, looking ahead, he pointed out the potential for a further rise in inflationary expectations and, accordingly, he believed that prompt action toward restraint might avert the need for more substantial tightening later.

At a telephone conference on February 23, the Committee heard a report from the Chairman regarding the deliberations in Paris during the previous weekend of the Ministers of Finance and Central Bank Governors of several major industrial countries. The Committee members discussed the possible implications of the decisions reached in Paris for U.S. intervention in the foreign exchange markets.

# Legal Developments

#### AMENDMENT TO RULES REGARDING AVAILABILITY OF INFORMATION

The Board of Governors is amending 12 C.F.R. Part 261, its Rules Regarding Availability of Information, to implement the Freedom of Information Reform Act ("FOI Reform Act"), Pub. L. 99–570, by revising the schedule of fees applicable to requests for Board records pursuant to the Freedom of Informaton Act ("FOIA").

Effective May 27, 1987, the Board amends 12 C.F.R. Part 261 as follows:

# Part 261—Rules Regarding Availability of Information

1. The authority citation for 12 C.F.R. Part 261 continues to read as follows:

Authority: 5 U.S.C. 552.

- 2. Part 261.4—Records Available to the Public Upon Request, is amended by removing paragraph (g).
- 3. Section 261.8 is added to read as follows:

#### Section 261.8—Fee Schedules: Waiver of Fees

- (a) Fee schedules. Records of the Board available for public inspection and copying are subject to a written Schedule of Fees for search, review, and duplication. (See the Appendix to section 261.8 for Schedule of Fees.) The fees set forth in the Schedule of Fees reflect the full allowable direct costs of search, duplication, and review, and may be adjusted from time to time by the Secretary to reflect changes in direct costs.
- (b) Fees charged. The fees charged only cover the full allowable direct costs of search, duplication, or review.
  - (1) "Direct costs" mean those expenditures which the Board actually incurs in searching for and duplicating (and in the case of commercial requesters, reviewing) documents to respond to a request made under section 261.4 of this Part. Direct costs include, for example, the salary of the employee performing work (the basic rate of pay for the

- employee plus a factor to cover benefits) and the cost of operating duplicating machinery. Not included in direct costs are overhead expenses such as costs of space, and heating or lighting the facility in which the records are stored.
- (2) "Duplication" refers to the process of making a copy of a document necessary to respond to a request for disclosure of records or for inspection of original records that contain exempt material or that otherwise cannot be inspected directly. Such copies may take the form of paper copy, microform, audiovisual materials, or machine readable documentation (e.g., magnetic tape or disk), among others.
- (3) "Review" refers to the process of examining documents located in response to a request that is for a commercial use to determine whether any portion of any document located is permitted to be withheld. It also includes processing any documents for disclosure, e.g., doing all that is necessary to excise them and otherwise to prepare them for release. Review does not include time spent resolving general legal or policy issues regarding the application of exemptions.

#### (c) Commercial use.

- (1) The fees in the Schedule of Fees for document search, duplication, and review apply when records are requested for commercial use.
- (2) "Commercial use request" refers to a request from or on behalf of one who seeks information for a use or purpose that furthers the commercial, trade, or profit interests of the requester or the person on whose behalf the request is made.
- (3) In determining whether a requester properly belongs in this category, the Secretary shall look first to the use to which a requester will put the documents requested. Where a requester does not explain its purpose, or where its explanation is insufficient, the Secretary may seek additional clarification from the requester before categorizing the request as one for commercial use.

#### (d) Educational, research, or media use.

(1) Only the fees in the Schedule of Fees for document duplication apply when records are not sought for commercial use and the requester is a representative of the news media, or an educational

- (2) "Educational institution" refers to a preschool, a public or private elementary or secondary school, an institution of undergraduate higher education, an institution of graduate higher education, an institution of professional education, and an institution of vocational education, which operates a program of scholarly research.
- (3) "Noncommercial scientific institution" refers to an independent nonprofit institution whose purpose is to conduct scientific research.
- (4) "Representative of the news media" refers to any person that is actively gathering news for an entity that is organized and operated to publish or broadcast news to the public. The term "news" means information that is about current events or that would be of current interest to the public. Examples of news media entities include, but are not limited to, television or radio stations broadcasting to the public at large, and publishers of periodicals (but only in those instances when they can qualify as disseminators of "news") who make their products available for purchase or subscription by the general public. "Freelance" journalists may be regarded as working for a news organization if they can demonstrate a solid basis for expecting publication through that organization, even though not actually employed by it.
- (e) Other uses. For all other requests, the fees in the Schedule of Fees for document search and duplication apply. However, there is no charge for the first one hundred pages of duplication or the first two hours of search time.
- (f) Aggregated requests. A requester may not file multiple requests at the same time, each seeking portions of a document or documents solely in order to avoid payment of fees. If the Secretary reasonably believes that a requester or group of requesters is attempting to break a request down into a series of requests for the purpose of evading the assessment of fees, the Secretary may aggregate any such requests and charge accordingly. It is considered reasonable for the Secretary to presume that multiple requests of this type made within a 30-day period have been made to avoid fees.

#### (g) Payment procedures.

(1) Fee payment. The Secretary may assume that a person requesting records pursuant to section 261.4 of this Part will pay the applicable fees, unless a

- request includes a limitation on fees to be paid or seeks a waiver or reduction of fees pursuant to paragraph (h) of this section.
- (2) Advance Notification. If the Secretary estimates that charges are likely to exceed \$25, the requester shall be notified of the estimated amount of fees, unless he has indicated in advance his willingness to pay fees as high as those anticipated. Upon receipt of such notice the requester may confer with the Secretary as to the possibility of reformulating the request in order to lower the costs.

#### (3) Advance payment.

- (i) The Secretary may require advance payment of any fee estimated to exceed \$250. The Secretary may also require full payment in advance where a requester has previously failed to pay a fee in a timely fashion.
- (ii) For purposes of computing the time period for responding to requests under section 261.4(d) of this Part, the running of the time period will begin only after the Secretary receives the required payment.
- (4) Late charges. The Secretary may assess interest charges when fee payment is not made within 30 days of the date on which the billing was sent. Interest will be at the rate prescribed in section 3717 of Title 31 U.S.C.A. and will accrue from the date of the billing. This rate of interest is published by the Secretary of the Treasury before November 1 each year and is equal to the average investment rate for Treasury tax and loan accounts for the 12-month period ending on September 30 of each year. The rate is effective on the first day of the next calendar quarter after publication.
- (5) Fees for nonproductive search. Fees for record searches and review may be charged even if no responsive documents are located or if the request is denied, particularly if the requester insists upon a search after being informed that it is likely to be nonproductive or that any records found are likely to be exempt from disclosure. The Secretary shall apply the standards set out in paragraph (h) of this section in determining whether to waive or reduce fees.

#### (h) Waiver or reduction of fees.

(1) Standards for determining waiver or reduction. The Secretary or his or her designee shall grant a waiver or reduction of fees chargeable under paragraph (b) of this section where it is determined both that disclosure of the information is in the public interest because it is likely to contribute significantly to public understanding of the operations or activities of the government, and that the disclosure of information is not primarily in the commercial

interest of the requester. The Secretary or his or her designee shall also waive fees that are less than the average cost of collecting fees. In determining whether disclosure is in the public interest, the following factors will be considered:

- (i) The subject of the request: whether the subject of the requested records concerns "the operations or activities of the government";
- (ii) The informative value of the information to be disclosed: whether the disclosure is "likely to contribute" to an understanding of government operations or activities;
- (iii) The contribution to an understanding of the subject by the general public likely to result from disclosure: whether disclosure of the requested information will contribute to "public understanding";
- (iv) The significance of the contribution to the public understanding: whether the disclosure is likely to contribute "significantly" to public understanding of government operations or activities;
- (v) The existence and magnitude of a commercial interest: whether the requester has a commercial interest that would be furthered by the requested disclosure; and, if so
- (vi) The primary interest in disclosure: whether the magnitude of the identified commercial interest of the requester is sufficiently large, in comparison with the public interest in disclosure, that disclosure is "primarily in the commercial interest of the requester".
- (2) Contents of request for waiver. The Secretary will normally deny a request for a waiver of fees that does not include:
  - (i) a clear statement of the requester's interest in the requested documents;
  - (ii) the use proposed for the documents and whether the requester will derive income or other benefit from such use;
  - (iii) a statement of how the public will benefit from such use and from the Board's release of the requested documents; and
  - (iv) if specialized use of the documents or information is contemplated, a statement of the requester's qualifications that are relevant to the specialized use.
- (3) Burden of proof. In all cases the burden shall be on the requester to present evidence or information in support of a request for a waiver of fees.
- (4) Employee requests. In connection with any request by an employee, former employee, or applicant for employment, for records for use in prosecuting a grievance or complaint of discrimination against the Board, fees shall be waived where the total charges (including charges for information pro-

vided under the Privacy Act) are \$50 or less; but the Secretary may waive fees in excess of that amount.

# Appendix to Section 261.8 Freedom of Information Fee Schedule

## Duplication:

| Photocopy, per standard page          | \$.08 |
|---------------------------------------|-------|
| Paper copies of microfiche, per frame | \$.07 |
| Duplicate microfiche, per microfiche  | \$.10 |

#### Search and review:

| Clerical (Grades FR4-FR7),   |         |
|------------------------------|---------|
| hourly rate                  | \$8.50  |
| Technical (Grades FR8-FR11), |         |
| hourly rate                  | \$12.80 |
| Management/professional,     |         |
| hourly rate                  | \$25.90 |

#### Computer search and production:

For each request the Secretary will separately determine the actual direct cost of providing the service, including computer search time, tape or printout production, and operator salary.

#### Special services:

The Secretary of the Board may agree to provide, and set fees to recover the costs of, special services not covered by the Freedom of Information Act, such as certifying records or information and sending records by special methods such as express mail. The Secretary may provide self-service photocopy machines and microfiche printers as a convenience to requesters and set separate per-page fees reflecting the cost of operation and maintenance of those machines.

#### Fee waivers:

For qualifying educational and noncommercial scientific institution requesters and representatives of the news media the Board will not assess fees for review time, for the first 100 pages of reproduction, or, when the records sought are reasonably described, for search time. For other noncommercial use requests no fees will be assessed for review time, for the first 100 pages of reproduction, or for the first two hours of search time. For requesters qualifying for 100 free pages of reproduction, the fees for duplicate microfiche will be prorated to eliminate the charge for 100 frames.

456

The Board will waive in full fees that total less than \$4.

The Secretary of the Board or his or her designee will also waive or reduce fees, upon proper request, if disclosure of the information is in the public interest because it is likely to contribute significantly to public understanding of the operations or activities of the government and is not primarily in the commercial interest of the requester. A fee reduction is available to employees, former employees, and applicants for employment who request records for use in prosecuting a grievance or complaint or discrimination against the Board.

ORDERS ISSUED UNDER BANK HOLDING COMPANY ACT, BANK MERGER ACT, BANK SERVICE CORPORATION ACT, AND FEDERAL RESERVE ACT

Orders Issued Under Section 3 of the Bank Holding Company Act

Capital City Bank Group, Inc. Tallahassee, Florida

Order Approving Acquisition of Bank

Capital City Bank Group, Inc., Tallahassee, Florida, a bank holding company within the meaning of the Bank Holding Company Act (12 U.S.C. § 1841 et seq.) ("Act"), has applied for the Board's approval under section 3(a)(3) of the Act to acquire all the voting shares of Gadsden National Bank, Quincy, Florida ("Bank"), a de novo bank.

Notice of the application, affording an opportunity for interested persons to submit comments, has been given in accordance with section 3(b) of the Act (52 Federal Register 2806 (1987)). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 3(c) of the Act (12 U.S.C. § 1842(c)).

Applicant, the sixteenth largest commercial banking organization in Florida, controls eight subsidiary banks, with total deposits of \$434.8 million, representing approximately 0.6 percent of the total deposits in commercial banks in the state. Bank is a *de novo* bank which will assume the deposit liabilities and certain assets of the Quincy branch ("Quincy") of Pioneer Savings Bank, Clearwater, Florida ("Pioneer"). Quincy, the 110th largest banking organization in Florida,

controls total deposits of \$31.4 million, representing less than 0.1 percent of the total deposits in commercial banks in the state.<sup>2</sup> Upon consummation of the proposal, Applicant would remain the sixteenth largest commercial banking organization in Florida, with total deposits of \$466.2 million, representing 0.6 percent of total deposits in commercial banks in the state. Consummation of this proposal would not have a significant effect on the concentration of banking resources in Florida.

Applicant and Quincy compete in the Gadsden banking market.<sup>3</sup> Applicant is the fifth largest of the six commercial banking organizations operating in the market, and controls total deposits of \$12.4 million, representing 8.7 percent of the deposits in commercial banks in the market.<sup>4</sup> Quincy is the second largest banking organization in the market, with deposits of \$31.4 million, representing 22.2 percent of total deposits in commercial banks in the market. The market is considered to be highly concentrated, with the four largest commercial banks controlling 86.4 percent of the deposits in commercial banks in the market. The Herfindahl-Hirschman Index ("HHI") on a banksonly basis is 2299, and would increase by 386 points to 2685 upon consummation of this proposal.<sup>5</sup>

Although consummation of the proposal would eliminate some competition between Applicant and Quincy in the Gadsden banking market, several factors mitigate the anticompetitive effects of this transaction. First, Pioneer will continue to operate two offices in the Gadsden banking market, so the number of competitors will remain the same. In addition, the presence of two thrift institutions that control approximately 19.4 percent of the market's total deposits mitigates the anticompetitive effects of the transaction. Thrift institutions already exert a considerable

<sup>1.</sup> State deposit data are as of June 30, 1986.

<sup>2.</sup> Quincy is treated as a commercial bank in this analysis.

<sup>3.</sup> The Gadsden banking market is approximated by Gadsden County plus part of Jackson County, Florida.

<sup>4.</sup> Market data are as of June 30, 1985.

<sup>5.</sup> Under the revised Department of Justice Merger Guidelines (49 Federal Register 26,823 (June 29, 1984)), a market in which the post-merger HHI is above 1800 is considered highly concentrated. In such markets, the department is likely to challenge a merger that increases the HHI by more than 50 points. The Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indicating anticompetitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by at least 200 points. The Justice Department has stated that the higher than normal HHI thresholds for screening bank mergers for anticompetitive effects implicitly recognizes the competitive effect of limited-purpose lenders and other non-depository financial entities.

<sup>6.</sup> The Board has previously indicated that thrift institutions have become, or have the potential to become, major competitors of commercial banks. National City Corporation, 70 FEDERAL RESERVE BULLETIN 743 (1984); NCNB Bancorporation, 70 FEDERAL RESERVE BULLETIN 225 (1984); General Bancshares Corporation, 69 FEDERAL RESERVE BULLETIN 802 (1983); First Tennessee National Corporation, 69 FEDERAL RESERVE BULLETIN 298 (1983).

competitive influence in the market as providers of NOW accounts and consumer loans. Based upon the above considerations, the Board concludes that consummation of the proposal is not likely to substantially lessen competition in the Gadsden banking market.<sup>7</sup>

The financial and managerial resources of Applicant, its subsidiary banks, and Bank are consistent with approval. Considerations relating to the convenience and needs of the communities to be served are also consistent with approval. Based on the foregoing and other facts of record, the Board has determined that consummation of the proposed transaction would be in the public interest and that the application should be approved.

On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be made before the thirtieth day following the effective date of this Order, or later than three months after the effective date of this Order, and Bank shall be opened for business not later than six months after the effective date of this Order. The latter two periods may be extended for good cause by the Board or by the Federal Reserve Bank of Atlanta, acting pursuant to delegated authority.

By order of the Board of Governors, effective April 21, 1987.

Voting for this action: Chairman Volcker and Governors Johnson, Seger, Angell, and Heller.

JAMES McAFEE
Associate Secretary of the Board

[SEAL]

Crescent Holding Company

Napoleon, Ohio

Order Approving Formation of a Bank Holding Company

Crescent Holding Company, Napoleon, Ohio, has applied pursuant to section 3(a)(1) of the Bank Holding Company Act ("BHC Act" or "Act"), 12 U.S.C. § 1841 et seq., to become a bank holding company by acquiring up to 39 percent of the voting shares of Henry County Bank, Napoleon, Ohio ("Bank").

Notice of the application, affording interested persons an opportunity to submit comments, has been given in accordance with section 3(b) of the Act, 51 Federal Register 43,974 (1986). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 3(c) of the Act.

Applicant is a non-operating company with no subsidiaries formed for the purpose of becoming a bank holding company by acquiring Bank. Bank is the 91st largest commercial banking organization in Ohio, controlling deposits of \$54.8 million representing less than 0.1 percent of the total deposits in commercial banking organizations in the state. None of the principals of Applicant or Bank is associated with any other financial institutions located within the relevant banking market. Accordingly, consummation of this proposal would not have any significant effect on existing or probable future competition, nor would it significantly increase the concentration of banking resources in any relevant banking market or the State of Ohio.

Existing management of Bank has submitted comments opposing this proposal. In addition, the Board has received more than 60 comment letters and petitions in opposition to this proposal from members of the community and customers of Bank.

These commenters are concerned that Bank will cease to be an independent, community-owned bank if this application is approved because Applicant, although locally owned, is acquiring this interest in Bank in order to profit from a sale of Bank to a larger nonlocal bank holding company. In addition, the commenters argue that this proposed transaction will not serve the needs of the community and will adversely affect the future prospects of Bank. They argue that Applicant will not be a source of financial and managerial strength for Bank. Specifically, some commenters suggest that customers will terminate their relationship with Bank if ownership and management changes and that the proposed acquisition of less than an absolute majority of the voting shares of Bank will cause dissension in the management and operation of Bank. Commenters have requested a public hearing on this application.

In response, Applicant has stated its intention to retain Bank as a locally owned, independent bank and has offered to provide Bank a right of first refusal for a period of four years to purchase Bank shares held by Applicant in the event of an offer by a non-local organization. Applicant has stated that it has no plans to make any significant changes in the corporate structure or operations of Bank or in the services

<sup>7.</sup> If 50 percent of deposits held by thrift institutions in the Gadsden banking market were included in the calculation of market concentration, the share of total deposits held by the four largest organizations in the market would be 77.1 percent. Applicant would control 7.8 percent and Bank would control 19.8 percent of the market's deposits. The HHI would increase by 309 points to 2199.

<sup>1.</sup> All banking data are as of September 30, 1986.

<sup>2.</sup> The Henry County banking market is approximated by Henry County, Ohio, except for the townships of Flatrock and Pleasant.

provided by Bank to the community. Applicant has specifically offered to retain Bank's senior management and to expand the board of directors of Bank to permit Applicant's principals to be added rather than to displace existing directors.

The Board has carefully considered the comments in opposition to this proposal. The Board notes that Applicant's principals are local residents or from local families, and several have prior affiliations with Bank. This application does not raise the concerns addressed by many commenters about elimination of an independent, locally controlled bank. Moreover, any future sale by Applicant of its interest in Bank to a larger bank holding company will require Board approval and provide an adequate opportunity to raise concerns about local control.

The Board has evaluated the financial and managerial resources of Applicant and Bank and finds them to be consistent with approval of this application. Applicant has indicated its intention to continue the present policies of Bank and the services that it offers to the community and to do so under the direction of the existing management that has been responsible for implementing those policies.3 Applicant has also indicated that it will assume a limited role in directing the operations of Bank, since Applicant plans to provide for retention of current directors and to promote management from within Bank rather than to assume a direct role in Bank's operational management. Applicant's principals have the financial resources and experience to justify a finding by the Board that financial and managerial considerations are consistent with approval, particularly since Bank's condition is satisfactory. The outpouring of community support for Bank's management and policies supports a conclusion that Bank's policies are meeting the needs of the community and the continued provision of those services to the community Bank serves is consistent with approval of this application.

The commenters also contend that the Board should deny the application in this case because the acquisition by Applicant of a minority interest in Bank would only cause dissension and uncertainty in the management of Bank without permitting Applicant to gain actual control. In this case, however, Applicant will become the largest single shareholder of Bank and is not precluded, as in NBC Co., 60 FEDERAL RESERVE BULLETIN 782 (1974), by an absolute majority shareholder from seeking to acquire a majority of the shares

The position taken by the commenters would preclude the Board from approving any proposal to acquire less than an absolute majority of the shares of a bank holding company if the management of the bank holding company opposes the acquisition. Moreover, as in this case, it would limit arbitrarily the market for the stock of locally owned community banks to the detriment of shareholders. The BHC Act recognizes that control is possible without ownership of an absolute majority of voting shares. After careful review of the comments submitted, Applicant's response to these comments, and all of the facts of record in this case, the Board has determined that the comments submitted do not warrant denial of this application.

The Board has also considered the commenters' requests for a hearing. The BHC Act requires the Board to hold a formal hearing regarding an application submitted under section 3 of the BHC Act only in the event that the state supervisory authority, in the case of a state bank such as Bank, expresses written disapproval of the proposed transaction. This hearing requirement is not triggered in this case because the Superintendent of Banking for the State of Ohio, although suggesting the Board might use a hearing to gather information on the depth of community feeling, has not expressed written disapproval of the proposed transaction.

Further, commenters have been given the opportunity to submit written facts and arguments to the Board regarding this application. There is no indication that the substantial number of comments already before the Board present an incomplete or insufficient basis to permit the Board to evaluate the concerns of the commenters with respect to this application, or that further investigation would produce significant

of Bank over time. The Board has previously permitted acquisitions of less than absolute control where there is a possibility or likelihood that the applicant will eventually gain control, despite claims by management of possible dissension, and where, unlike the NBC Co. case, the applicant or applicant's principals had adequate resources so that the applicant would not be totally dependent upon dividends from Bank to meet its debt servicing requirements. Lloyds Bank, 72 FEDERAL RESERVE BULLETIN 841 (1986); First Jersey National Corporation, 71 FEDERAL RESERVE BULLETIN 638 (1985); and City Holding Company, 71 FEDERAL RESERVE BULLETIN 575 (1985).

<sup>3.</sup> The retention of Bank or its current management is not a condition of the Board's action in this case. The Board expects that all future actions that Applicant takes regarding Bank will be consistent with relevant law, the Board's regulations, this Order, and safe and sound banking practice.

<sup>4. 12</sup> U.S.C. § 1842(b); Northwest Bancorporation v. Board of Governors, 303 F.2d 832, 843-44 (8th Cir. 1962); Grandview Bank & Trust Co. v. Board of Governors, 550 F.2d 415 (8th Cir.), cert. denied, 434 U.S. 821 (1977); and, Farmers & Merchants Bank of Las Cruces v. Board of Governors, 567 F.2d 1082 (D.C. Cir. 1977).

additional facts upon which to base a decision. The Board is aware of the depth of the community concern about the future direction of Bank and the effects of this proposed acquisition. The Board concludes, however, that a hearing would not assist it in gathering additional facts upon which to base its decision and hereby denies the requests of commenters for a hearing.

Based on the foregoing and other facts of record, the Board has determined that the application should be and hereby is approved. This transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Cleveland pursuant to delegated authority.

By order of the Board of Governors, effective April 7, 1987.

Voting for this action: Chairman Volcker and Governors Johnson, Seger, Angell, and Heller.

JAMES MCAFEE

[SEAL]

Associate Secretary of the Board

First Midwest Bancorp, Inc. Naperville, Illinois

Order Approving Merger of Bank Holding Companies

First Midwest Bancorp, Inc., Naperville, Illinois, a bank holding company within the meaning of the Bank Holding Company Act ("Act") (12 U.S.C. § 1842(a)(1)), has applied for the Board's approval pursuant to section 3(a)(5) of the Act (12 U.S.C. § 1842(a)(5)) to merge with Bancorp of Mundelein Inc., Mundelein, Illinois ("Bancorp"), and thereby indirectly to acquire Bank of Mundelein, Mundelein, Illinois ("Mundelein Bank").

Notice of the application, affording interested persons an opportunity to submit comments, has been given in accordance with section 3(b) of the Act. The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 3(c) of the Act.

Applicant is the ninth largest commercial banking organization in Illinois holding deposits of \$1.2 billion, representing 1.2 percent of the total deposits in commercial banking organizations in the state. Mundelein

Bank is among the smaller commercial banking organizations in the state, controlling deposits of \$34.4 million, representing less than one percent of the total deposits in commercial banking organizations in the state. Upon consummation of this proposal, Applicant would remain the ninth largest commercial banking organization in Illinois and would control 1.23 percent of the total deposits in commercial banking organizations in the state. Consummation of this proposal would not result in a significant increase in the concentration of banking resources in Illinois.

Applicant's subsidiary banks compete directly with Mundelein Bank in the Chicago banking market.<sup>2</sup> Currently, Applicant controls less than one percent of the total deposits in commercial banks in the market. Upon consummation, Applicant would be the 33rd largest commercial banking organization in the market, and would continue to control less than one percent of the market's deposits in commercial banks.<sup>3</sup> Accordingly, the Board concludes that consummation of the proposal would not have any significant adverse effect on competition in the Chicago banking market.

In its evaluation of Applicant's managerial resources, the Board has considered certain violations by Applicant's subsidiary banks of the Currency and Foreign Transactions Reporting Act ("CFTRA") and the regulations thereunder.4 Applicant has taken appropriate remedial action as a result of the discovery of these violations. The corrective measures include the implementation of a revised audit program and the development of a compliance monitoring program. The audit program was implemented on March 1, 1987 and Applicant has committed to implement its compliance program at all its subsidiary banks by March 31, 1987. Based on the foregoing and other facts of record, the Board concludes that the managerial resources of Applicant, its subsidiary banks and Bancorp are consistent with approval.

The Board also finds that the financial resources of Applicant are consistent with approval. Applicant will serve as a source of financial and managerial strength for Mundelein Bank. In addition, Applicant has committed that it will maintain adequate capital in Mundelein Bank.

<sup>1.</sup> All banking data are as of December 31, 1985.

The Chicago banking market is approximated by Cook, Lake and DuPage Counties, Illinois. Mundelein Bank and five of Applicant's subsidiary banks are located in Lake County.

<sup>3.</sup> The Chicago banking market is considered unconcentrated, with the four largest commercial banks controlling 50.5 percent of the total deposits in commercial banking organizations in the market. The Herfindahl-Hirschman Index ("HHI") for the market is 807, and would increase by less than 1 point upon consummation of the proposal.

<sup>4. 31</sup> U.S.C. § 5311 et seq.; 31 C.F.R. § 103.

460

In considering the convenience and needs of the communities to be served, the Board has taken into account the records of Applicant and Bancorp under the Community Reinvestment Act ("CRA"), 12 U.S.C. § 2901 et seq.5 The Board has received comments from a Protestant regarding Applicant's CRA record. The Protestant has alleged that Applicant, and specifically its subsidiary bank, First Midwest Bank/North Chicago, Chicago, Illinois ("North Chicago Bank"), have failed generally to comply with the terms of the CRA, and more specifically has failed to serve the credit needs of minority and low- and moderate-income communities within its service area.6

The Board has carefully reviewed the records of Applicant and Bancorp in meeting the convenience and needs of their communities. Initially, the Board notes that, with one exception, all of Applicant's subsidiary banks and Mundelein Bank have achieved satisfactory overall CRA ratings based upon the most recent compliance examinations conducted by the Office of the Comptroller of the Currency.

In response to the Protestant's allegations, the Board has reviewed the record of North Chicago Bank. An analysis of North Chicago Bank's HMDA data for the past five years reveals that relatively little real estate mortgage lending was originated by the Bank during that period. Applicant asserts that it was constrained to deemphasize fixed-rate long-term realestate mortgage lending at the North Chicago Bank in order to match more closely the Bank's asset and liability structure. It appears, moreover, that the majority of the mortgage loans (both by number and dollar amount) originated by North Chicago Bank were within the Bank's service area, and specifically within minority and/or low- and moderate-income areas. Furthermore, when HMDA data of loans originated by Applicant's other bank subsidiaries located near North Chicago Bank are reviewed, it appears that they are also engaged in substantial lending in the North Chicago area.<sup>8</sup> Accordingly, it appears that neither North Chicago Bank nor Applicant is discouraging loans to minority or low-income groups within North Chicago Bank's service area.

Moreover, a review of North Chicago Bank's home improvement lending record reflects a large number (from 58 to 77 percent in dollar amount) of such loans originated within its service area. Analysis of census tract data reveals that low- and moderate-income residents, as well as minority residents of the Bank's service area, received home improvement loans from North Chicago Bank correlative with the number of owner-occupied homes in each area, regardless of each area's racial or income characteristics. In the Board's view, the record does not support the Protestant's assertion that North Chicago Bank used the deposits of minority customers to make loans to affluent customers outside of its service area.

In order to enhance real estate lending activities, North Chicago Bank and Applicant's remaining bank subsidiaries in Lake County, Illinois have established a new mortgage lending program in conjunction with Midwest Mortgage Services, Inc., a secondary market intermediary. This program has recently become operational and Applicant has provided the Board with projections of dollar volumes of mortgage loans to be originated by North Chicago Bank within its service area. <sup>10</sup> Mortgage originations within the service area by year-end 1987 alone are projected to increase over tenfold from year-end 1986 originations. Moreover, Applicant is committed to sustaining this increased level of mortgage lending in its service area to the extent economic conditions allow.

North Chicago Bank also serves the credit needs of its community through its participation in the Illinois Guaranteed Student Loan Program. Applicant expects that the total volume of student loans extended by North Chicago Bank will equal or exceed 1986 levels for each of the next two years. In addition, North Chicago Bank will continue to send representatives to area colleges and universities to inform students of its program, and as well will continue its advertising campaign to increase public awareness of student loan availability at the bank.

<sup>5.</sup> The CRA requires the Board, in its evaluation of a bank holding company application, to assess the record of an applicant in meeting the credit needs of the entire community, including low- and moderate-income neighborhoods, consistent with safe and sound operation.

<sup>6.</sup> The Protestant alleges: that complete Home Mortgage Disclosure Act ("HMDA"), 12 U.S.C. § 2804-11, statements were not available at Mundelein Bank or North Chicago Bank; that Applicant failed to provide him with a map of North Chicago Bank's delineated service area; and that North Chicago Bank used the funds of minority depositors to make loans to affluent white customers outside of its service area. With respect to the first two concerns, Applicant has made the necessary corrections to the HMDA statements and provided Protestant with all requested information.

<sup>7.</sup> That exception is First Midwest Bank/Bradley, Bradley, Illinois ("Bradley Bank"). Applicant has entered into a preliminary agreement to sell its Bradley Bank subsidiary. If Bradley Bank is not sold by April 20, 1987, Applicant has committed to implement a comprehensive CRA program at the institution, including: a comprehensive community survey; design of new consumer-oriented credit products and accompanying advertising program; enhanced contact with community groups; and the filing of quarterly written reports with the Federal Reserve Bank of Chicago regarding CRA compliance.

<sup>8.</sup> HMDA data reflect that for each of the past 5 years from 10 to 48 percent of the conventional real estate lending by these subsidiary banks in total dollar amount (29 to 52 percent of total number of loans originated) occured within North Chicago Bank's designated service area.

North Chicago Bank originated an even higher percentage of its home improvement loans (from 60 to 81 percent) within its service area during this five-year period.

Mortgage loans originated by North Chicago Bank within its service area are projected to increase to \$1.8 million by year-end 1988.

North Chicago Bank also engages in substantial small business lending within its service area. Analysis of loan data reveals that North Chicago Bank extended approximately 50 loans to small businesses in its service area during 1986, representing a substantial portion of its total loan portfolio. North Chicago Bank projects that the volume of new loans to small businesses in its service area will remain at these levels for each of the next two years, and has committed to continue to serve the credit needs of local small businesses beyond that period. In addition, North Chicago Bank will initiate a program of increased officer calls on local businesses to enhance awareness of the Bank's credit and other services available to small businesses.

Accordingly, based upon all the evidence, including the measures proposed by Applicant in order to enhance its provisions of credit and other services to local communities, the Board concludes that convenience and needs considerations are consistent with approval of the application.

Based on the foregoing and other facts of record, the Board has determined that the application should be, and hereby is approved. The acquisition shall not be consummated before the thirtieth calendar day following the effective date of this Order or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or the Federal Reserve Bank of Chicago, pursuant to delegated authority.

By order of the Board of Governors, effective April 6, 1987.

Voting for this action: Chairman Volcker and Governors Johnson, Seger, Angell, and Heller.

JAMES MCAFEE
[SEAL] Associate Secretary of the Board

First Tennessee National Corporation Memphis, Tennessee

Order Approving Acquisition of a Bank

First Tennessee National Corporation, Memphis, Tennessee, a bank holding company within the meaning of the Bank Holding Company Act ("Act") (12 U.S.C. § 1841 et seq.), has applied for the Board's approval under section 3(a)(3) of the Act (12 U.S.C. § 1842(a)(3)) to acquire 90 percent or more of the voting shares of Lebanon Bank, Lebanon, Tennessee ("Bank").

Notice of the application, affording opportunity for interested persons to submit comments, has been

given in accordance with section 3(b) of the Act (52 Federal Register 4385 (1987)). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 3(c) of the Act (12 U.S.C. § 1842(c)).

Applicant is the third largest banking organization in Tennessee, with total deposits of \$3.9 billion, representing 13.0 percent of the total deposits in commercial banks in the state. Bank is the 31st largest banking organization in Tennessee and controls deposits of \$108.5 million, representing 0.4 percent of the deposits in commercial banks in Tennessee. Upon consummation of the proposed transaction, Applicant would remain the third largest banking organization in Tennessee and would control deposits of \$4.0 billion, representing 13.3 percent of state deposits in commercial banks in the state.

Applicant and Bank compete directly in the Nashville banking market.2 Applicant is the fifth largest of 17 commercial banking organizations operating in the market, with total deposits of \$276.7 million, representing 4.4 percent of the total deposits in commercial banks in the market. Bank is the sixth largest commercial banking organization in the market, with total deposits of \$108.5 million, representing 1.6 percent of the total deposits in commercial banks in the market. Upon consummation of the proposal, Applicant's share of the deposits in commercial banks in the market would increase to 6.0 percent. The Nashville banking market is considered to be highly concentrated, with the four largest commercial banks controlling 89.8 percent of the deposits in commercial banks in the market. The Herfindahl-Hirschman Index ("HHI") for the market is 2306 and would increase by 14 points to 2320 upon consummation of the proposal.<sup>3</sup>

Although consummation of the proposal would eliminate some competition between Applicant and Bank in the Nashville market, certain factors mitigate the anticompetitive effects of the proposal. Numerous other commercial banking organizations will continue

<sup>1.</sup> All banking data are as of June 30, 1986.

<sup>2.</sup> The Nashville banking market is approximated by the Tennessee counties of Davidson, Rutherford, Williamson, and Wilson, plus the southern halves of Robertson and Sumner counties.

<sup>3.</sup> Under the revised Department of Justice Merger Guidelines, 49 Federal Register 26,823 (June 29, 1984), a market in which the postmerger HHI is above 1800 is considered highly concentrated. The Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indicating anticompetitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by at least 200 points. The Justice Department has stated that the higher than normal HHI thresholds for screening bank mergers for anticompetitive effects implicitly recognizes the competitive effect of limited-purpose lenders and other non-depository financial entities.

462

to operate in the market after consummation of the proposal. In addition, the increase in concentration in the Nashville banking market is small. Based upon the above considerations, the Board concludes that consummation of the proposal is not likely to substantially lessen competition in the Nashville banking market.

The financial and managerial resources of Applicant, its subsidiary bank, and Bank are consistent with approval of this application.

In considering the convenience and needs of the communities to be served, the Board has also taken into consideration Applicant's and Bank's records under the Community Reinvestment Act (12 U.S.C. § 2901 et seq., ("CRA")). The CRA requires the Board, in its evaluation of a bank holding company application, to assess the record of an applicant in meeting the credit needs of the entire community, including low- and moderate-income neighborhoods, consistent with safe and sound operation of the bank.

The Board notes that Applicant's subsidiary bank, First Tennessee Bank, N.A., Memphis, Tennessee ("First Tennessee"), has a less than satisfactory CRA record. First Tennessee, however, has recently instituted measures to strengthen its CRA compliance programs to the satisfaction of its primary regulator. In this regard, the bank has adopted a formal CRA compliance system to centralize and coordinate its efforts. Moreover, the Board notes that First Tennessee has participated in a range of government-sponsored lending programs and community development programs. Based on these measures and on the Board's own review of First Tennessee's compliance efforts, the Board concludes that convenience and needs considerations are consistent with approval of this application.

Based on the foregoing and other facts of record, the Board has determined that consummation of the proposed transaction would be in the public interest and that the application should be approved. Accordingly, the application is approved for the reasons summarized above. The transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or the Federal Reserve Bank of St. Louis, acting pursuant to delegated authority.

By order of the Board of Governors, effective April 29, 1987.

Voting for this action: Chairman Volcker and Governors Johnson, Seger, Angell, and Heller.

Poplar Bluff Bancshares, Inc. Poplar Bluff, Missouri

Order Approving the Merger of Bank Holding Companies

Poplar Bluff Bancshares, Inc., Poplar Bluff, Missouri, a bank holding company within the meaning of the Bank Holding Company Act of 1956, as amended (12 U.S.C. § 1841 et seq.) ("Act"), has applied for the Board's approval under section 3(a)(5) of the Act to merge with Mingo Bancshares, Inc., Poplar Bluff, Missouri ("Company"), and thereby to acquire all of the voting shares of Puxico State Bank, Puxico, Missouri ("Puxico").

Notice of the application, affording interested persons an opportunity to submit comments, has been given in accordance with section 3(b) of the Act (52 Federal Register 2809 (1987)). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 3(c) of the Act.

Applicant is a one-bank holding company by virtue of its control of First National Bank of Poplar Bluff. Poplar Bluff, Missouri ("Poplar Bluff"). Applicant is the 121st largest commercial banking organization in Missouri, with total deposits of \$37.3 million, representing 0.09 percent of the total deposits in commercial banks in the state. Company is the 289th largest commercial banking organization in Missouri and controls deposits of \$12.8 million, representing 0.03 percent of total deposits in commercial banks in Missouri. Upon consummation of its proposal, Applicant will become the 86th largest commercial banking organization in Missouri and control deposits of \$50.1 million, representing 0.12 percent of the total deposits in commercial banking organizations in the state. Because Applicant's principal already owns a controlling interest in Company, the proposed transaction represents a reorganization of existing ownership interests. Accordingly, consummation of this proposal would not have any significant adverse effect upon the concentration of banking resources in Missouri.

Applicant operates in the Poplar Bluff banking market,<sup>2</sup> where it is the third largest of four commercial banking organizations, controlling 16.5 percent of the total deposits in commercial banks in the market.

JAMES MCAFEE
Associate Secretary of the Board

<sup>1.</sup> All banking data are as of June 30, 1986.

<sup>2.</sup> The Poplar Bluff banking market is approximated by Butler County, Missouri.

Company operates in the Dexter banking market,3 where it is the smallest of five commercial banking organizations, controlling 8.0 percent of the total deposits in commercial banks in the market. Because Poplar Bluff and Puxico operate in different banking markets, consummation of this proposal would not substantially lessen competition in these markets. Applicant's principal also controls four other commercial banking organizations in Missouri, one of which, First State Bank of Dexter, has banking offices in the Dexter market where Puxico operates. Because these banks are currently controlled by the same principal, consummation of the transaction will not lessen competition in the market. Accordingly, the Board believes that competitive considerations under the Act are consistent with approval.

In evaluating this application, the Board also has considered the financial and managerial resources of Applicant, Company, and their subsidiary banks, as well as the chain of affiliated banks controlled by Applicant's principal, within the context of the Board's multi-bank holding company standards. Applicant proposes to merge with Company by means of an exchange of shares and an assumption of debt. In its consideration of this proposal, the Board has taken into account the measures that Poplar Bluff and Puxico have adopted to improve their asset quality. The Board believes these measures should result in continued improvement in the earnings and capital base of Poplar Bluff and Puxico.

In addition, as part of this proposal, the Comptroller of the Currency has approved the merger of Applicant's and Company's subsidiary banks. As a result, consummation of Applicant's proposal would eliminate the need for duplicate operating costs, which in turn would provide further capital support and increased earnings potential. Applicant's principal also has committed to provide continued financial support as necessary for debt servicing. Accordingly, based on the facts of record, the Board believes that the financial and managerial resources of Applicant are consistent with approval of this application.

In addition, considerations relating to the convenience and needs of the communities to be served by Poplar Bluff and Puxico are consistent with approval of this application.

Based on the foregoing and other facts of record, the Board has determined that the application should be, and hereby is, approved. The transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of St. Louis, acting pursuant to delegated authority.

By order of the Board of Governors, effective April 20, 1987.

Voting for this action: Chairman Volcker and Governors Johnson, Seger, Angell, and Heller.

JAMES McAFEE
Associate Secretary of the Board

[SEAL]

Sunwest Financial Services, Inc. Albuquerque, New Mexico

Order Disapproving the Acquisition of a Bank Holding Company

Sunwest Financial Services, Inc., Albuquerque, New Mexico, a bank holding company within the meaning of the Bank Holding Company Act ("Act" or "BHC Act") (12 U.S.C. § 1841 et seq.), has applied for the Board's approval under section 3 of the Act to acquire Rio Grande Bancshares, Inc., Las Cruces, New Mexico ("Company"), and thereby indirectly to acquire First National Bank of Dona Ana County, Las Cruces, New Mexico; First National Bank of Chaves County, Roswell, New Mexico; and First State Bank of Silver City, Silver City, New Mexico. In order to effect the acquisition, Sunwest Financial Corporation, Albuquerque, New Mexico, a wholly owned subsidiary of Applicant, will merge with Company. Sunwest Financial Corporation also has applied to become a bank holding company.

Notice of the application, affording opportunity for interested persons to submit comments and views, has been given in accordance with section 3(b) of the Act. 12 U.S.C. § 1842(b). The time for filing comments has expired, and in acting on the application in light of the factors set forth in section 3(c) of the Act (12 U.S.C. § 1842(c)), the Board has considered all materials submitted concerning the application, including comments from interested parties.

Applicant is the largest banking organization in New Mexico, controlling 12 subsidiary banks with total deposits of \$2.1 billion, representing 26.3 percent of

<sup>3.</sup> The Dexter banking market is approximated by that portion of Stoddard County, Missouri, which lies north of Highways D and H.

<sup>1.</sup> In connection with this application, the Board received comments from the Director of the Financial Institutions Division of the Regulation and Licensing Department of the State of New Mexico urging the Board to consider "the long-term effects the proposed merger would have on New Mexico should it be approved." Specifically, the letter expressed the concern that the resulting organization would be sufficiently large to have the potential for undue political or economic influence in the state.

the total deposits in commercial banks in the state.<sup>2</sup> Company is the sixth largest commercial banking organization in New Mexico, controlling three bank subsidiaries with total deposits of \$253.0 million, representing 3.1 percent of the total deposits in commercial banks in the state.

Applicant and Company each operate banks in three geographic areas in New Mexico: Dona Ana County, Grant County, and Chaves County. As a result, this application raises the question whether consummation of the proposal would substantially lessen competition or in any other manner restrain trade in any section of the country. If consummation of the proposal would have this effect, the Board is prohibited by section 3(c)(2) of the Act from approving the application unless the Board finds that the anticompetitive effects of the proposal are clearly outweighed in the public interest by the convenience and needs of the community to be served. 12 U.S.C. § 1842(c)(2).

After considering all the facts of record with respect to this issue, a majority of the Board members present did not vote to approve the application and, therefore, the application is not approved. As set forth in the attached statements, two members of the Board voted to approve the application on the basis that the proposed acquisition would not substantially lessen competition in any relevant geographic market, while two members voted against approval on the basis of the current record that indicated that the proposed acquisition would substantially lessen competition in two of the three relevant geographic banking markets involved in the proposed acquisition.

By order of the Board of Governors, effective April 3, 1987.

Voting to approve this application: Governors Johnson and Heller. Voting against approval of this application: Chairman Volcker and Governor Angell. Absent and not voting: Governor Seger.

JAMES MCAFEE
[SEAL] Associate Secretary of the Board

STATEMENT BY CHAIRMAN VOLCKER AND GOVERNOR ANGELL

On the basis of the record before the Board, we believe that consummation of the proposed acquisition by Sunwest Financial Services, Inc., Albuquerque, New Mexico of Rio Grande Bancshares, Las Cruces, New Mexico ("Company") would substantially lessen competition in two of the three relevant banking markets in which Applicant and Company compete:

the Las Cruces and Silver City, New Mexico markets. Accordingly, we cannot vote to approve this application. This Statement sets forth the reasons for our conclusion.

Applicant does not dispute the relevant geographic markets used by the Board for analyzing the competitive effects of the proposed acquisition in the Silver City and Roswell, New Mexico areas. Applicant asserts, however, that the Las Cruces banking market should encompass not only the New Mexico county of Dona Ana, where the city of Las Cruces is located, but also the Texas county of El Paso, including the city of El Paso. We disagree.

#### Relevant Geographic Market-Las Cruces

The Board previously has indicated that the relevant geographic banking market must reflect commercial and banking realities and should consist of the localized area where customers can practicably turn for alternatives.<sup>2</sup>

Applying the foregoing principles to the facts contained in the record of this case, including a field investigation of the Dona Ana County and El Paso County areas conducted by staffs of the Federal Reserve Banks of Kansas City and Dallas and the Board, we conclude that the Las Cruces banking market is approximated by Dona Ana County, except the towns of Anthony and Santa Teresa, and does not include El Paso County, Texas.<sup>3</sup> This conclusion is based on our analysis of local patterns of trade and commerce, geographic distribution of deposits and loans, labor force commutation and highway traffic count statistics, and newspaper circulation and broadcast area data.

The Las Cruces area and El Paso area have distinct local trade patterns with little interaction to integrate them commercially. Each city has the resources to meet the basic shopping needs of their citizens, and major state universities operate near each city. Although each city operates specialty shopping malls and

<sup>2.</sup> All banking data are as of June 30, 1986.

<sup>1.</sup> The Silver City banking market is approximated by Grant County, New Mexico. The Roswell banking market is approximated by Chaves County, New Mexico, and the northern one-fourth of Eddy County, New Mexico, including the town of Artesia.

<sup>2.</sup> Pikeville National Corporation, 71 Federal Reserve Bulletin 240 (1985); Dacotah Bank Holding Company, 70 Federal Reserve Bulletin 347 (1984); Wyoming Bancorporation, 68 Federal Reserve Bulletin 313 (1982), aff d, 729 F.2d 687 (10th Cir. 1984); Independent Bank Corporation, 67 Federal Reserve Bulletin 436 (1981).

See, United States v. Philadelphia National Bank, 374 U.S. 321, 357 and 359 (1963); United States v. Phillipsburg National Bank, 399 U.S. 350, 365-65 (1970).

Anthony and Santa Teresa, New Mexico, are part of the El Paso Ranally Metropolitan Area and are included in the El Paso banking market.

El Paso operates a regional hospital in the area, these factors do not indicate enough commercial interaction to warrant including El Paso and Las Cruces in the same banking market. The central business districts of Las Cruces and El Paso are separated by 43 miles, and the two cities are central communities of separate Ranally Metropolitan Areas ("RMAs"), Although Las Cruces and El Paso may be part of a larger regional trade area that includes significant portions of southern New Mexico, western Texas and northern Chihuahua State in Mexico, such regional patterns of trade and commerce are not sufficient to establish that Las Cruces and El Paso are located in the same local banking market.

We note that loan and deposit data provide no indication that banking offices in one area constitute a reasonable alternative source of banking services for residents of the other area. A review of data submitted by Applicant indicates that in terms of dollar volume, Applicant's Las Cruces bank derives only 0.5 percent of its certificates of deposit, 0.5 percent of its demand deposits, and 1.7 percent of its savings deposits from El Paso County. In terms of dollar volume, the bank generates only 0.3 percent of its installment loans and 1.7 percent of its commercial loans in El Paso County. Company's Las Cruces bank derives 4.9 percent of its aggregate deposits and 8.6 percent of its aggregate loans from customers in Texas. 6 Much of this overlap, however, appears to result from Company's two Las Cruces bank branches in the New Mexico cities of Santa Teresa and Anthony, both suburbs of El Paso across the Texas state line. These two branches report combined deposits of \$31.3 million or 15.1 percent of the total deposits of Company's Las Cruces bank. The Las Cruces area branches of Company's Las Cruces bank do not appear to generate significant loan or deposit business in the El Paso area.7

In analyzing this case, we also considered interviews conducted by the Board and Reserve Bank staff with numerous bankers and other lenders in the Las Cruces and El Paso areas. The bankers in one city stated that they generally would not solicit loans from residents in the other city. Evidence from field inter-

views and other sources (such as geographic loan distribution data furnished by Applicant) also indicate that an El Paso bank generally would not consider making loans in the Las Cruces area unless requested to do so by an El Paso customer conducting business (or with a business project) in Las Cruces, or unless the loan were for an unusually large amount. Officials of the El Paso regional office of the Small Business Administration ("SBA") stated that of all SBA guaranteed loans made by El Paso banks in the past two years, only two were extended to Las Cruces area customers. On the basis of these facts, it appears that banks in the Las Cruces and El Paso areas do not regard banks in the other area as being within a common banking market.

Commuting patterns traditionally have provided important indications of economic and commercial integration in defining banking markets. Employment commuting between El Paso and Las Cruces appears to be insignificant. Of the 168,683 persons residing in El Paso County and reporting their place of work in conjunction with the 1980 Census, 2,979 persons (1.8 percent) were employed in Dona Ana County, and only 240 persons (or 0.1 percent) were employed in Las Cruces. Of the 31,178 persons residing in Dona Ana County and reporting their place of work in the 1980 Census, 2,183 persons (7.0 percent) were employed in El Paso County. Of the 16,171 persons residing in the city of Las Cruces, however, only 216 (1.3 percent) were employed in El Paso County. It appears the labor force commuting into El Paso County from nearby New Mexico originates largely from Dona Ana County communities that are remote suburbs of El Paso. We therefore conclude that these communities properly are included in the El Paso, rather than the Las Cruces banking market.

Traffic flow data collected by the Federal Highway Administration in 1985 show an average of about 20,000 vehicles traveling between Las Cruces and El Paso each day. Much of the traffic flow, however, is attributed to vehicles engaged in long distance travel over Interstate Highways 10 and 25, two major cross country routes converging south of Las Cruces. Another substantial portion of the traffic flow between El Paso and nearby areas of New Mexico is attributed to work-related commuting and supply traffic into the White Sands Missile Range. As of March 31, 1986, that facility employed 9,521 persons, of which approximately 36 percent lived in El Paso.

We also observe that newspaper circulation and broadcast transmission data for the El Paso and Las Cruces areas provide little indication that residents in one area are well informed about banking services in the other. The major El Paso newspaper, the El Paso Times, delivers 3.2 percent of its daily press run of 87,271 copies to Las Cruces. The major Las Cruces

<sup>4.</sup> Rand McNally Commercial Atlas and Marketing Guide, Chicago: Rand McNally and Company, 1986.

<sup>5.</sup> United States Bureau of Census.

<sup>6.</sup> Applicant provided no breakdown of these data to reflect the distribution of loans and deposits in the El Paso area.

<sup>7.</sup> Applicant submitted certain data on check clearing at its Las Cruces bank, in an effort to show a significant commercial linkage of El Paso with Las Cruces. We regard this check clearing data as ambiguous, however, and can reach no determination from the data as to whether residents of one area regard the other area as a significant alternative source of goods and services.

newspaper, The Las Cruces Sun-News, does not distribute any of its daily press run to El Paso, however. While Las Cruces has only one television station with limited programming, El Paso television programming is transmitted to the Las Cruces area, giving banks in Las Cruces the option of reaching Las Cruces area consumers through advertising on El Paso stations. There is no indication, however, that Applicant's expenditures for advertising on El Paso television stations are intended to market its services to El Paso rather than Las Cruces area residents. Neither Applicant nor Company advertises its services in any other broadcast medium originating in El Paso. Based on relevant broadcast transmission and newspaper circulation data, we find that there is minimal commercial interaction between the Las Cruces and El Paso areas.

#### Competitive Effects-Las Cruces Banking Market

Within the relevant Las Cruces banking market, Applicant is the fourth largest of six commercial banking organizations, controlling deposits of \$42.9 million, representing 9.9 percent of the total deposits in commercial banks in the market.8 Company is the largest banking organization in the market, controlling deposits of \$191.0 million, which represents 43.9 percent of the total deposits in commercial banks in the market. The Las Cruces banking market is highly concentrated, with the four largest commercial banks controlling 94.4 percent of the deposits in commercial banks in the market. Upon consummation of the proposed acquisition of Company, Applicant would become the largest commercial banking organization in the market, controlling \$234.0 million in deposits, representing 53.8 percent of the market. The four-firm concentration ratio would increase by 3.6 percentage points to 98.0 percent, and the number of commercial banking competitors would be reduced from six to five. The Herfindahl-Hirschman Index ("HHI") for the market would increase by 868 points to 3738, and would be subject to challenge under the Department of Justice ("DOJ") Merger Guidelines.9

In previous decisions, the Board has indicated that thrift institutions have become, or at least have the potential to become, major competitors of commercial banks. 10 In this instance, however, we conclude that the substantial anticompetitive effects of the transaction are not sufficiently mitigated by the presence of thrift institutions in the Las Cruces banking market to allow for approval of the proposed acquisition. The record indicates that six thrift institutions operate in this market and control 33.2 percent of the total deposits in the market. If, in accordance with Board practice, 50 percent of the deposits held by thrift institutions were included in the calculation of market statistics, Applicant and Company would have market shares of 7.9 percent and 35.2 percent, respectively. The four-firm concentration ratio would be 75.6 percent. Upon consummation of the proposal, Applicant would become the largest commercial banking organization with a 43.1 percent market share. The four-firm concentration ratio would increase by 5.7 percentage points to 81.3 percent, and the HHI would increase by 557 points to 2487.11 On the basis of the substantial increase in concentration in the market, even after giving substantial weight to the competition afforded by thrift institutions, and Applicant's resulting dominant position in the market, we believe that consummation of this proposal would substantially lessen competition in the Las Cruces banking market.

We have considered Applicant's contention that, in evaluating market concentration, the competitive effects of credit unions and other financial institutions that provide loan and deposit services should be taken into account. In delineating the relevant product market in which to assess the probable competitive effects of a bank acquisition or merger, the Supreme Court has determined that "commercial banking" is the appropriate line of commerce<sup>12</sup> on the basis that the

<sup>8.</sup> Market data are as of June 30, 1986.

<sup>9.</sup> Under the revised Department of Justice Merger Guidelines, 49 Federal Register 26,823 (June 29, 1984), any market in which the postmerger HHI is above 1800 is considered highly concentrated. The Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indicating anticompetitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by at least 200 points. The Justice Department has stated that the higher than normal HHI thresholds for screening bank mergers for anticompetitive effects implicitly recognizes the competitive effect of limited-purpose lenders and other nondepository financial entities.

<sup>10.</sup> National City Corporation, 70 FEDERAL RESERVE BULLETIN 743 (1984); NCNB Bancorporation, 70 FEDERAL RESERVE BULLETIN 225 (1984); General Bancshares Corporation, 69 FEDERAL RESERVE BULLETIN 802 (1983); First Tennessee National Corporation, 69 FEDERAL RESERVE BULLETIN 298 (1983).

<sup>11.</sup> If 100 percent of the deposits of thrift institutions were included in the Las Cruces banking market, an assessment that these members of the Board deems unwarranted in this case, Applicant and Company would control 6.6 and 29.4 percent, respectively, of total deposits in the market. Upon consummation of the proposal, Applicant would become the largest depository organization in the market, controlling 36.0 percent of the deposits in the market. The HHI would increase by 388 points to 1915 and the market would become highly concentrated. Thus, even with full inclusion of thrift deposits in the market, Applicant's proposal would be subject to challenge under the DOJ Merger Guidelines.

<sup>12.</sup> United States v. Philadelphia National Bank, 374 U.S. 321, 356 (1963). In United States v. Phillipsburg National Bank, 399 U.S. 350 (1970), the Court stressed that banks were the only financial institution in which a wide variety of financial products and services were gathered in one place and that this "clustering" of financial products and services facilitated convenient access to them for all banking customers.

"cluster of products . . . and services" provided by commercial banks is unique relative to other institutions. In United States v. Connecticut National Bank, 13 the Court rejected the contention that savings banks should be included in the commercial banking line of commerce because of their lack of competition with banks in the provision of certain products and services. The Court acknowledged, however, that at the same point in the development of savings banks, their products and economic behavior could make them indistinguishable from commercial banks for purposes of the antitrust laws. The Court noted particularly that "that point may well be reached when and if savings banks become significant participants in the marketing of bank services to commercial enterprises." 418 U.S. at 666.

Since the Connecticut National decision, legislation at the federal and state level has significantly expanded the power of thrifts, such that they are now in many cases direct competitors or potentially direct competitors of commercial banks. The Board has recognized these developments in the powers and competitive importance of thrifts and accordingly, as in this case, has given substantial weight to such institutions in its analysis of the competitive effects of a bank merger or acquisition.

This expansion of the powers of thrift institutions as well as the expansion of the products and services of other non-depository members of the financial services industry in recent years has raised the question whether the "commercial banking" line of commerce enunciated in the Philadelphia National and Connecticut National cases should be retained or modified. In this case, we acknowledge the existence in the Las Cruces banking market of credit unions, consumer and commercial finance companies, securities brokerage firms, and other providers of financial services. We do not believe, however, that the record in this case provides evidence to allow us to determine the extent and nature of the services these institutions offer or whether they constitute effective competitive alternatives to bank products and services. Nonetheless, we are willing to consider any additional facts or information that Applicant may be able to submit regarding this issue.

Competitive Effects—Silver City Banking Market

In the Silver City market, Applicant is the largest of three commercial banking organizations and controls total deposits of \$68.1 million, representing 49.2 percent of the total deposits in commercial banks in the market. Company is the smallest banking organization, controlling total deposits of \$10.6 million, representing 7.6 percent of the total deposits in commercial banks in the market. The Silver City banking market is considered highly concentrated with a three-firm concentration ratio of 100 percent and an HHI of 4340 points. Upon consummation of this proposal, Applicant would remain the largest banking organization in the market and would control total deposits of \$78.7 million, representing 56.8 percent of deposits in commercial banks in the market. The Silver City market would remain highly concentrated and only two banks would operate in the market. The HHI would increase by 752 points to 5092. On the basis of commercial bank deposits only, we consider the effect of this acquisition on existing competition in the Silver City market to be substantially adverse.

Moreover, we do not believe that the anticompetitive effects of this transaction in the market are sufficiently mitigated by the presence of thrift institutions to allow for approval of the acquisition. Two thrifts operate in the market and control 29.6 percent of the total deposits in the market. The record indicates, however, that these firms offer commercial and industrial loans, commercial checking accounts, and consumer installment loans only to a limited extent. Even if 50 percent of the deposits held by thrifts were included in the calculation of market statistics, Applicant would control a 40.6 percent market share. Company would be the fourth largest depository institution, with a 6.3 percent market share. The four-firm concentration ratio would be 94.1 percent. Upon consummation, Applicant would control a 46.9 percent market share, and the market would remain highly concentrated, with the four-firm concentration ratio of 100 percent. The HHI would increase by 513 points to 3642.

The BHC Act authorizes the Board to approve a proposal even if the effect of the transaction would otherwise be substantially anticompetitive if the "anticompetitive effects of the transaction are clearly outweighed in the public interest by the convenience and needs of the community to be served."14 The facts of record do not support Applicant's contention that the anticompetitive effects of its proposal are mitigated by adverse economic conditions in the Silver City market and by the poor prospects for financial viability of its Silver City bank. Economic conditions in the Silver City market are significantly affected by the local copper mining industry. That industry is depressed throughout New Mexico as a result of foreign competition, weakened demand, and excess capacity in the mining industry. Although the poor condition of the

<sup>13. 418</sup> U.S. 656, 660-66 (1974).

<sup>14. 12</sup> U.S.C. § 1843(c)(2).

mining industry has had a depressive effect on the local economy, available data show that other economic forces have had offsetting favorable effects in the Silver City banking market.

The total population in the Grant County area has remained stable over the three-year period ending in August 1986. During this same period, unemployment decreased from 17.4 percent to 12.3 percent. During a two-year period ending December 31, 1985, commercial bank deposits in Grant County increased at an annual rate of 9.6 percent, compared to 3.7 percent for statewide commercial bank deposits during the same period. We note that Company undertook to charter its Silver City bank in 1982, at a time when economic conditions in Grant County were severely depressed. Since the bank opened for business, moreover, it has reported reasonably strong deposit growth (total deposits of \$10.6 million as of June 30, 1986) and, since its creation, has operated in satisfactory financial condition.

We therefore conclude that the prospects for commercial bank profitability and long-term viability in the Silver City banking market are not unfavorable. Accordingly, neither the condition of the local economy nor the condition of Applicant's or Company's Silver City banks may be regarded as factors that would mitigate the substantial anticompetitive effects of the proposed transaction.

#### Competitive Effects—Roswell Banking Market

In the Roswell banking market, Applicant is the largest of seven commercial banking organizations, controlling deposits of \$112.6 million, representing 22.2 percent of the total deposits in commercial banks in that market. Company is the smallest commercial banking organization in the Roswell market, controlling deposits of \$13.0 million, representing 2.6 percent of the total deposits in commercial banks in the market. The Roswell banking market is considered highly concentrated with a four-firm concentration ratio of 81.7 and an HHI of 1815. Upon consummation of the proposed acquisition, the four-firm concentration ratio would increase by 2.6 points to 84.3 percent, and the HHI would increase by 113 points to 1928. Applicant would remain the largest commercial banking organization, and would control deposits of \$125.6 million, representing 24.7 percent of the deposits in commercial banks in the market. Although consummation of this transaction would eliminate some existing competition in the Roswell banking market, we believe that the competition eliminated would not be substantial.

We also have considered the presence of thrift institutions in the Roswell market to alleviate the adverse competitive effects of Applicant's proposal. In this case, four thrift institutions control 43.0 percent of the total deposits in all commercial banks and thrifts. Thrifts also compete directly with banks in the Roswell market to offer a wide range of consumer services and transaction accounts and some commercial and industrial loans.15

No adverse competitive effects would arise in the El Paso banking market, 16 where, in the cities of Anthony and Santa Teresa, Company's Las Cruces bank operates two branches. Because Applicant does not currently operate a banking office in the El Paso market, consummation of the proposal would not eliminate any existing competition in this market. Consummation of this proposal would not eliminate any significant probable future competition in the El Paso market.

In light of our conclusion on the basis of the record presently before the Board that the proposed acquisition would result in a substantial lessening of competition in the Las Cruces and Silver City banking markets, we are unable to vote to approve this application.

## STATEMENT BY GOVERNORS JOHNSON AND HELLER

Although this application did not receive the necessary majority for Board approval on the basis of the present record before the Board, we believe it is important to state the reasons why we would not object to approval of this application.

We believe that consummation of the proposal would not substantially reduce competition in any relevant market. We believe that the concentration ratios and other statistics set out in the statement of the other Board members do not reflect the true state of competition in the Las Cruces and Silver City markets. While these statistics give consideration to the competition afforded by savings and loan institutions, they ignore the substantial competition banks face from a broad array of products and services provided by other financial institutions in these markets.

Since 1974, the last time the Supreme Court considered the appropriateness of commercial banking as a distinct line of commerce, the powers of thrift institutions have been broadly expanded, and they are now

16. The El Paso banking market is approximated by El Paso County, Texas, plus the towns of Anthony and Santa Teresa in Dona Ana County, New Mexico.

<sup>15.</sup> If 50 percent of deposits held by thrift institutions in the Roswell banking market were included in the calculation of market concentration, the share of total deposits held by the four largest organizations in the market would be 59.3 percent. Applicant would control 16.1 percent of the market's deposits and Company would control 1.9 percent of the market's deposits. The market would remain moderately concentrated, and the HHI would increase by 59 points to 1233.

providing in many areas, or have the potential to provide, checking accounts, commercial lending, and other products and services traditionally offered by commercial banks. In addition, there are a variety of financial products offered by nondepository institutions that are reasonably interchangeable with and compete with bank products. These products are offered by mortgage banking firms, securities brokerage firms, insurance companies, consumer and commercial finance companies, and other financial institutions. Moreover, consumers are no longer confined to their neighborhood bank as the sole source of banking services. Improved technology, communications, and marketing has broadened significantly the alternatives available to customers for both credit and deposit services.

In our judgment, these significant developments in the financial services industry in recent years have seriously eroded the commercial banking product market that the Board and the courts have traditionally used in analyzing bank mergers. That product market was developed at a time when commercial banks provided a unique cluster of products and services, a situation that no longer prevails in most banking markets.

This case, in our view, demonstrates the need for a reassessment by the Board of the method it uses to evaluate the competitive effects of bank acquisitions and mergers to take into account the fundamental transformation the financial services industry has undergone in recent years and the significant competitive influence exerted in local banking markets by thrifts, credit unions, securities and insurance companies, consumer and commercial finance companies, and other providers of bank-like products and services. We recognize that this would be a fundamental change in policy that must be supported by an adequate record that demonstrates the competitive vitality of these alternative providers of banking products and services. Accordingly, we would welcome this information to support applications for acquisitions where competitive problems otherwise might be present.

# Union Planters Corporation Memphis, Tennessee

Order Approving Acquisition of a Bank Holding Company

Union Planters Corporation, Memphis, Tennessee, a bank holding company within the meaning of the Bank Holding Company Act ("Act"), 12 U.S.C. § 1841 et seq., has applied for the Board's approval under

section 3 of the Act, to acquire 90 percent of the voting shares of Merchants State Holding Company, Humboldt, Tennessee ("Merchants"), and thereby indirectly to acquire Merchants State Bank, also of Humboldt ("Bank").

Notice of the application, affording interested persons an opportunity to submit comments, has been duly published (52 Federal Register 2809 (1987)). The time for filing comments has expired, and the Board has considered the application and all comments received, including those of The National Association of Life Underwriters and the The National Association of Professional Insurance Agents, in light of the factors set forth in section 3(c) of the Act.

Applicant is the fifth largest commercial banking organization in Tennessee, with deposits of \$1.4 billion, representing 4.8 percent of the total deposits in commercial banking organizations in the state. Bank, with deposits of \$78.9 million, is among the smaller commercial banking organizations in Tennessee, controlling less than I percent of the total deposits in commercial banking organizations in the state. Upon consummation of this proposal, Applicant would remain the fifth largest commercial banking organization in Tennessee, controlling deposits of \$1.5 billion, representing 5.0 percent of total deposits in commercial banking organizations in the state. Consummation of the proposal would not have any significant adverse effect on the concentration of commercial banking resources in Tennessee.

Both Applicant and Bank compete in the Gibson County banking market.<sup>2</sup> Applicant is the fourth largest of thirteen commercial banking organizations in the market, with deposits of \$25.1 million, representing 7.4 percent of the total deposits in the market. Bank is the largest commercial banking organization in the Gibson County market, controlling 20.9 percent of the total deposits in commercial banking organizations in the market. Upon consummation of the proposal, Applicant would become the largest commercial banking organization in the market, with a 28.3 percent market share.<sup>3</sup>

Although consummation of the proposal would eliminate some existing competition between Applicant and Bank in the Gibson County banking market, numerous other commercial banks would remain as

<sup>1.</sup> Statewide banking data are as of June 30, 1986.

The Gibson County banking market is approximated by Gibson County. Tennessee.

<sup>3.</sup> Market data are as of June 30, 1985. The Gibson County banking market is considered to be moderately concentrated, with the four largest commercial banking organizations controlling 58.3 percent of the total deposits. Upon consummation of this proposal, the Herfindahl-Hirschman Index ("HHI") would increase by 311 points to 1,456 and the four-firm concentration ratio would increase to 64.3 percent. The market would remain moderately concentrated.

470

competitors in the market. In addition, three thrift institutions compete with commercial banks in the Gibson County banking market, controlling 20.8 percent of the combined deposits in banks and thrifts in the market. All of the thrift institutions in the Gibson County banking market offer consumer loans and two offer commercial loans, in addition to traditional thrift services. Based upon the above considerations, the Board concludes that consummation of the proposal is not likely to substantially lessen competition in the Gibson County banking market.<sup>4</sup>

The Board has considered the effect of the proposal on probable future competition in the other banking markets where Applicant has branch offices, in light of its proposed guidelines for assessing the competitive effects of market extension mergers and acquisitions.5 In evaluating the effects of a proposed acquisition upon probable future competition, the Board considers market concentration, the number of probable future entrants into the market, the size and market position of the bank to be acquired, and the attractiveness of the market for entry on a de novo basis, absent approval of the acquisition. After consideration of these factors, the Board concludes that consummation of this proposal would not have any significant adverse effects on probable future competition in any relevant market.6

In connection with Applicant's proposal, The National Association of Life Underwriters and the National Association of Professional Insurance Agents ("Protestants") submitted comments opposing approval of this application, alleging that Bank, by making available to its depositors membership in The Financial Services Association ("FSA"), a nationwide organization offering various free or discounted services, including accidental death and travel insurance benefits, is engaged in the sale of life insurance. Such action is prohibited under the amendments to section 4 of the Act, contained in the Garn-St Germain Depository Institutions Act of 1982 ("Garn-St Germain Act").

Bank does not function as an insurance agent, as it neither advertises nor sells insurance policies. The insurance is offered as a benefit, along with other benefits, to depositors who become FSA members. Bank receives no compensation in connection with the insurance its depositors receive by virtue of their FSA membership. On these facts, Bank cannot be characterized as engaged in the sale of insurance. Indeed, by making available FSA membership to its customers, Bank's activity is closely analogous to the routine placement by banks, for a fee, of "statement stuffers" from various organizations in the monthly account statements mailed to depositors.

The insurance agency activities that are the subject of the Garn-St Germain Act prohibitions cited by the Protestants, in contrast, concern fee or commission income accruing to the bank holding company or its subsidiaries from the sale of insurance.<sup>8</sup> In this instance, the Bank receives no income from the insurance offered by FSA. Accordingly, the offering of FSA membership does not appear to fall within the Garn-St Germain Act insurance prohibitions.

Based upon the above facts, the Board has determined that Bank is not engaged in an independent, entrepreneurial activity for purposes of section 4(a)(2) of the Act, in connection with the accidental death and

Bank, as a sponsor member of FSA, makes FSA membership available to its non-business checking account depositors. Depositors who are FSA members pay monthly dues to the Bank and in return receive from FSA a series of benefits, including group accidental death and travel insurance.7 The entire portion of the FSA membership dues attributable to the purchase of insurance and other nonbanking benefits is passed by Bank to FSA. The Bank retains only that portion of FSA membership dues attributable to recovering its costs (and earning a slight margin) on the establishment and maintenance of its depositors' accounts, without regard to the provision of insurance by FSA to such depositors. Thus, Bank's depositors receive insurance coverage by virtue of their membership in FSA, and not by virtue of being Bank's depositors or by purchasing insurance from Bank.

<sup>4.</sup> If 50 percent of deposits held by thrift institutions in the Gibson County banking market were included in the calculation of market concentration, Applicant would control 6.6 percent and Bank would control 18.5 percent of the market's deposits. Upon consummation, the HHI would increase by 243 points to 1201.

<sup>5. &</sup>quot;Policy Statement of the Board of Governors of the Federal Reserve System for Assessing Competitive Factors Under the Bank Merger Act and the Bank Holding Company Act," 47 Federal Register 9017 (March 3, 1982). While the proposed policy statement has not been approved by the Board, the Board is using the policy guidelines as part of its analysis of the effect of a proposal on probable future competition.

<sup>6.</sup> Bank, with assets of \$93.7 million, is not considered to be a probable future entrant into the banking markets in which Applicant operates branch offices.

<sup>7.</sup> Other FSA benefits include: travel discounts; member magazines; no-service-charge checking; personalized club checks; nation-wide personal check cashing privileges; the provision of travelers checks, cashiers checks and money orders without charge; local merchant discounts; and an association membership card.

<sup>8.</sup> For example, Exemption C (allowing bank holding companies located in places with a population not exceeding 5,000 to engage in insurance agency activities) and Exemption F (allowing bank holding companies with assets of \$50 million or less to engage in similar activities) were designed to allow small banking organizations to generate income from insurance sales in order to take advantage of tax benefits designed to facilitate the ownership and transfer of small banks. See e.g., H.R. Rep. No. 845, 96th Cong., 2d Sess. 5, 6 (1980); and 126 Cong. Rec. H4871 (daily ed. June 12, 1980) (remarks of Rep. McGuire).

travel benefits made available through FSA to its members who are depositors of Bank. Accordingly, the availability of insurance through the FSA membership offered to Bank's depositors is not an activity subject to the prohibitions of the Act.9

In its evaluation of Applicant's managerial resources, the Board has considered certain violations by Applicant's subsidiary bank, Union Planters National Bank of Memphis, Memphis, Tennessee, of the Currency and Foreign Transactions Reporting Act ("CFTRA") and the regulations thereunder. Applicant has taken appropriate remedial action to correct such violations and prevent their recurrence. The corrective measures include the development of a new compliance policy, enhanced audit procedures, and compliance-procedure meetings with branch managers. In addition, the Office of the Comptroller of the Currency has indicated that all violations were corrected at its most recent compliance examination.

Based on the foregoing and other facts of record, the Board concludes that the financial and managerial resources and future prospects of Applicant, Merchants, and Bank are consistent with approval of the proposal. Considerations relating to the convenience and needs of the communities to be served also are consistent with approval.

Based on the foregoing and other facts of record, the Board has determined that the application should be, and hereby is, approved. This transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or the Federal Reserve Bank of St. Louis, acting pursuant to delegated authority.

By order of the Board of Governors, effective April 21, 1987.

Voting for this action: Chairman Volcker and Governors Johnson, Seger, Angell, and Heller.

JAMES MCAFEE
[SEAL] Associate Secretary of the Board

# U.S. Bancorp Portland, Oregon

Order Approving Acquisition of a Bank Holding Company

U.S. Bancorp, Portland, Oregon, a bank holding company within the meaning of the Bank Holding Company Act (12 U.S.C. § 1841 et seq. ("Act")), has applied for the Board's approval under section 3 of the Act to acquire Valley National Corporation, Forest Grove, Oregon ("Company"), and thereby indirectly to acquire Valley National Bank of Oregon, Forest Grove, Oregon ("Bank").

Notice of the application, affording an opportunity for interested persons to submit comments, has been given in accordance with section 3(b) of the Act (52 Federal Register 3346 (1987)). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 3(c) of the Act (12 U.S.C. § 1842(c)).

In 1980, the Board denied Applicant's proposal to acquire Bank. The Board's denial was based on the substantial adverse competitive effect in the Portland banking market that would have resulted from consummation of the proposal. In addition, the Board concluded that consummation of the proposal would reverse the trend of deconcentration in the state of Oregon, which exhibited one of the highest levels of concentration of banking resources in the country. Applicant now asserts that the competitive circumstances in the state and the relevant banking market have changed since 1980 such that consummation of the proposal would not have a substantial anticompetitive effect in any relevant banking market.

The Board has considered the record of this case in light of developments since 1980 and has determined that the effect of the proposed acquisition is not likely substantially to lessen competition in any relevant banking market. Since the Board denied Applicant's 1980 proposal, the financial services industry has undergone significant changes. The Consumer Checking Account Equity Act of 1980<sup>2</sup> authorized thrift institutions to offer NOW accounts, and the Garn-St Germain Depository Institutions Act of 1982<sup>3</sup> greatly expanded the commercial lending powers of federal thrift institutions. In addition, regulatory actions by the Federal Home Loan Bank Board and various state

<sup>9.</sup> In addition, the Protestants implicitly argue that the Act's nonbanking prohibitions, including the Garn-St Germain Act insurance prohibitions, apply to the activities of state bank subsidiaries of a bank holding company as well as to the activities of a bank holding company and its nonbanking subsidiaries. The Board previously has determined that it is appropriate to reserve judgment on the issue of the applicability of the prohibitions of the Act to state bank subsidiaries of bank holding companies and to resolve the matter in the context of pending rulemaking proceedings. NCNB Corporation, 72 FEDERAL RESERVE BULLETIN 57 (1986).

<sup>1.</sup> U.S. Bancorp, 67 Federal Reserve Bulletin 60 (1981).

<sup>2.</sup> Title III, 96 Stat. 132, 145, codified at 12 U.S.C. § 1832. 3. Title III, 96 Stat. 1469, 1499-1500, codified at 12 U.S.C. § 1464(c)(1).

statutes also have significantly expanded the services that thrifts may offer. In recognition of these developments, the Board in recent years has included thrift institutions in its analysis of the competitive factors of an acquisition or merger because of the competitive alternatives offered by these institutions. In addition, Oregon now permits out-of-state bank holding companies to expand into Oregon.

Applicant, the largest commercial banking organization in Oregon, controls four subsidiary banks with total deposits of \$5.3 billion, representing approximately 39.4 percent of total deposits in commercial banks in the state.<sup>6</sup> Company is the tenth largest commercial banking organization in the state, with total deposits of \$79.0 billion, representing 0.6 percent of the total deposits in commercial banks in the state. Upon consummation of the proposed transaction, Applicant would control deposits of \$5.4 billion, representing 40.0 percent of the total deposits in commercial banks in the state. The state of Oregon would remain highly concentrated with the four largest commercial banking organizations controlling 80.1 percent of the deposits in commercial banks in the state.

Although the Board is concerned about the increase in the concentration of banking resources within the state, certain conditions that would exist after the proposed merger mitigate that concern. The Board notes that 39.6 percent of the combined deposits of banks and thrift institutions in the state are controlled by thrift institutions that compete actively with commercial banks throughout the state. Two of the four depository institutions with deposits of over \$1.0 billion are thrifts, while the other two are commercial banks. If 50 percent of deposits held by thrift institutions in the state were included in the calculation of statewide concentration, the share of total deposits held by the four largest organizations in the market would be 63.0 percent. Based upon these facts, the Board does not believe consummation of this proposal would have any significant effect on the concentration of banking resources in Oregon.

Both Applicant and Company compete directly in the Portland banking market.<sup>7</sup> Applicant is the largest of 29 commercial banking organizations operating in the market, and controls total deposits of \$2.5 billion, representing 39.2 percent of the deposits in commercial banks in the market. Company is the tenth largest commercial banking organization in the market, with total deposits of \$49 million, representing 0.8 percent of market deposits. Upon consummation of the proposal, Applicant's share of the deposits in commercial banks in the market would increase to 40.0 percent. The Portland banking market is considered to be highly concentrated, with the four largest commercial banks controlling 81.7 percent of the deposits in commercial banks in the market. The Herfindahl-Hirschman Index ("HHI") for the market is 2448, and would increase by 60 points to 2508 upon consummation of the proposal.8

Although consummation of the proposal would eliminate some existing competition between Applicant and Company in the Portland banking market, 27 other commercial banking organizations would remain as competitors in the market. In addition, the presence of twelve thrift institutions, controlling approximately 39.6 percent of the market's total deposits, mitigates the anticompetitive effects of the transaction. As noted earlier, thrift institutions already exert a considerable competitive influence as providers of a wide array of deposits and lending services to consumers and commercial customers. Based upon the above considerations, the Board concludes that consummation of the proposal is not likely substantially to lessen competition in the Portland banking market.9

The financial and managerial resources of Applicant, its subsidiary banks, and Bank are consistent with approval. In its evaluation of Applicant's managerial resources, the Board considered certain violations by Bank of the Currency and Foreign Transactions Reporting Act ("CFTRA") and the regulations thereunder. <sup>10</sup> Bank has taken remedial action as a

<sup>4.</sup> See, e.g., National City Corporation, 70 Federal Reserve Bulletin 743 (1984); NCNB Corporation, 70 Federal Reserve Bulletin 225 (1984); First Tennessee National Corporation, 69 Federal Reserve Bulletin 298 (1983).

<sup>5.</sup> Or. Rev. Stat. § 715.065(1).

State deposit data are as of June 30, 1986. Market and thrift data are as of June 30, 1985.

<sup>7.</sup> The Portland banking market is approximated by the Portland RMA, and consists of Multnomah County and parts of Clackamas, Columbia, Marion, Washington, and Yamhill Counties, all in Oregon; and part of Clark County, Washington.

<sup>8.</sup> Under the revised Department of Justice Merger Guidelines (49 Federal Register 26,823 (June 29, 1984)), a market in which the postmerger HHI is above 1800 is considered highly concentrated. In such markets, the Department is likely to challenge a merger that increases the HHI by more than 50 points. The Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indicating anticompetitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by at least 200 points. The Justice Department has stated that the higher than normal HHI thresholds for screening bank mergers for anticompetitive effects implicitly recognize the competitive effect of limited-purpose lenders and other non-depository financial entities.

<sup>9.</sup> If 50 percent of deposits held by thrift institutions in the Portland banking market were included in the calculation of market concentration, the share of total deposits held by the four largest organizations in the market would be 64.0 percent. Applicant would control 29.5 percent of the market's deposits and Company would control 0.6 percent of the market's deposits. The HHI would increase by 35 points to 1522.

<sup>10. 31</sup> U.S.C. § 5311 et seq.; 31 C.F.R. § 103.

result of the discovery of these violations. Applicant has committed to implement its compliance program at Bank within 30 days of consummation and to undertake a compliance review at Bank within 90 days of consummation to ensure Bank's compliance. Considerations relating to the convenience and needs of the communities to be served are also consistent with approval. Based on the foregoing and other facts of record, the Board has determined that consummation of the proposed transaction would be in the public interest and that the application should be approved.

On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of San Francisco pursuant to delegated authority.

By order of the Board of Governors, effective April 27, 1987.

Voting for this action: Chairman Volcker and Governors Seger, Angell, and Heller. Absent and not voting: Governor Johnson.

BARBARA R. LOWREY
[SEAL] Associate Secretary of the Board

Orders Issued Under Section 4 of the Bank Holding Company Act

Citicorp New York, New York

J.P. Morgan & Co. Incorporated New York, New York

Bankers Trust New York Corporation New York, New York

Order Approving Applications to Engage in Limited Underwriting and Dealing in Certain Securities

Citicorp, J.P. Morgan & Co. Incorporated, and Bankers Trust New York Corporation, New York, New York (collectively "Applicants"), bank holding companies within the meaning of the Bank Holding Company Act ("BHC Act"), have each applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.21(a) of the Board's Regulation Y, 12 C.F.R. § 225.21(a), to engage through wholly owned subsidiaries, Citicorp Securities, Inc. ("CSI"), J.P. Morgan Securities Inc. ("JPMS"), J.P. Morgan

Municipal Finance Inc. ("JPMMF"), and BT Securities Corporation ("BTSC"), respectively, in underwriting and dealing in, on a limited basis, certain securities that member banks may not underwrite and deal in, specifically:

- (1) municipal revenue bonds, including so-called "public ownership" industrial development bonds;
- (2) mortgage-related securities (obligations secured by or representing an interest in residential real estate);
- (3) consumer-receivable-related securities ("CRRs") (obligations secured by or representing an interest in loans or receivables of a type generally made to or due from consumers); and
- (4) commercial paper.2

These securities (hereinafter "ineligible securities") may be held by member banks for investment purposes under section 16 of the Banking Act of 1933 (the "Glass-Steagall Act") (12 U.S.C. § 24, Seventh), but may not under that section be underwritten or dealt in by member banks.

Applicants have previously received Board approval under section 4(c)(8) of the BHC Act for the abovementioned subsidiaries (collectively the "underwriting subsidiaries") to underwrite and deal in U.S. government and agency and state and municipal securities that state member banks are authorized to underwrite and deal in under section 16 of the Glass-Steagall Act (hereinafter "eligible securities").3 These eligible securities include certain municipal revenue bonds (issued for certain housing, university or dormitory purposes) as well as mortgage-related securities issued or sold by certain agencies of the federal government. The proposed new underwriting and dealing activities would be provided in addition to the previously approved activities, with the subsidiaries serving customers through offices in New York and, in the case of Citicorp, in several other cities in the United States.4

<sup>1.</sup> The industrial development bonds covered by the applications are only those tax exempt bonds in which the governmental issuer, or the governmental unit on behalf of which the bonds are issued, is the owner for federal income tax purposes of the financed facility (such as airports, mass commuting facilities, and water pollution control facilities).

<sup>2.</sup> J.P. Morgan has not proposed to underwrite and deal in CRRs. Citicorp's present application does not cover commercial paper, although it has filed a separate application with the Board to underwrite commercial paper.

<sup>3.</sup> These activities are authorized for bank holding companies under section 225.25(b)(16) of Regulation Y. 12 C.F.R. § 225.25(b)(16). In general, member banks may underwrite and deal in obligations of the United States, general obligations of states and political subdivisions, and certain securities issued or guaranteed by government agencies. 12 U.S.C.§§ 24 Seventh, and 335.

<sup>4.</sup> For purposes of the Order, in accordance with common industry usage, the term dealing refers to the business activity of holding oneself out to the public as being willing to buy and sell securities as principal in the secondary market.

474

Citicorp, with total consolidated assets of \$196 billion, is the largest banking organization in the nation.<sup>5</sup> It operates eight banking subsidiaries and engages directly and through subsidiaries in a broad range of permissible nonbanking activities. J.P. Morgan & Co. Incorporated, with total consolidated assets of \$76 billion, is the fourth largest banking organization in the nation. It operates two subsidiary banks and engages directly and through subsidiaries in a variety of permissible nonbanking activities. Bankers Trust New York Corporation, with total consolidated assets of \$56.4 billion, is the eighth largest banking organization in the nation. It also operates two subsidiary banks and engages directly and through subsidiaries in a variety of nonbanking activities.

Notice of the applications, affording interested persons an opportunity to submit comments on the proposals, has been published (50 Federal Register 20,847 and 41,025 (1985) and 51 Federal Register 16,590 (1986)). In addition, on December 31, 1986, the Board announced that it would hold a public hearing on February 3, 1987, on the applications, and requested specific comment on certain major issues, including a framework of prudential limitations to address the potential for conflicts of interest, unsound banking practices and other adverse effects raised by the proposals.

Four commenters, including the Securities Industry Association ("SIA"), a trade association of the investment banking industry, and the Investment Company Institute ("ICI"), a trade association of the mutual fund industry, opposed one or more of the proposals (collectively the "protestants"). The majority of the written comments were from banking organizations and trade associations representing segments of the banking industry and were in favor of the proposals. The Antitrust Division of the U.S. Department of Justice and the U.S. Treasury Department also supported approval of the proposals.

Because each of the underwriting subsidiaries that propose to underwrite and deal in the ineligible securities would be affiliated through common ownership with a member bank, the Board must determine whether, upon consummation, the subsidiaries would be "engaged principally" in underwriting or the public sale of securities within the meaning of section 20 of the Glass-Steagall Act. If so, the Board may not

In two previous decisions, the Board considered some of the issues that are raised in the applications now before the Board. On December 24, 1986, the Board approved the application of Bankers Trust New York Corporation ("Bankers Trust") to engage in the placement of commercial paper issued by third parties as one activity of a commercial lending affiliate.8 In that decision, the Board concluded that the placement activity involved did not constitute underwriting, distributing, or the public sale of securities for purposes of section 20. The Board further concluded that, even assuming this activity is covered by section 20, the term "engaged principally" in section 20 of the Glass-Steagall Act would allow the activity in an affiliate of a member bank if it is relatively insubstantial in terms of the total activity of the affiliate and the size of the market. Specifically, the Board cited the fact that since the gross revenues generated by the commercial paper activities of the affiliate would be no more than 5 percent of the affiliate's total gross revenues and that the affiliate's share of the total market for dealer placed commercial paper would not exceed 5 percent, the proposal would not violate section 20. In addition, the Board established a number of conditions to assure that the conduct of the activity was consistent with safe and sound banking practices and avoided conflicts of interest, concentration of resources, and other adverse effects. The Board applied this same framework of analysis in approving, on March 18, 1987, an application by The Chase Manhattan Corporation ("Chase") to engage in underwriting and dealing in commercial paper in a commercial finance subsidiary

approve the applications. In addition, the Board must determine whether the proposed activities are so closely related to banking as to be a proper incident thereto within the meaning of section 4(c)(8) of the BHC Act (12 U.S.C. § 1843(c)(8)) and are, on this basis, activities in which bank holding companies may engage.

<sup>5.</sup> All asset data are as of December 31, 1986.

<sup>6.</sup> Section 20 of the Glass-Steagall Act (12 U.S.C. § 377) provides that:

<sup>&</sup>quot;... no member bank shall be affiliated ... with any corporation ... engaged principally in the issue, flotation, underwriting, public sale, or distribution at wholesale or retail or through syndicate participation of stocks, bonds, debentures, notes, or other securities ...."

Because Applicants propose that certain of their officers and directors will also be officers and directors of the underwriting subsidiaries, the proposal raises an issue under section 32 of the Glass-Steagall Act (12 U.S.C.§ (78) which provides that:

No officer, director, or employee of any corporation . . primarily engaged in the issue, flotation, underwriting, public sale, or distribution, at wholesale or retail, or through syndicate participation, of stocks, bonds, or other similar securities shall serve [at] the same time as an officer, director, or employee of any member bank except in limited classes of cases in which the Board of Governors of the Federal Reserve System may allow such service by general regulations when in the judgment of the said Board it would not unduly influence the investment policies of such member bank or the advice it gives its customers regarding investments.

<sup>7.</sup> See Securities Industry Association v. Board of Governors of the Federal Reserve System, 468 U.S. 207, 216 (1984) (hereinafter "Schwah")

<sup>8. 73</sup> Federal Reserve Bulletin 138 (1987).

of the parent bank holding company. The Board has been guided by these two decisions in deciding the applications now before the Board.

An index to this decision is contained in Appendix A to this Order.

### Part I. Introduction & Summary of Findings

These applications raise fundamental questions concerning the scope of the Glass-Steagall Act's restrictions on the securities activities of member bank affiliates. Their resolution requires application of a statute adopted over 50 years ago in very different circumstances to a financial services marketplace that technology and other competitive forces have altered in a manner and to an extent never envisioned by the enacting Congress. Applicants' member bank affiliates seek to activate until now dormant provisions in section 20 of the Glass-Steagall Act to participate in underwriting and dealing in certain securities, so long as they are not engaged principally in this activity.

In its evaluation of the issues raised by the applications, the Board has been guided, as it must, by the terms of the statute and the underlying Congressional intent and purposes of the Act as evident in its structure and legislative history. Thus, the Board fully recognizes that Congress, through the Glass-Steagall Act, intended to separate commercial banks from general securities underwriting firms. Both the Board and the federal courts have often articulated the potential dangers to commercial banks from general underwriting activities that motivated the Congress in enacting the Glass-Steagall Act. The Board remains fully sensitive to these concerns.

Nevertheless, despite these dangers, the Congress drew a clear distinction between member banks and their affiliates in the Glass-Steagall Act. Except for certain specifically enumerated securities, including government securities, member banks were prohibited under the Glass-Steagall Act from engaging in any underwriting whatsoever. Member bank affiliates, on the other hand, were given a different statutory treatment under section 20 of the Act.

Member bank affiliates are permitted to participate in otherwise impermissible securities underwriting so long as they are not "engaged principally" in this activity. While prior to this time, there apparently has been no incentive to test the meaning of this authorization, the Board is now asked to apply it to specific proposals to engage in certain underwriting activities. Thus, the Board's task is to apply this explicit Congressional authorization to the proposed activities, but

in a manner that gives effect to the Congressional intent in adopting the Glass-Steagall Act. Because of the precedent-setting nature of these applications, the Board has given them careful attention, extending over a period in excess of a year, during which time the statutory language, the legislative history, and the implications of these proposals for banking organizations and the financial markets generally have been carefully analyzed by the Board on a number of occasions. In addition, the Board conducted a hearing before the Board members on these important issues.

For the reasons set out in its decisions in the Bankers Trust and Chase cases, the Board believes it is bound by the statutory language of section 20 to conclude that a member bank affiliate may underwrite and deal in the ineligible securities proposed in the applications, provided that this line of business does not constitute a principal or substantial activity for the affiliate. The Board reaffirms its conclusion in those cases that Congress intended that the "engaged principally" standard permit a level of otherwise impermissible underwriting activity in an affiliate that would not be quantitatively so substantial as to present a danger to affiliated banks. The Board believes that it is only on this basis-that the activity would be insubstantial-that Congress concluded that, despite the hazards from underwriting that caused it to ban banks from engaging in underwriting, this activity would be permissible for the affiliates of member banks.

The Board devoted a considerable effort to evaluation of the factors that should be used to determine the level of ineligible underwriting and dealing activity that would not exceed the substantiality threshold. Taking into account its precedent in the administration of the Glass-Steagall Act and the comments at the hearing on this issue, the Board again concluded that the principal factors that should be included in this judgment are gross revenue and market share. As explained in detail below, the Board believes that these factors are not susceptible to manipulation to increase artificially levels of activity and fairly reflect the amount of involvement of a bank affiliate in securities underwriting.

With respect to the appropriate quantitative level of ineligible activity permitted under section 20, the Board concludes that a member bank affiliate would not be substantially engaged in underwriting or dealing in ineligible securities if its gross revenue from that activity does not exceed a range of between five to ten percent of its total gross revenues. The Board also believes that a similar range should apply to the market share test it believes is appropriate under section 20. This range was established by reference to the Board's interpretations of the "primarily engaged" standard in section 32 of the Glass-Steagall Act. As

<sup>9.</sup> The Chase Manhattan Corporation, 73 FEDERAL RESERVE BUL-LETIN 367 (Order dated March 18, 1987).

discussed below, under these interpretations, a company would not generally be considered engaged substantially in ineligible securities activity if its gross revenues from that activity did not exceed 5 percent of its total gross revenues. Where underwriting volume was not large in absolute terms, however, somewhat higher levels of revenue were permitted, but generally not greater than 10 percent of total gross revenues.

Applying this framework to the current applications, the Board came to the conclusion that, in view of the fact that the volume of ineligible securities activity projected by Applicants would be very large in absolute terms, the lower end of the permissible range, 5 percent, should determine whether Applicants' gross income or market share from ineligible activity would be substantial. The Board recognizes that this 5 percent threshold for measuring the concept of "engaged principally" is a conservative interpretation of the level of activity permitted by section 20. The Board believes that a conservative, step by step approach is merited in applying the provision of a statute that was intended to deal with a crisis in our banking system and that has not been extensively interpreted by the courts as applied to the applications now before the Board. In the light of experience, the Board will consider, not later than one year from the date of this Order, whether, under the framework established by the Board in this Order, somewhat higher levels of activity would be consistent with the Board's finding that underwriting and dealing in ineligible securities in an affiliate of a member bank is permissible so long as the level of this activity measured by gross revenue and market share is not substantial.

In addition, the three applications now before the Board raise an important issue that was not present in the Bankers Trust and Chase applications. In those two cases, the applicants proposed to place or underwrite commercial paper in a subsidiary that was not engaged in securities underwriting activities at all. Here, the three Applicants propose to underwrite and deal in securities in a subsidiary that is otherwise engaged in underwriting and dealing in government securities and other securities that banks may underwrite and deal in pursuant to section 16 of the Glass—Steagall Act.

Thus, in the three pending applications the Board must consider whether underwriting U.S. government securities and other securities that a bank may underwrite pursuant to section 16 of the Glass-Steagall Act should be considered a permissible activity for the purposes of applying section 20 of the Glass-Steagall Act to the proposed underwriting subsidiaries. If underwriting these securities, and particularly U.S. government securities, is considered permissible under section 20, as it is under section 16, an affiliate engaged

principally in these activities could be then less than principally engaged in underwriting the otherwise impermissible securities proposed in the applications, including commercial paper, mortgage-backed securities and municipal revenue bonds. The answer to this question has vital significance for bank holding companies seeking to underwrite and deal in ineligible securities. Because of the operation of the net capital rules established by the Securities and Exchange Commission for broker-dealers, as a practical matter it is not feasible for bank affiliates to underwrite and deal in ineligible securities, other than commercial paper, within the confines of section 20 unless the subsidiary in which this activity takes place is engaged principally in underwriting and dealing in eligible securitiesessentially U.S. government securities.

The question as to whether underwriting and dealing in government securities is included within the prohibition of section 20 of the Glass-Steagall Act depends upon an analysis of the language of the statute, the intention of Congress and the Board's own practice in administering the Act. The Board decided, in December 1986, not to resolve this question until after a hearing had given the parties an opportunity to develop further the record on this matter.

In the light of these considerations, the Board has concluded that U.S. government and other securities specifically made eligible for underwriting and dealing by member banks in section 16 should not be viewed as the kind of activity proscribed by section 20. The Board took into account, first, the fact that the Board has previously decided that a member bank affiliate is not engaged principally in impermissible activities if its sole business is underwriting and dealing in U.S. government and other eligible securities. <sup>10</sup> Second, the Board considered that Congress did not intend to apply a more restrictive underwriting standard to member bank affiliates than it legislated for member banks themselves.

The Board's conclusion with respect to the content and meaning of the authorization of section 20 to member bank affiliates to be less than engaged principally in otherwise impermissible underwriting activities is all the more compelling because the Board has reached the conclusion that the activities proposed in these applications can be conducted by bank affiliates on a safe and sound basis and without undue risk to affiliated banks. On the contrary, the evidence seems to indicate that without this authority banking organizations will be at a disadvantage in the competition to supply the credit needs of the most creditworthy borrowers with access to the less costly commercial

<sup>10.</sup> See 12 C.F.R. § 225.25(b)(16).

paper market, with a consequent continuing decline in the overall quality of bank loan portfolios.

The Board has also evaluated whether the activities proposed in the applications are closely related to banking and a proper incident thereto under section 4(c)(8) of the BHC Act. 12 U.S.C. § 1843(c)(8). As stated in detail below, the Board has concluded that, because of the considerable experience of banks in underwriting and dealing in eligible securities, which are closely analogous to the proposed ineligible securities activities, and because the proposed commercial paper activities are functionally equivalent to traditional commercial banking functions, banking organizations are fully familiar with the proposed activities and have the expertise and capability to carry out the proposed functions. The Board also concluded that the proposed de novo participation in this activity would have the beneficial effect of substantially increasing competition, particularly in the highly concentrated commercial paper market, with the substantial expected public benefits of lowering financing costs as well as providing greater convenience to customers and increased efficiency in the proposed services.

As noted above, Congress recognized that a member bank affiliate that is not engaged principally in underwriting activities covered by section 20 could engage in otherwise impermissible securities underwriting even though it was aware that this activity could give rise to subtle hazards that could impair public confidence in depository institutions. The Board believes Congress was prepared to accept these risks because they could be contained within fully acceptable limits through maintaining the corporate separateness of the underwriting firm and the affiliated bank and through limitations on the relative size of the otherwise impermissible activities to assure their insubstantiality. These prudential limits have been fully implemented in the Board's interpretation of the Glass-Steagall Act.

In addition, other safeguards, both as a practical matter and under other statutory authorities, will be in place. As a practical matter, the securities which the Applicants propose to underwrite and the Board is prepared to authorize are securities that member banks are eligible to purchase for their own account, are of high quality and involve minimum risk. In terms of the statutory framework, the Board notes that bank holding company affiliates that engage in securities underwriting would be subject to SEC jurisdiction under the securities laws. Moreover, although not required by the Glass-Steagall Act, the Board believes it is appropriate to require that member bank affiliates underwriting otherwise impermissible securities observe a number of prudential considerations to assure capital adequacy and to limit both transactions and the flow of information between an underwriting subsidiary and other affiliates of the parent banking organization. These prudential considerations are explained in Part III below.

Accordingly, the Board has concluded that, subject to the limitations established in this Order, approval of each of the three applications would not result in a violation of the Glass-Steagall Act and would be consistent with the closely related and proper incident to banking standards of section 4(c)(8) of the Bank Holding Company Act.

# Part II. Glass-Steagall Act

# A. Applicants' Contentions

The Applicants contend that the underwriting subsidiaries would not be "engaged principally" in underwriting securities within the meaning of section 20 of the Glass-Steagall Act because the subsidiaries will limit the volume of their ineligible activity to a small percentage of their total business and so that the subsidiaries would not have a significant share of the market for any of the ineligible securities underwritten or dealt in.<sup>11</sup>

The Applicants contend that the term "engaged principally" in section 20 means the chief or single largest activity, and that, therefore, their underwriting subsidiaries may underwrite and deal in ineligible securities so long as this ineligible activity does not constitute more than 50 percent of the subsidiaries'

<sup>11.</sup> Citicorp proposes (in the third year and thereafter) to limit the total sales volume of underwriting by CSI in ineligible municipal revenue bonds, mortgage-related securities and CRRs to no more than 10 percent of all securities (both eligible and ineligible) underwritten by the affiliate during the previous year. Citicorp would similarly limit the affiliate's dealing in ineligible securities to 10 percent of its total securities dealing activity. Citicorp would also restrict the affiliate's underwriting of each type of security to no more than 3 percent of the total amount of each type of ineligible security underwritten domestically during the previous calendar year by all firms (mortgage-related securities and CRRs constitute a single category for this purpose). It would also limit the amount of each type of securities it may hold for dealing so as not to exceed this market cap.

Morgan proposes to limit ineligible underwriting and dealing activity by its affiliates (JPMS and JPMMF) in municipal revenue bonds, mortgage-related securities and commercial paper so that the activity will not, over any two year-period, account for more than 15 percent of the total consolidated eligible and ineligible securities activity of the affiliates as measured by two of the following three criteria: gross income, sales volume and average assets acquired in connection with the activity. Morgan would adopt the same market limitations as Citicorp, except that it proposes a 10 percent market share limitation for commercial paper based upon the average amount of dealer-placed commercial paper outstanding during the previous four calendar quarters.

Bankers Trust proposes to conduct, through its affiliate BTSC, ineligible underwriting and dealing activity involving municipal revenue bonds, commercial paper, and mortgage- and-consumer-receivable-related securities under the same tests as proposed by Morgan.

478

total business activity or represent its single largest business activity. On this basis and subject to the proposed limitations on each subsidiary's ineligible securities underwriting and dealing activity, Applicants contend their underwriting subsidiaries would be "engaged principally" in underwriting and dealing in eligible securities, which is permissible under section 20, and, therefore, the subsidiaries could not by definition be engaged principally in underwriting ineligible securities in violation of section 20 of the Glass—Steagall Act. Applicants further claim that, even under the broadest reading of "principally" as denoting any substantial activity, their subsidiaries would not be engaged principally in ineligible securities activity under the limitations proposed in their applications.

Applicants also argue that the proposed dealing activities are not covered by section 20 of the Glass-Steagall Act, which they claim is limited to activities involving the initial distribution of securities. They base this claim on the fact that section 20 does not refer to "dealing" per se, but to the functions of issuance, flotation, underwriting, public sale, or distribution of securities.

#### B. Protestants' Comments

The protestants claim that Applicants' view of the term "principally" would vitiate the central purpose of the Glass-Steagall Act by allowing member banks to reestablish "security affiliates" that could rival the largest investment banking firms. For this reason, the protestants contend that the term "principally" must be interpreted consistent with Congressional intent to denote any substantial, significant, regular or non-incidental activity, whether or not it is the largest activity of the affiliate.

ICI further contends that the "engaged principally" standard of section 20 also would cover any company "formed for the purpose of" underwriting securities of any sort, the description of a securities company that was contained in the now repealed section 19(e) of the Glass-Steagall Act.<sup>13</sup> ICI contends that each of the underwriting subsidiaries was formed for the purpose of underwriting securities and thus, in its view, would

The protestants also contend that the terms "stocks, bonds, debentures, notes, or other securities" in section 20 include all securities, both eligible and ineligible. Thus, they argue that, even under Applicants' interpretation of "engaged principally," the proposals to conduct ineligible securities activity in a government securities underwriting subsidiary would violate section 20 because the subsidiary's largest activity would be underwriting and dealing in "securities," albeit the preponderance of these securities would be bank-eligible U.S. government, state, and municipal securities.

Applicants counter that the term "securities" in section 20 does not include government securities and other securities member banks are authorized to underwrite and deal in under section 16, on the theory that a member bank affiliate may engage in any activity authorized for the member bank under the Glass-Steagall Act.

## C. Analysis of Glass-Steagall Act Issues

1. Securities that a Member Bank May Underwrite are not Covered by the Prohibition of Section 20.

Protestants contend that the term securities in section 20 encompasses all securities—both ineligible as well as bank eligible securities—and that, therefore, the proposed subsidiaries would be "engaged principally" in underwriting securities for purposes of section 20 even under Applicants' view of the term "principally."

The Board notes that, on its face, section 20 draws no distinction between eligible and ineligible securities, as is the case under other sections of the Glass-Steagall Act. The section simply contains a prohibition on a member bank's affiliation with any corporation engaged principally in underwriting "stocks, bonds, debentures, notes, or other securities."

Looking at the statute as a whole, however, the Board believes that Congress did not intend to include the eligible securities activity authorized for member banks under section 16 of the Glass-Steagall Act within the scope of section 20's prohibition against an affiliate's being engaged principally in the underwriting

be "engaged principally" in underwriting securities under section 20.

<sup>12.</sup> The Applicants rely on a dictionary definition of the term "principally" to mean the single largest activity and statements in the U.S. Supreme Court decision in *Board of Governors of the Federal Reserve System v. Agnew*, 329 U.S. 441, 446, 448 (1947), concerning section 32 of the Glass-Steagall Act, which they argue indicate that "principally" as used in section 20 means more than 50 percent of the company's business.

<sup>13.</sup> Banking Act of 1933, Pub. L. No. 66, § 19(e), 48 Stat. 162, 188 (codified at 12 U.S.C. § 61(e) (1964)), repealed by Act to Amend the Bank Holding Company Act of 1956, Pub. L. No. 89–485, § 13(c), 80 Stat. 236 (1966).

Section 19(e) prohibited a holding company affiliate, which was defined to include a bank holding company, from voting the shares of its subsidiary member bank if the holding company affiliate controlled, or participated in the management or direction of, any business organization "formed for the purpose of, or engaged principally in, the issue, flotation, underwriting, public sale, or distribution . . . of stocks, bonds, debentures, notes, or other securities of any sort."

or public sale of "stocks, bonds, debentures, notes, or other securities." In the Board's view, the structure and Congressional intent of the Glass-Steagall Act make clear that in light of the express authorization in section 16 for member banks to underwrite eligible securities, the limitation of section 20 against a member bank affiliate being engaged principally in underwriting securities does not encompass bank eligible securities. In this regard, the Supreme Court has stated that the structure of the Glass-Steagall Act reveals a Congressional intent to impose a "less stringent standard" on member bank affiliates under section 20 than is applied to the direct activities of member banks under section 16 of the Act14 and that under the Glass-Steagall Act "a bank affiliate may engage in activities that would be impermissible for the bank itself."15

As section 16 expressly provides, and as was clear prior to its enactment, banks have the power to underwrite and deal in government obligations. 16 Given that section 20 establishes a less rigorous standard for member bank affiliates than is applicable to a member bank, it follows, a fortiori, that such bank eligible underwriting and dealing activity is permitted for a member bank affiliate. In reaching this conclusion, the Board has applied a fundamental principle of statutory construction that the various provisions of a statute should be construed as a whole and that a particular section of a statute may not be interpreted in isolation without regard to other sections of the statute of which it is a part.17

In accordance with this interpretation, the Board has for some time authorized bank holding companies, including those that controlled member banks, to establish subsidiaries to underwrite and deal in securities that are expressly authorized for member banks to underwrite and deal in under section 16,18 and in 1984 authorized such activity for bank holding companies

generally by regulation.19 The Board's decision in

these cases was premised upon its view that the conduct of such bank eligible securities activities by member bank affiliates is not the type of activity prohibited by section 20 or 32 of the Glass-Steagall Act.

The interpretation of section 20 urged by protestants that a member bank affiliate may not underwrite securities that are expressly authorized for a member bank itself not only runs counter to the Supreme Court's statements regarding the scope of section 20, but is also inconsistent with the fundamental purpose of the Glass-Steagall Act. The Glass-Steagall Act was enacted with one central purpose in mind, to protect bank depositors from the hazards that Congress viewed as attributable to the combination of commercial and investment banking. However, Congress did not view the traditional underwriting activities of banks in government securities as giving rise to these dangers to the bank and its depositors and on this basis permitted the continuation of that activity within the bank itself.20

Section 20 was designed to limit the scope of activities of member bank affiliates as a complement to the restrictions on banks' direct underwriting and dealing activities,<sup>21</sup> and as a means of enforcing the separation of commercial from investment banking.<sup>22</sup> Clearly, therefore, section 20 was not designed to prohibit affiliates from engaging in activity a bank could lawfully conduct.<sup>23</sup> Moreover, there is some evidence in the legislative history of the Glass-Steagall Act that section 20 was not meant to prohibit the underwriting of government securities. 76 Cong. Rec. 2000, 2274 (1933) (remarks of Sen. Long); 76 Cong. Rec. 1941 (1933) (remarks of Sen. Glass).

To read the statute otherwise would mean that Congress intended to impose a substantially stricter standard on an affiliate than on the member bank itself, an interpretation that would be out of harmony with the central purpose of the Act to protect the bank and its depositors. Moreover, with respect to the analogous question raised in ICI II, as to whether an activity could be prohibited under section 21 that was authorized under section 16, the Supreme Court stated that section 21 "surely was not intended to require banks to abandon an accepted banking practice that was

<sup>22.</sup> See ICI II, 450 U.S. at 61-62.

<sup>23.</sup> Id.

subjected to regulation under section 16." 450 U.S. at 63. In affirming the Board's decision authorizing bank holding companies to act as discount brokers, the Court also noted that the fact that section 16 authorizes the activity for member banks suggested that it was not the type of activity at which the Glass-Steagall Act was aimed.<sup>24</sup>

Similarly, the United States Court of Appeals for the D.C. Circuit has recently stated that "those activities of commercial banks that section 16 places on the acceptable commercial banking side of the line [between commercial and investment banking] cannot be placed by section 21 on the impermissible investment banking side of the line." Accordingly, the court concluded that section 21 of the Glass-Steagall Act would not prohibit a bank from selling securities to the extent authorized for member banks under section 16, even before the amendment to section 21 in 1935 excepting from section 21's prohibition activities authorized for member banks under section 16.

The court reached this conclusion on two separate and independent grounds, both of which, in the Board's view, support the conclusion that section 20 does not cover activity authorized under section 16. First, the court noted, as Applicants point out, that the 1935 Amendment to section 21 was termed a clarifying amendment "to make it clear that [section 21] does not prohibit any financial institution or private banker from engaging in the securities business to the limited extent permitted to national banks under [section 16]."26 This the court felt necessarily implied that the authorization under section 16 also applied to the prohibition of section 21 against selling and underwriting securities generally, even before the 1935 amendment. Second, the court noted that, unless the authorization of section 16 was read as an exception to section 21, a member bank would be prohibited by section 21 from conducting activities the bank was expressly authorized to conduct under section 16, a result the court termed absurd. Id. at 1058.

The Board believes this reasoning is directly applicable to section 20, which by its terms covers the same types of securities and the same underwriting and selling activities described in section 21. Thus, in order to avoid the illogic of barring a member bank affiliate from activity expressly authorized for the member

\_\_\_\_\_

bank, the Board believes that section 20 must necessarily not cover securities activity authorized for member banks under section 16.27 Moreover, given the fact that Congress has legislated a less stringent standard for member bank affiliates than for banks and that Congress, as the court concludes, did not intend section 21 even before its amendment to bar member banks from activity authorized under section 16, it follows that Congress must necessarily have intended not to bar their affiliates from such activity.<sup>28</sup>

Finally, the Board notes that the limited expansion of the activities of Applicants' government securities subsidiaries, as proposed in the applications and limited by this Order, would not transform these subsidiaries, which would derive substantially all of their income from permissible eligible underwriting activities and would not engage in a full investment banking business, into the type of general securities underwriting affiliates Congress intended to divorce from member banks in 1933.

Since eligible securities cannot reasonably be viewed as securities for purposes of section 20, member bank affiliates that conduct such eligible securities underwriting activity cannot be viewed as engaged in the securities underwriting business proscribed by section 20 and thus may—as may any other member bank affiliate—engage in ineligible underwriting and dealing activity where such activity is not a principal

<sup>24.</sup> Schwab, 468 U.S. at 221.

<sup>25.</sup> Securities Industry Association v. Board of Governors of the Federal Reserve System, 807 F.2d 1052, 1058 (D.C. Cir. 1987), petition for cert. pending No. 86–1429 ("Bankers Trust II").

<sup>26.</sup> H. Rep. No. 742, 74th Cong., 1st Sess. 16 (1935). Relying on the legislative history, the court in *Bankers Trust II* said the 1935 amendment to section 21 was "simply to leave no doubt of the need to read the two sections [16 and 21] harmoniously . . . ." 807 F.2d at 1058.

<sup>27.</sup> The SIA claims that an interpretation of section 20 that prohibits a bank affiliate from underwriting and dealing in even eligible securities is not unreasonable because Congress may have intended the underwriting of government securities to be conducted directly by the bank—a federally regulated entity. Such an explanation is implausible, in the Board's view, because when Congress undertook to regulate broker-dealers generally shortly after passage of the Glass-Steagall Act, companies dealing only in government securities were expressly exempted from federal regulation. Thus, any company that underwrote only government securities would not have been subject to federal regulation.

<sup>28.</sup> Protestants contend that the failure of Congress to amend section 20 in 1935 to permit member bank affiliates to underwrite securities authorized under section 16 demonstrates member bank affiliates were not intended to be permitted to conduct such activity. The Board, however, believes that the better view is that articulated in Bankers Trust II that the 1935 amendment merely clarified the preexisting state of affairs and that, just as banks were not prohibited by section 21 from engaging in activity permitted under section 16 even before the amendment, member bank affiliates must necessarily not have been prohibited from engaging in such activity under section 20. Thus, Congress' failure to amend section 20 in 1935 does not mean that Congress intended to bar member bank affiliates from activity permitted for member banks. Moreover, it was necessary to clarify section 21 because it is a criminal statute and the Attorney General had expressed the view with respect to certain aspects of section 21 that clarification would be desirable. Banking Act of 1935: Hearings on S.1715 and H.R. 7617 Before a Subcomm. of the Senate Comm. on Banking and Currency, 74th Cong., 1st Sess. 139-140 (1935) (Testimony of J.F.T. O'Connor). Section 20, however, is not a criminal statute and in light of the Board's ability to issue interpretations of that statute, there was no pressing need for clarification, as was the case with section 21.

line of business for the affiliate. In the Board's view, there is no basis in the terms or legislative intent of section 20 to prohibit an eligible securities underwriting subsidiary from underwriting and dealing in any ineligible securities activity while allowing a subsidiary engaged in commercial finance, mortgage banking, securities brokerage or other nonbanking activity permissible for bank holding companies to engage to some extent in ineligible securities activities.

In this regard, the Board has considered the proposed limited expansion of Applicants' government securities subsidiaries' activities in light of the hazards to the bank and its customers that the Glass-Steagall Act is intended to prevent. As noted, Congress clearly did not view the underwriting of bank-eligible securities as harmful to the bank or its depositors and Congress plainly permitted ineligible underwriting activity so long as it did not amount to a principal activity. Moreover, as noted, the Board's order in this case goes further than Congress under the Glass-Steagall Act and establishes limitations on the conduct of the activity under the Bank Holding Company Act to assure that the activity will not produce significant conflicts of interest, unsound banking practices, unfair or decreased competition, undue concentration of resources or other adverse effects.29

For the above reasons, the Board believes that the term "securities" in section 20 must be read as not including those securities that member banks are expressly authorized to underwrite and deal in under section 16.

2. Dealing Constitutes the Underwriting or Public Sale of Securities Under Section 20.

Applicants maintain that "dealing" is not an activity covered by the terms "issue, flotation, underwriting, public sale, or distribution" in section 20, particularly

if dealing is limited only to secondary market sales and does not involve an initial distribution of securities. For the reasons set out below and more fully in the attached Appendix B, the Board concludes that the securities activity covered by section 20 is not limited to the initial distribution of securities, but also includes the activity of holding oneself out to the public as being willing to buy and sell securities as a principal in the secondary market, or "dealing" as that term is used by the Applicants. This conclusion is consistent with the literal meaning of the term "public sale" in section 20, the legislative history of the section, judicial interpretation, the purposes of the Act, and the Board's longstanding practice.

Literally, the term "public sale" in section 20 is broad enough to encompass dealing in securities. A dealer commonly refers to a person who holds himself out to the public as being willing to buy and sell securities for its own account. 2 L. Loss, Securities Regulation 1215, 1297 (2d ed. 1961). Moreover, the legislative history of the Glass-Steagall Act indicates that Congress intended to cover not only underwriting activity but also stock speculation, market making and participation in trading pools—activities attributable to dealing and not generally associated with initial distribution activities.<sup>30</sup>

On this basis, the Board for many years has consistently ruled that dealing is covered by section 32 of the Act, which, as noted, is identical to section 20 in terms of its coverage of issuance, flotation, underwriting, public sale, or distribution activities.<sup>31</sup>

The conclusion that dealing constitutes the "public sale" of securities under section 20 is also supported by the Supreme Court's observation in *Schwab*, 468 U.S. at 217–18, that the activities described in section 20 refer, at a minimum, to operations in which the affiliate acts as a principal.

 The Term "Engaged Principally" in Section 20 Denotes any Substantial Activity.

In its Bankers Trust decision, the Board concluded that, even if the placement as agent of commercial

<sup>29.</sup> In its evaluation of this case, the Board has carefully considered the fact that Applicants' underwriting subsidiaries were formed in major part through the transfer to the subsidiaries of government securities activities previously conducted as departments or divisions of the Applicants' member bank subsidiaries. As indicated, the Board has previously approved the transfer of such activities to the holding companies' underwriting subsidiaries as a permissible nonbanking activity under the BHC Act. Accordingly, the Applicants are engaged in this activity pursuant to law and regulatory authorization. While the transfer of these functions could result in the deliberate creation of a large base of eligible activity, the size of the ineligible activity that may be conducted by these affiliates is sharply limited by the 'engaged principally" provisions of the Glass-Steagall Act as interpreted by the Board. As discussed below, these provisions involve the concept of a quantitative limitation on underwriting activity which is embodied in the income and market share criteria for establishing "substantiality" contained in this Order. The Board wishes to stress that the latter criterion, in particular, creates a limitation on underwriting activity which is independent of the size of the affiliate that might be established by purposeful transfer of activities from the bank to the underwriting affiliate.

<sup>30.</sup> See S. Rep. No. 77, 73d Cong., 1st Sess. 10 (1933). See also Operation of the National and Federal Reserve Banking Systems, 1931: Hearings on S. Res. 71 Before a Subcomm. of the Senate Comm. on Banking and Currency, 71st Cong., 3d Sess. 198–199, 306–309, 1063–1064. The conclusion that section 20 covers dealing is also more consistent with the purposes of the Glass-Steagall Act to address the Congress' concern over the "subtle hazards" of a bank having a pecuniary interest in the purchase and sale of particular securities. ICI I, 401 U.S. at 629–34; Securities Industry Association v. Board of Governors of the Federal Reserve System, 468 U.S. 137, 145 (1984) ("Bankers Trust I"); Schwab, 468 U.S. at 220.

482

paper were deemed to constitute an activity covered by section 20 of the Glass-Steagall Act, Bankers Trust's commercial lending affiliate would not be "engaged principally" in underwriting or dealing in securities within the meaning of section 20 under the 5 percent income and market share limits at issue in that case. The Board held that the term "engaged principally" in section 20 denotes any activity of the underwriting affiliate that is substantial, even if the activity does not represent more than 50 percent of the affiliate's total business activity or its single largest or most important activity. A similar decision was made in the *Chase* case.

After considering the submissions by the parties and other interested persons at the hearing and in post-hearing materials, the Board continues to be of the view, for the reasons expressed in full in *Bankers Trust*, that the term "engaged principally" in section 20 denotes any substantial activity of the affiliate.

In this regard, the Board has considered the argument by ICI regarding the now repealed section 19(e) of the Glass-Steagall Act. While section 19(e) and section 20 were designed to accomplish the same general objective and overlap to some extent in the case of a securities company affiliated with a member bank within a bank holding company system, section 20 does not contain the "formed for the purpose of" language found in section 19(e).

Moreover, nothing in the legislative history of the Glass-Steagall Act or the 1966 legislation which repealed section 19(e) indicates that the "engaged principally" standard of section 20 incorporated the "formed for the purpose of" standard. Section 19(e) was repealed, at the recommendation of the Board, because it was "doubtful" whether section 19(e) was "sufficiently useful" to justify its retention in light of the enactment of the Bank Holding Company Act.<sup>32</sup>

The Board has also considered the Supreme Court's discussion of section 19(e) in *ICI II*, 450 U.S. at 70 n.43. In the Board's view, the Court's statements merely reflect the view that if a company is formed in order to underwrite securities, one would expect the company to be "engaged principally" in that activity. The Court was not presented with a situation, such as that presented here, in which the company's largest activity is permissible government securities underwriting activities and its ineligible activities are insubstantial. In this regard, the Board is unaware of any

instance of a member bank affiliated in a bank holding company system with a securities company that was covered by the "formed for the purpose of" language of section 19(e), but not by "engaged principally" language.

Finally, the Board notes that the "formed for the purpose of" language—like the "engaged principally" terminology in section 20—is susceptible to different meanings. For example, the "formed for the purpose of" language could be construed to refer to the situation where the company was specifically formed to underwrite ineligible securities and would not cover the situation where the company was formed for the purpose of commercial finance (as in the Bankers Trust and Chase cases previously approved by the Board) or to underwrite bank-eligible securities as in these cases.

Nevertheless, while the Board does not believe the "formed for the purpose of" standard has been incorporated in the "engaged principally" standard of section 20, the Board does note that section 19(e), because of its overlap with and close relationship to section 20, does tend to confirm the Board's conclusion that the "engaged principally" standard of section 20 must be read to cover any substantial ineligible activity of the affiliate in order to carry out Congressional intent to separate member banks from securities affiliates.

The Board has also considered Applicants' contention, reiterated at the hearing and in post-hearing materials, that the Board is required by the Supreme Court's Agnew decision to determine that the "engaged principally" standard of section 20 denotes only that activity of the affiliate that constitutes more than 50 percent of its total business activity or its single largest activity. The Board has carefully considered Applicants' position, but remains of the view that the Supreme Court in the Agnew case did not determine dispositively the meaning of "engaged principally" in section 20. As the Board noted in its Bankers Trust Order, section 20 was not at issue in Agnew because of the absence of a stockholder affiliation between the member bank and the securities company involved. 73 Federal Reserve Bulletin 143, 144 (1987). Nor was any such determination necessary to the Court's decision regarding the term "primarily engaged" in section 32, since even if the Court determined that the two standards were identical, it would not have been precluded from reaching the same conclusion—that "primarily" meant any substantial activity, given that "principally" can also mean any substantial activity. As was explained in the Bankers Trust Order, at the time the Glass-Steagall Act was passed, an accepted dictionary definition of principally included "important'' and "primarily."

<sup>32.</sup> S. Rep. No. 1179, 89th Cong., 2d Sess. 12 (1966); Bank Holding Company Act, Report of the Board of Governors of the Federal Reserve System to the Comm. on Banking and Currency, U.S. Senate, 85th Cong., 2d Sess. 26 (Comm. Print 1958).

As noted in *Bankers Trust*, the Board believes its conclusion regarding the meaning of section 20 is particularly appropriate in light of the fact that to hold otherwise would mean that section 20 would apply to no one, since investment banking firms typically engage in numerous other activities in addition to securities underwriting and dealing. This rationale led the Court in *Agnew* to affirm the Board's interpretation that section 32 denoted any substantial activity. Indeed, such a view would permit member banks to establish the very affiliations with the nation's largest investment banking businesses that section 20 was precisely designed to prohibit.<sup>33</sup>

At the hearing, Applicants also disputed the Board's conclusion that common sense would suggest that Congress could not have intended to apply a less stringent standard where a member bank and an underwriter were affiliated through common stock ownership than was applied where a member bank and an unaffiliated underwriter merely shared a common director. In Bankers Trust, the Board pointed out that Applicants' view of principally would mean that a member bank could be affiliated through common stock ownership with a securities company substantially but not predominantly engaged in underwriting, but could not establish a single management interlock with the company, a seemingly anomalous result in light of the greater potential in common ownership situations for adverse effects of the type that led Congress to enact the Glass-Steagall Act. 34 Applicants contend that Congress in fact intended to apply a more lenient standard in common ownership situations because the securities affiliate of a member bank would be subject to examination and rules limiting transactions between the member bank and its affiliates.

At the outset, the Board notes that there is nothing in the legislative history to support Applicants' view. Moreover, the Supreme Court has stated that Congress in 1933 rejected the view that examination and regulation of bank securities affiliates would address

the concerns Congress perceived when commercial and investment banking functions are combined. Bankers Trust I, 468 U.S. at 147. Rather, Congress felt that most commercial and investment banking functions were "fundamentally incompatible." Id. The Board also notes that the examination authority and affiliate transaction restrictions contained in the Glass-Steagall Act were not comprehensive and did not foreclose the possibility of the type of adverse effects that concerned Congress and resulted in enactment of the Glass-Steagall Act. For example, section 23A of the Federal Reserve Act, 35 to which Applicants point, did not apply to purchases of assets by a member bank from an affiliate until 1982, thus allowing dumping of securities in a member bank or the purchase by a member bank of low quality assets from a securities affiliate, a hazard Congress was specifically concerned with in 1933.

## APPROPRIATE MEASURES OF "ENGAGED PRINCIPALLY"

Having determined that the "engaged principally" standard of section 20 denotes any substantial activity, the Board must determine whether, under the limitations proposed by the Applicants, their subsidiaries' ineligible underwriting and dealing activity would be substantial. In making this determination, the Board has been guided by the Congressional intent underlying section 20 of the Glass-Steagall Act to insulate member banks from the dangers Congress associated with the combination of commercial and investment banking by allowing member bank affiliates to underwrite and deal in ineligible securities only at a level that would not be substantial. Taking these factors into account in the Bankers Trust and Chase cases, the Board determined that where ineligible activity would not exceed 5 percent of the affiliate's gross revenues or 5 percent of the market for the type of security being placed or underwritten, the activity would not be substantial.

Applicants have suggested a number of differing methods for determining when an affiliate is "engaged principally" in underwriting activity, including limitations based on sales volume alone or on sales volume, assets devoted to the activity or income on a two out of three basis. The Board, however, continues to believe that the most appropriate measure of "engaged principally" is the gross revenue the affiliate derives from the ineligible underwriting and dealing activity

<sup>33.</sup> In order to support its strict interpretation of section 32, the Agnew Court observed that the Act distinguished between firms primarily engaged and engaged principally in underwriting. 329 U.S. at 448. In the Board's view, the Agnew Court reached its decision on the meaning of "primarily engaged" on the basis of the terms and legislative intent of the statute. 329 U.S at 447. Its subsequent references in the opinion to "principally" in section 20 were clearly meant to bolster its decision made on the basis of the terms and legislative intent of the statute. While the Court's observation is a part of the Court's reasoning, it is not a legally binding ruling on the scope of section 20. In addition, in the Board's view, the Court's supplemental argumentation should not be accorded controlling weight here, given that the Court in Agnew had no occasion to consider the fact that viewing "principally" to mean the chief or single largest activity would produce results that are inconsistent with what the Court understood to be the basic purpose of the legislation.

<sup>34. 73</sup> FEDERAL RESERVE BULLETIN at 143, 144.

<sup>35.</sup> Banking Act of 1933, Pub. L. No. 66, § 13, 48 Stat. 162, 183 (codified at 12 U.S.C. 371c (1976), amended by Garn-St Germain Depository Institutions Act of 1982, Pub. L. No. 97-320, § 410, 96 Stat. 1469, 1515.

484

relative to the revenue derived from its total business activities. This is consistent with the Board's practice under the "primarily engaged" standard of section 32 of the Glass-Steagall Act, which gives substantial weight to the size of the company's revenue from underwriting activity relative to its total revenue.<sup>36</sup> In addition, the Board believes it appropriate to consider the significance of the organization's presence in the market for the particular activity, also a factor considered by the Board in prior rulings under the Glass-Steagall Act.<sup>37</sup>

As noted in the Bankers Trust Order, the Board believes that gross revenue is the appropriate test to determine whether a subsidiary is "engaged principally" because it is an objective and meaningful measure of the importance of the activity to the subsidiary as a whole and also reflects the level of risk involved in the activity, a major consideration behind enactment of the Glass-Steagall Act. In addition, a gross revenue test goes some way toward avoiding the potential for manipulation present in a test based solely on sales volume. Although gross revenues may be influenced to enlarge ineligible operations, the sales volume of a government securities subsidiary could be easily inflated by daily "matched book" operations38 or be increased through churning of the affiliate's dealing activity in permissible securities in order to create a larger base against which ineligible activity would not appear to be substantial. The Board also notes that the average assets test suggested would not take into account ineligible underwriting activities which do not entail substantial or lengthy investment of the underwriting subsidiary's own funds.39

The Board has considered Applicants' comments at the hearing regarding the desirability of their proposed tests, including their view that the volume tests would not be subject to artificial increases because of increased costs and legal constraints. The Board, however, continues to be of the view that a revenue test is the best overall measure under section 20, posing the fewest operational difficulties and giving the most

accurate indication of the importance of the activity to the affiliate's total business operations. While Applicants argue there are a variety of different tests that could be applied to measure engaged principally status and that the tests should be tailored for each applicant, the Board believes that a uniform standard measure is desirable to assure a rule that would be simple to apply and enforce and to avoid unfairness in application among various applicants.

The Board also believes that in determining whether a company's underwriting activity is substantial it is important to consider in connection with gross revenue the affiliate's market share for the particular type of security underwritten. In the Board's judgment, the fact that an affiliate would be a major force in a particular securities market would be an evidentiary factor suggesting that the affiliate is "engaged principally" in underwriting securities. Thus, the Board has taken into account a firm's market share in decisions under the Glass-Steagall Act, particularly as it is related to the scope and extent of the firm's ineligible activity. 40

In addition, the Board believes that a market share test would provide a useful and objective proxy for sales volume, which the Board believes is an important factor to be taken into account under the engaged principally test of section 20, and which the Board has considered in its decisions under section 32. Unlike the test based on sales volume of the subsidiary, the market share test would not be subject to manipulation, but would provide for consideration of the volume of business activity of the affiliate in absolute terms.<sup>41</sup>

Finally, the Board believes that any decision regarding engaged principally status should take into account other factors and circumstances present in the pending applications. In the instant cases, the Board believes it significant that each of the three underwriting subsidiaries will maintain their fundamental nature as government securities dealers. They will underwrite a limited range of securities that are closely analogous to securities presently underwritten by member banks or to commercial banking functions, and at levels that would not be substantial relative to their eligible

<sup>36.</sup> Letter from the Board to the Federal Reserve Banks (August 11, 1958), reprinted in Federal Reserve Regulatory Service ("F.R.R.S."), ¶ 3-895.

<sup>37.</sup> Id.

<sup>38.</sup> Matched book activities would consist of repurchase and reverse repurchase agreements for government securities, used by dealers and their financial institutions customers for short term funding, hedging and arbitrage. As government securities dealers, Applicants' subsidiaries would have a high volume of such activity.

<sup>39.</sup> Bankers Trust's and Morgan's reliance on tests based on assets devoted to the activity, income and sales volume, on a "two out of three" basis, are similarly flawed because an affiliate could derive a substantial amount of its income from ineligible activity even though the ineligible activity met the asset and sales volume test, both of which, in the Board's judgment, would be open to increasing the base of eligible activity to support ineligible activity.

<sup>40.</sup> Letter from the Board to the Federal Reserve Banks (August 11, 1958) F.R.R.S. ¶ 3-895. See also, e.g., Board letter dated September 30, 1947.

<sup>41.</sup> Applicants and the Antitrust Division of the Department of Justice argue that the Board is precluded from considering market share information in applying section 20, noting that the "engaged principally" terminology focuses on the relative amount of activity within a particular company. However, the Board is not relying on market share information per se, but as a qualitative factor and as a substitute for a volume test, which is related solely to the activities of a particular affiliate but which the Board believes, in the context of these proposals, is not a reliable measurement criterion alone.

securities activities. Thus, the proposed limited expansion would not transform the government securities dealers into the type of securities affiliates engaged in the general investment banking and securities underwriting business that Congress intended to separate from member banks through section 20.

#### QUANTITATIVE LEVEL OF ACTIVITY PERMITTED UNDER SECTION 20

With respect to the appropriate quantitative level of activity permissible under the section 20 authorization, the Board has determined that a member bank affiliate would not be engaged principally or substantially in underwriting or dealing activity covered by section 20 if its gross revenue from that activity does not exceed a range of between 5 and 10 percent of its total gross revenues. The Board believes a similar range should apply to the market share test the Board has adopted under section 20.

The Board established this range by reference to the Board's past practice for many years in interpreting the "primarily engaged" standard in section 32, which, as noted, covers any substantial underwriting and dealing activity. This approach is, in the Board's judgment, consistent with the Congressional intent underlying section 20 to allow member bank affiliates to engage in underwriting and dealing activities at levels that are not substantial and thus would not raise problems of safety or soundness or risk for affiliated member banks.

In a number of cases over the years, the Board has developed a general guideline that a company would not be primarily or substantially engaged in activities covered by section 32 where those activities accounted for no more than 10 percent of the company's total revenue and the company's volume of such activities was not large in absolute terms or relative to other market participants.42 If the firm was a leading securities underwriter with a large absolute volume of ineligible securities activities, however, the Board has found the firm to be primarily engaged in section 32 activities where the revenue the firm derived from these activities was between 5 and 10 percent of its total gross revenue.43 Generally, where gross revenues from ineligible activity were less than 5 percent, the Board has not found the securities company to be primarily or substantially engaged in ineligible activitv.44

In applying these principles to the present proposals, the Board notes that the volume of ineligible securities activity projected by Applicants could be large in absolute terms, and under their projections Applicants could be a substantial factor in the markets they propose to enter. Accordingly, the Board believes that the lower 5 percent end of the permissible range of activity under section 20 is the appropriate quantitative level for applying the gross revenue and market share tests to these proposals. The Board recognizes that this 5 percent threshold for gross income and market share represents a conservative approach to measuring the level of ineligible underwriting and dealing within the framework established by this Order and the Board's prior decisions under section 32. The Board will review this determination, within one year, after Applicants have gained some experience in operating the proposed underwriting subsidiaries, to assess whether somewhat higher levels of activity up to 10 percent may be permissible consistent with the Board's interpretation of the term engaged principally as encompassing any activity that is substantial.

Applicants contend that the activity permitted under their proposed 10 to 15 percent of activity tests would not be substantial in the context of a government securities subsidiary that would derive 85 to 90 percent or more of activity from permissible activities under their standards for measurement. However, as noted above, the Board has carefully considered the standards and quantitative measures for determining whether an affiliate would be "engaged principally" under the provisions of section 20. The quantitative standards proposed by Applicants exceed the levels which the Board believes represent an appropriate interpretation of the provisions of section 20 that is consistent with both its language and the intention of Congress. In the Board's judgment, at the levels proposed by Applicants, the proposed affiliates would be clearly engaged principally in underwriting and dealing in securities.

In sum, the Board will not consider the underwriting subsidiaries to be engaged principally in ineligible underwriting and dealing activities under section 20 of the Glass-Steagall Act under the conditions established below for the conduct of the activity under the BHC Act, if

- (1) the underwriting subsidiaries derive no more than 5 percent of their total gross revenues from ineligible underwriting and dealing activity on average over any two year period,
- (2) their underwriting activities in connection with each particular type of ineligible security do not account for more than 5 percent of the total amount of that type of security underwritten domestically by

<sup>42.</sup> Letter, dated December 14, 1981, reprinted in F.R.R.S. ¶ 3-939, and Board letter dated May 6, 1953.

<sup>43.</sup> *1d.* and, e.g., Board letters, dated May 12 and June 22, 1954 May 22, 1959, reprinted in F.R.R.S. § 3-896.

<sup>44.</sup> E.g., Board letters, dated May 5, 1934 and May 7, 1962.

all firms (or, in the case of commercial paper, the average amount of dealer-placed commercial paper outstanding) during the previous calendar year, and (3) they limit the amount of each particular type of security held for dealing so as not to exceed the amount of the underwriting market share limitation described in paragraph (2) above.<sup>45</sup>

 Proposed Interlocks Between Applicants' and Their Underwriting Subsidiaries are not Prohibited by Section 32.

Applicants anticipate that one or more officers of the bank holding company will serve as officers or directors of the subsidiaries that would conduct the proposed limited underwriting and dealing activity. The Board has previously applied the restrictions of section 32 to interlocking relationships between a securities firm and a bank holding company with one or more member bank subsidiaries. 12 C.F.R. § 218.114; F.R.R.S. ¶ 3–912. See also F.R.R.S. ¶ 3–948. The Board, however, has permitted an interlocking relationship between a securities firm and a bank holding company that mainly conducted nonbanking activities. F.R.R.S. ¶ 3–889.

In this case, the proposed interlocking relationships between the parent bank holding company and the underwriting subsidiaries would be permissible under section 32 because, even if it is assumed that the restrictions of section 32 should be applied to the parent holding company, under the limitations discussed above on the level of ineligible activity permitted to the subsidiaries, they would not be "substantially" or "primarily engaged" in ineligible activity.

None of the Applicants has proposed that an officer, director, or employee of its bank affiliates serve as an officer, director, or employee of the underwriting subsidiaries and, as discussed in Part III below, the Board has relied upon the absence of such interlocking relationships in its evaluation of the applications under the proper incident to banking standard of section 4(c) (8) of the BHC Act.

#### Part III. Bank Holding Company Act Analysis

In every application under section 4(c)(8) of the Bank Holding Company Act, the Board must find that the proposed activity is "so closely related to banking... as to be a proper incident thereto." This statutory standard requires that two separate tests be met for an activity to be permissible for a bank holding company. First, the Board must determine that the activity is, as a general matter, "closely related to banking." Second, the Board must find in a particular case that the performance of the activity by the applicant bank holding company may reasonably be expected to produce public benefits that outweigh possible adverse effects. 46

Based on guidelines established in National Courier Association v. Board of Governors of the Federal Reserve System, 516 F.2d 1229, 1237 (D.C. Cir. 1975), a particular activity may be found to meet the "closely related to banking" test if it is demonstrated that:

- (1) banks generally have in fact provided the proposed activity;
- (2) banks generally provide services that are operationally or functionally so similar to the proposed activity so as to equip them particularly well to provide the proposed activity; or
- (3) banks generally provide services that are so integrally related to the proposed activity as to require their provision in a specialized form.

The National Courier guidelines are not, however, the exclusive basis for finding a proposed activity closely related to banking,<sup>47</sup> and the Board may consider any other basis that may demonstrate that the activity has a reasonable or close relationship to banking. 49 Federal Register 806 (1984). The U.S. Supreme Court stated in Schwab that the use of these factors by the Board in determining the closely-relatedness of an activity is reasonable and within the Board's discretion. 468 U.S. at 210 n.5, 214.

As a threshold matter, Citicorp and certain other commenters argue that the fact that these proposals are consistent with section 20 represents a Congressional determination that they are permissible for bank holding companies, a determination that may not be limited or revised under section 4(c)(8). This argument is premised on the Supreme Court's observation in *ICI II* that the BHC Act does not impose restrictions on the securities activities of banking institutions that are more severe than those in the Glass-Steagall Act. 450 U.S. at 60-61 n.26.

<sup>45.</sup> J.P. Morgan proposed to measure the amount of ineligible activity it would conduct through JPMS and JPMMF on a consolidated basis. Under that proposal, the total gross income from eligible and ineligible activity of both entities would be combined for purposes of the section 20 "engaged principally" limitation. The Board does not believe that section 20 permits two or more affiliates to combine their ineligible and eligible activity in order to determine whether as a whole the affiliates would be "engaged principally." By its terms, section 20 applies to each individual company affiliated with a member bank. Thus, JPMS and JPMMF each must adhere to the section 20 limitation.

<sup>46.</sup> See Schwab, 468 U.S. at 210; ICI II, 450 U.S. at 57 n.22.

<sup>47. 516</sup> F.2d at 1237.

In the Board's view, however, the restrictions of the Glass-Steagall Act on the securities activities of member bank affiliates and the closely related to banking and proper incident to banking tests in section 4(c)(8) are by their terms independent provisions, each of which must be satisfied before a bank holding company may engage in securities activities. The *ICI II* opinion, the Board believes, supports this analysis.

In ICI II, the lower court had ruled that the BHC Act was intended to prohibit the Board from approving any securities activities for bank holding companies, even if they were permissible under the Glass-Steagall Act. The Supreme Court rejected this ruling, finding no implicit prohibition in section 4(c)(8) that is more restrictive than the Glass-Steagall Act. 48 However, the Court's opinion did not address the relevant issue here-the scope of the Board's discretion under section 4(c)(8) to deny or place prudential limitations on securities activities that, while consistent with the Glass-Steagall Act, may not comply with the separate requirements of the BHC Act. Moreover, Applicants have produced no evidence in the legislative history that the Board was not to exercise its discretion under the closely related to banking and public benefits tests of section 4(c)(8) regarding specific proposals merely because they involve securities activities that are not unlawful under the Glass-Steagall Act.

### A. Closely Related to Banking Analysis.

After carefully considering the facts of record, the Board concludes that underwriting and dealing in commercial paper, municipal revenue bonds and 1-4 family mortgage-related securities, under the limitations discussed in this Order, are closely related to banking, because banks provide services that are so operationally and functionally similar to the proposed services that banking organizations are particularly well equipped to provide such services. As the Board has previously noted, the proposed activities are a natural extension of activities currently conducted by banks, involving little additional risk or new conflicts of interest under the framework established in this Order, and potentially yielding significant public bene-

fits in the form of increased competition and convenience and lower cost.<sup>49</sup> On this basis, the Board has urged the Congress to authorize these activities for bank holding companies as part of a Congressional reevaluation of the powers of banking organizations generally. This view is not held by the Board alone. The other federal banking agencies as well as the U.S. Departments of Treasury and Justice have also supported these activities.<sup>50</sup>

Accordingly, and for the reasons set forth in the *Chase* decision, the Board believes that underwriting and dealing in commercial paper is closely related to banking within the meaning of section 4(c)(8) of the BHC Act. For the reasons set out below, the Board also concludes that underwriting and dealing in the proposed municipal revenue bonds and 1-4 family mortgage-related securities is closely related to banking.<sup>51</sup>

Member banks are actively engaged pursuant to specific legislative authorization in a variety of underwriting and dealing activities that are closely analogous to the proposed municipal revenue bond and mortgage-related securities underwriting activities. Section 16 of the Glass-Steagall Act authorizes member banks to underwrite and deal in certain municipal revenue bonds (generally, those issued for housing, university or dormitory purposes), as well as municipal general obligation bonds ("GOs"). 52 12 U.S.C. 24 Seventh. Bank-eligible municipal revenue bonds accounted for between 31 and 52 percent of all municipal revenue bonds issued during the years 1980 to 1984, with banks accounting for between 19 to 26 percent of

<sup>48. 450</sup> U.S. at 77. The Court stated "Congress did not intend the BHC Act to limit the Board's discretion to approve securities-related activities as closely related to banking beyond the prohibitions already contained in the Glass-Steagall Act." (emphasis added). The Board notes that the legislative history to which the Court refers to support this conclusion indicates that the BHC Act was not intended to liberalize the Glass-Steagall Act. That legislative history does not indicate, as Applicants claim, that activities that do not violate the Glass-Steagall Act are exempt from scrutiny under the standards of the BHC Act. Under the plain terms of the BHC Act, such activities clearly are not permissible for bank holding companies unless they pass muster under the standards of section 4(c)(8) of the Act.

Volcker, Chairman, Board of Governors of the Federal Reserve System), reprinted in 70 FEDERAL RESERVE BULLETIN 312, 316 (1984); Statement of Chairman Volcker Before the Subcomm. on Commerce, Consumer & Monetary Affairs of the House Comm. on Government Operations (June 11, 1986), reprinted in 72 FEDERAL RESERVE BULLETIN 541, 549 (1986). See also S. Rep. No. 560, 98th Cong. 2d Sess. 15-16 (1984).

<sup>50.</sup> Competitive Equity in the Financial Services Industry: Hearings on S.2181 Before the Senate Comm. on Banking, Housing, and Urban Affairs ("Hearings on S.2181"), 98th Cong., 2d Sess. 1221, 1274, 1550, 1714 (1984) (Statements of C. Todd Conover, Comptroller of the Currency, William M. Isaac, Chairman, F.D.I.C., Douglas H. Ginsburg, Deputy Assistant Attorney General, U.S. Department of Justice, and Donald T. Regan, Secretary of the Treasury, respectively).

<sup>51.</sup> While Applicants have applied to underwrite and deal in mortgage-related securities generally, the Board believes that, at least on the current record, only underwriting and dealing in mortgage-related securities backed by 1-4 family residential mortgages will avoid significant risks and other adverse effects, as explained below.

<sup>52.</sup> GOs represent a general debt obligation of a municipality, while a revenue bond represents a charge against the revenues of a facility or project financed by the bonds.

the underwriting market.<sup>53</sup> Banks have also historically underwritten a major share of new general obligation bond issues.<sup>54</sup>

Section 16 also authorizes member banks to underwrite and deal in mortgage-related securities that are issued or guaranteed by federal agencies. As Congress has recognized, banks are extensively involved in this activity.<sup>55</sup>

In addition to the fact that banks already underwrite and deal in certain types of municipal revenue bonds and mortgage-related securities, banks have developed extensive expertise in underwriting and dealing in U.S. government and agency securities and are among the nation's leading underwriters of these securities. For example, banks or bank affiliates constitute 17 of the 40 primary dealers in the government securities market and are among its largest participants. <sup>56</sup> In addition, banks are among the nation's largest underwriters of general obligation bonds.

In the Board's view, definite functional and operational similarities exist between the securities that member banks may underwrite and deal in and the municipal revenue and mortgage-related securities proposed by Applicants for their underwriting subsidiaries. The techniques involved in underwriting and dealing in these bank-eligible securities are the same, or substantially the same, as those that would be involved in conducting the proposed municipal revenue and mortgage-related securities activities. In each case the underwriter must perform substantially identical functions of credit evaluation and analysis, negotiation or bidding, distribution, and dealing. For example, investment banking firms that underwrite and deal in municipal revenue bonds generally utilize the same personnel and marketing techniques for their activity in general obligation bonds.57

The Board also notes that the evaluation and credit analysis that would be performed in connection with underwriting municipal revenue bonds and mortgagerelated securities is functionally and operationally similar to the evaluation and credit analysis banks conduct when making loans to customers and in connection with their investment advisory and trust activities. In addition, Applicants' role in advising issuers in structuring an offering and contacting potential purchasers is functionally and operationally similar to a bank's role in advising customers and arranging loan participations and syndications.

The Board also believes that underwriting and dealing in these securities is functionally and operationally similar to the role of a bank in underwriting and dealing in money market instruments, establishing mortgage pools and evaluating the underlying risks of the constituent elements in a pool, advising municipalities and other issuers and assisting them in the private placement of their notes, and generally assessing credit and interest rate risk.<sup>58</sup>

Protestants contend that there is a major difference between underwriting activities permitted member banks under the Glass-Steagall Act and those proposed by Applicants, because bank-eligible securities are generally offered to dealers through competitive bidding while the price of most revenue bonds and other securities involved in Applicants' proposals is usually negotiated. Given the wide commercial bank participation in the underwriting of and dealing in U.S. government, municipal and other bank-eligible securities as a whole, the Board believes that banks are sufficiently familiar with negotiating processes as well as those involved in competitive bidding. The Board also notes that banks are involved in the negotiating process through their private placement activities for ineligible securities, including ineligible municipal revenue bonds, and their securities activities overseas.<sup>59</sup> Moreover, in the case of municipal securities specifically, this distinction is not significant because many revenue issues are offered by public bid, and the number of general obligations bonds sold by negotiation has been increasing.60

With respect to mortgage-related securities, the Board notes that the operations and functions (including credit and cash flow analysis, bidding process, distribution and dealer activities) involved in underwriting and dealing in bank-eligible mortgage-related securities and 1-4 family mortgage-backed securities

<sup>60.</sup> F. Fabozzi, S. Feldstein, I. Pollack, F. Zarb, *The Municipal Bond Handbook*, Volume One 172-73 (1983).

are virtually identical, regardless of whether a federal or private entity issues or guarantees the securities involved.61 Because the mortgage-backed securities proposed for the subsidiaries are not directly issued or guaranteed by the federal government or governmentsponsored agencies, the subsidiaries will be required to conduct a more extensive credit analysis and evaluation of issuers and underlying mortgages than in underwriting bank-eligible mortgage-related securities. Given the experience of Applicants and banking organizations generally in evaluating credit in lending and investment functions<sup>62</sup> as well as in permissible underwriting activities where credit analyses are commonly made, for example, in connection with underwriting general obligations of States and municipalities, the Board does not believe this difference between bank-eligible mortgage-related securities and Applicants' proposed activity is significant. In this regard, the Board notes that banks underwrite substantial amounts of housing-related municipal bonds,63 an activity that involves substantially the same credit analysis function as will be required for Applicants' mortgage-related securities.

Based on the foregoing analysis, the Board concludes that banking organizations, including Applicants, perform services that are functionally and operationally similar to the proposed activities of underwriting and dealing in certain municipal revenue bonds and 1-4 family mortgage-related securities and that they would be particularly well equipped to provide these underwriting and dealing services.

Citicorp and Bankers Trust also propose to underwrite and deal in CRRs. Although they note certain similarities between CRRs and mortgage-related securities and between banking activities involving the underlying loan obligations represented by those securities, the Board does not believe that the record before the Board at the present time provides a sufficient basis for it to make the formal finding required by the BHC Act that underwriting and dealing in CRRs is closely related to banking and a proper incident thereto. The market for CRRs is relatively new and untested compared to the market for the 1-4 family mortgage-related securities and municipal revenue bonds involved in these proposals. As Citicorp notes, the securitization of consumer loans and receivables is now in its early stages, and for that reason, "it is impossible to predict with certainty the direction in

which this activity will evolve." <sup>64</sup> The Board, however, will reconsider this matter within the next sixty days on the basis of fuller submissions by Applicants regarding the types of assets that will be securitized, the manner in which this will be accomplished, and other matters bearing on risk. This will enable the Board to examine appropriately the risks involved and whether any safeguards are necessary to meet the requirements of the BHC Act.

#### B. Proper Incident to Banking Analysis.

In order to approve an application to engage in a nonbanking activity under section 4(c)(8) of the Act, the Board must determine that a proposed activity is a "proper incident" to banking by determining whether the performance of the activity by the applicant bank holding company may reasonably be expected to produce public benefits, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices. 12 U.S.C. § 1843(c)(8). Based upon the facts of record and for the reasons and subject to the limitations set out below, the Board finds that the proposed underwriting and dealing activities (other than for CRRs) may reasonably be expected to result in substantial public benefits that outweigh possible adverse effects.

## 1. Public Benefits.

The Board believes that the expansion of Applicants' activities to include underwriting and dealing in municipal revenue bonds, 1–4 family mortgage-related securities, and commercial paper should result in substantial public benefits in the form of increased competition, greater convenience and gains in efficiency.

Increased Competition. The Board has previously recognized that the de novo expansion by a bank holding company into nonbanking activities generally may be expected to be pro-competitive and result in increased competition.<sup>65</sup> These proposals represent a

<sup>61.</sup> See generally C. Edson and B. Jacobs, Secondary Mortgage Market Guide (1985).

<sup>62.</sup> See, e.g., 12 C.F.R. 1.5, 1.8; M. Stigum, The Money Market 657 (2d ed. 1983).

<sup>63.</sup> See S. Rep. No. 293, 98th Cong. 1st Sess. 9 (1983) ("National banks . . . are currently intimately involved in mortgage finance including mortgage revenue bonds and the federal mortgage market agencies.")

Letter, dated April 19, 1985, to Federal Reserve Bank of New York, 8-9.

<sup>65.</sup> See, e.g., section 225.24 of Regulation Y (12 C.F.R. 225.24); 49 Federal Register 814 (1984). Congress has also recognized that public benefits of increased competition and innovation may be anticipated through de novo expansion by bank holding companies into nonbanking activities. H. R. Rep. No. 1747, 91st Cong. 2d Sess. 16-17 (1970); S. Rep. No. 1084, 91st Cong. 2d Sess. 15-16 (1970); Alabama Ass'n of Insurance Agents v. Board of Governors of the Federal Reserve System, 533 F.2d 224, 249 (5th Cir. 1976), cert. denied, 435 U.S. 904 (1978).

de novo expansion by Applicants into new segments of the markets for commercial paper, municipal revenue and 1-4 family mortgage-related securities, and thus may be expected to increase competition. The Board concluded in the *Chase* case that the expansion of a bank holding company's activities in the commercial paper market, which is highly concentrated, would foster competition.

Concentration ratios for those segments of the mortgage-related and municipal securities markets in which banking organizations have not participated are significantly higher than those for the bank-eligible segments of these markets. The introduction of new competitors into these markets may be expected to reduce concentration levels and, correspondingly, to reduce financing costs, underwriting spreads, and increase the availability of services to issuers. Increased competition may be expected to benefit smaller and infrequent issuers, such as rural communities, which currently have relatively few choices among underwriters.

Benefits in the form of reduced financing costs and increased availability may be expected to accrue as well to the original borrowers under mortgage-related and municipal securities—homeowners and public entities—whose ability to borrow is directly related to the secondary market for their liabilities. Increased competition may also foster innovation among participants in these markets.

In this regard, the report of the Senate Committee on Banking, Housing and Urban Affairs on the proposed Financial Services Competitive Equity Act (S. 2851, 98th Cong., 2d Sess. (1984)) concluded that authorization for bank holding companies to underwrite municipal revenue bonds "will result in significant benefits to governmental issuers of these obligations and thus to their residents and taxpayers who must ultimately bear the cost of public borrowing."67 The Board also notes that associations of state and municipal governmental organizations, including the National Governors Association and the National League of Cities, support bank holding company entry into municipal revenue bond underwriting in order "to increase competition for underwriting municipal revenue bonds and in view of the potential for this initiative to reduce significantly the cost of revenue financGreater Convenience and Increased Efficiency. The Board also finds that approval would result in public benefits in the form of greater convenience to customers and increased efficiency in the provision of the proposed services. As the Board has previously concluded, underwriting and dealing in commercial paper by a bank holding company would produce these public benefits.

Bank holding companies would be able to offer their borrowing customers an additional service and means of financing that may be more economical for the borrower. In addition, Applicants would be able to offer commercial paper to the same institutional investor customers that currently purchase other money market instruments, such as short-term U.S. government securities, certificates of deposit and bankers' acceptances, thereby increasing services to buyers of money market instruments and leading to greater efficiency in the market for short-term debt.

Issuer-customers of Applicants' existing underwriting services in municipal and mortgage-related securities would no longer be restricted to the bank-eligible segments of the markets for those securities when doing business with these bank holding companies. The increase in the number of dealers in these securities would also be likely to enhance liquidity in the markets for these securities, thereby increasing market efficiency.

More efficient operation of the markets for the proposed securities would benefit investors and issuers who are customers of Applicants and other market participants by narrowing the underwriter's and dealer's spread on sales transactions and making it easier to match buyers and sellers of the proposed securities.

## 2. Adverse Effects.

In the Board's December 1986 decision permitting Bankers Trust to place commercial paper as agent, the Board adopted a framework which had been put in place by Bankers Trust in order to address the possibility of adverse effects, such as unsound banking practices or conflicts of interest, that the Board must

ing." National trade associations of home builders and realtors support bank holding company entry into the mortgage-backed securities underwriting business in order to increase competition. 69

consider under the "public benefits" test in section 4(c)(8). To When the Board ordered a hearing on these applications, the Board requested specific comment on whether the Bankers Trust framework or other limitations that the Board was considering and that were listed in the Hearing Order should be adopted with respect to these proposals.

Comments of Interested Persons. The protestants believe that significant adverse effects are presented by the proposal, including potential conflicts of interest caused by the underwriting subsidiaries' "salesman's stake" and promotional incentives in the securities it underwrites or deals in, loss of public confidence in the bank if the affiliate experiences losses on its securities activities, risk to the bank holding company as a result of possible underwriting losses by the affiliate, undue concentration of resources resulting from greater domination of financial markets by banking organizations, and unfair competition, such as the affiliate obtaining funding from low cost bank deposits or access to confidential customer information held by the bank.

The protestants and several other commenters also expressed doubts as to the effectiveness of the suggested conditions and limitations to address these concerns. The SIA believes conditions such as those listed in the Board's Hearing Order would be inadequate to address all possible concerns. Salomon Brothers expressed the view that where the same or affiliated entities are both lenders and underwriters, no safeguards would be fully adequate to prevent abuses. Other protestants believe that restrictions must also be directed at establishing a "level playing field" for banking organizations and investment banking firms engaged in the proposed activities.

Applicants and certain other commenters contend no significant adverse effects would arise under these limited proposals involving securities with which bank holding companies have experience, particularly in light of the voluntary controls Applicants would impose on themselves to limit risk and prevent conflicts and the applicable requirements of securities laws and regulations. A few commenters believe the Board should establish further conditions to address risk or conflicts and to insulate the underwriting subsidiaries from their affiliated banks, such as a capital adequacy requirement for the underwriting subsidiary and limitations on transactions between the subsidiary and bank affiliates.

Applicants and certain other banking organizations objected to a number of the conditions listed in the

Board's Hearing Order. In general, Applicants believe that any conflicts presented by the proposals are similar to the conflicts already successfully handled by bank holding companies and investment banking firms and that existing regulation by the SEC of brokerdealers, rules of the National Association of Securities Dealers ("NASD") and the Municipal Securities Rulemaking Board ("MSRB") applicable to broker-dealers trading in the proposed securities, and fiduciary requirements under common law and banking regulation are adequate to address the Board's concerns. They commented that a number of the conditions being considered by the Board to address possible conflicts of interest could interfere with their ability to compete or would be unnecessary or confusing in light of existing regulation.

Based on the record of the applications, and after careful consideration of the comments of interested parties, the Board finds that the potential for conflicts of interest, unsound banking practices, as well as other adverse effects are not likely to result from these proposals under the conditions and limitations established by the Board in this Order for the conduct of the proposed activities as well as the various statutory protections Congress has provided over the years to regulate the conduct of these activities. As discussed below, the Board has carefully considered the comments relating to the need for specific limitations and has concluded that, although existing regulation addresses certain of the concerns of the Board, there are areas in which the existing regulatory framework has not been demonstrated on the present record to be effective where commercial banking and investment banking organizations are affiliated. The Board notes that the BHC Act addresses broader concerns relating to safety and soundness and maintenance of public confidence in banking organizations and impartiality in the credit-granting process, concerns that are not addressed by the statutory and regulatory provisions relating to investor protection to which Applicants refer. Accordingly, the Board has determined that this existing regulatory framework needs to be supplemented through additional limitations drawn from the list on which the Board sought comments at the hearing in order to address issues peculiar to the affiliation of ineligible securities underwriters and banking organizations.

General Considerations. At the outset, the Board notes that there are several general considerations that support a finding that these proposals as limited by Applicants and in this Order would not produce significant adverse effects. First, a great many of the adverse effects the Board is charged with considering under the public benefits test of section 4(c)(8), such as unsound banking practices and conflicts of interest, relate to

<sup>70.</sup> The Board adopted a similar set of limitations to address possible adverse effects in approving the application by Chase to underwrite and deal in commercial paper.

potential damage to the holding company's subsidiary bank that might result from the conduct of proposed nonbanking activity. Accordingly, while a bank cannot be completely insulated from the fortunes of an affiliated nonbanking subsidiary, the Board believes that the greater the extent to which the nonbanking activity of a nonbank subsidiary of a holding company is insulated, both structurally and operationally, from the holding company's subsidiary banks, the less likely it is that adverse effects related to the conduct of the nonbanking activity will affect affiliated banks.<sup>71</sup>

In determining that adverse effects are not likely in these cases, the Board places substantial reliance on the fact that the proposed underwriting and dealing activities would be separated from the activities of Applicants' subsidiary banks, both through separate incorporation and through financial and operational limitations, explained below, that are specifically designed to ensure that all aspects of the proposed securities activities are insulated in operation from subsidiary depository institutions. For example, the proposed activities will not be conducted by Applicants' subsidiary banks or by the banks' personnel. Each Applicant has agreed that its underwriting subsidiary will have no common officers, directors, or employees with Applicant's subsidiary banks. The Board believes that the prohibition on personnel interlocks should extend to any thrift subsidiary, as well, in order to assure that all federally-insured depositors are protected as much as possible. In addition, the Board requires that affiliated banks may not act as agents for or engage in marketing activities on behalf of the underwriting subsidiaries. The underwriting subsidiaries should also have offices separate from any affiliated bank.72

Moreover, transactions between the affiliated banks and the underwriting subsidiaries will be strictly limited, as discussed below. The underwriting subsidiaries will also be subject to a number of disclosure requirements designed to ensure that the public will not confuse the underwriting subsidiaries with their affiliated banks, including a requirement that the underwriting subsidiaries provide their customers with a special disclosure statement describing the difference between them and their affiliated banks. Limitations

are also imposed preventing self-dealing in transactions between these subsidiaries and their affiliated banks acting in a fiduciary capacity. The Board also requires that the underwriting subsidiaries' access to customer records of the affiliated banks be limited and that the subsidiaries' affiliates be restricted in extending credit to customers for the purchase of securities from the subsidiaries during the course of the underwriting.

Under limitations imposed by the Board, the underwriting subsidiaries would be capitalized on a standalone basis, that is, each subsidiary must be capitalized independently of the parent company and its subsidiary banks in accordance with industry norms.

Second, the limited expansion of activity proposed in the applications and the fact that the subsidiaries would remain fundamentally government securities dealers further support the findings that the specific adverse effects cited by the protestants are not likely to be a significant product of these proposals. The activity of each underwriting subsidiary with regard to ineligible securities would be limited in terms of income and market share so that they would not be substantial in the context of the subsidiary's overall operations and, moreover, each subsidiary would underwrite only a limited number of securities that are closely analogous, if not in most respects identical, to securities banks are authorized to underwrite and deal in or to commercial banking products. The fundamental nature of these subsidiaries would not be changed. They would remain government securities dealers and would in no sense be engaged in a full investment banking business.

Unsound Banking Practices. The Board has considered the extent to which these proposals would result in unsound banking practices or excessive financial risk to Applicants or their subsidiary banks through the underwriting subsidiaries' activities or through imprudent financial transactions with the underwriting subsidiaries or made for their benefit. In addition, the Board has considered whether the public association and economic union between the underwriting subsidiaries and their banking affiliates could lead to a loss of public confidence in Applicants' subsidiary banks if losses are sustained by the underwriting subsidiaries or by persons dealing with those subsidiaries.

Risk of Loss. Protestants allege that the proposals will result in unsound banking practices because the underwriting subsidiaries, acting as principals with respect to ineligible securities, could lose their own funds as a result of these operations. Such losses, protestants allege, could damage public confidence in affiliated banks and the parent company's ability to raise funds to provide to subsidiary banks.

The Board finds, however, that the risk of loss to

<sup>71.</sup> Bankers Trust, 73 FEDERAL RESERVE BULLETIN at 149, quoting National Westminster Bank, PLC, 72 FEDERAL RESERVE BULLETIN 584, 588 (1986), petition for review pending, No. 86–1412, (D.C. Cir.).

<sup>72.</sup> The Board notes that the FDIC has recently proposed to amend its regulations governing the securities activities of affiliates of nonmember banks to provide that if the bank conducts business in the same location as the affiliate the bank must use physically separate offices or office space from that used by the affiliate. Such offices would have to be clearly and prominently identified so as to distinguish the bank from the affiliate. 52 Federal Register 11,492, 11,498 (April 9, 1987).

Applicants or their underwriting subsidiaries as a result of these proposals is not excessive or inconsistent with prudent banking standards. As a preliminary matter, the Board notes that Applicants have applied to conduct a restricted form of underwriting and dealing that would be limited to securities that Congress has specifically authorized member banks to hold for their own account in the exercise of prudent banking judgment.73 In fact, Congress recently authorized national banks to invest without limitation in private mortgage-related securities subject to regulations of the Comptroller of the Currency<sup>74</sup> on the basis that these securities do not jeopardize the safety and soundness of depository institutions because of the low-risk characteristics of the investment, i.e., "a pool of many mortgages with relatively low default risk as well as mortgage insurance on both the individual mortgages and the pool."75 Thus, to the extent the underwriting subsidiaries may hold ineligible securities for their own account as a result of these proposals, they will not be subject to any excessive or unmanageable risk of loss.

The Board, however, recognizes that in addition to credit risk, an underwriter and market maker also assume the risk of adverse changes in the market price of the securities involved. In addition, an underwriter or market maker may hold at any one time a substantially greater proportion of securities of a particular issuer than would be likely in the case of investors and must generally be prepared to provide liquidity for an issue. Nevertheless, the Board believes that the limited extension of activities proposed for the underwriting subsidiaries, which is substantially similar to operations safely and soundly being conducted presently by member banks, would not result in significant or

excessive risk. <sup>76</sup> The risks associated with underwriting and dealing in any revenue bond, whether eligible or not, are generally a function of the price volatility of the security, as well as the cash flow and viability of the project being financed. These risks are not, in the Board's view, significantly greater for ineligible revenue bonds than for eligible bonds, given the very close functional similarity between the two kinds of obligations. <sup>77</sup> The same analysis applies to the proposed underwriting of ineligible mortgage-backed securities, whose risk characteristics are only slightly different from those of certain kinds of eligible mortgage-backed securities.

Finally, as the Board recognized in *Chase*, underwriting and dealing in commercial paper is an activity that is similar to loan syndication and other similar operations presently conducted safely and soundly by member banks and involves a security that member banks may invest in as principal.<sup>78</sup>

The risk of underwriting and dealing in these securities is further mitigated by Applicants' experience in performing key functions that are similar to those performed by an underwriter or dealer in these types of debt securities, including credit analysis, evaluation of interest rate risk, financial planning, advice to issuers and assisting them in the private placement of their notes, and risk reduction techniques, such as hedging, diversification and other precautions applicable to the proposed activities.

Moreover, the Board notes that the underwriting subsidiaries will be subject to regulation under the federal securities laws. In particular, the subsidiaries will register with the SEC as broker-dealers and will be subject to financial reporting, anti-fraud and financial

<sup>73.</sup> A bank may exercise its prudent banking judgment to invest in any amount of the proposed mortgage-related securities if it is satisfied with the creditworthiness of the obligor. 12 U.S.C. § 24 Seventh; 12 C.F.R. 1.3 and 1.4. In the exercise of its prudent banking judgment, a bank may invest in the proposed municipal revenue bonds if it believes the obligor is creditworthy and the security is marketable. 12 U.S.C. § 24 Seventh; 12 C.F.R. 1.3 and 1.5. Banks have traditionally purchased commercial paper for their own account. See Bankers Trust 1, 468 U.S. at 158 n.11.

<sup>74.</sup> Pub. L. No. 98-440, 98 Stat. 1691 (Oct. 3, 1984), amending 12 U.S.C. § 24.

<sup>75.</sup> S. Rep. No. 293, 98th Cong., 1st Sess. 6 (1983). Statistics also indicate that the performance of mortgage-related securities based on conventional (i.e., non-federally insured) mortgages has been comparable to those issued by or backed by the Federal agencies and/or Federal Housing Administration ("FHA") insurance. M. Waldman and S. Guterman, Mortgage Securities: 1972-84, Historical Performance and Implications for Investors (Salomon Brothers Inc., March 1985).

<sup>76.</sup> See S. Rep. No. 560, 98th Cong., 2d Sess 16 (1984).

The record does not show that there has been any particular safety and soundness or conflict of interest problems or abuses in the case of banks underwriting municipal general obligation bonds. See Moratorium Legislation and Financial Institutions Deregulation: Hearings Before the Senate Comm. on Banking, Housing and Urban Affairs, 98th Cong., 1st Sess. 192 (1983) (statement of Paul A. Volcker).

<sup>77.</sup> In some cases, ineligible revenue bonds have higher ratings and lower yields than municipal securities eligible for underwriting by banks, including general obligation bonds. For example, according to Moody's 1985 Municipal and Government Manual, the general obligation bonds of New York City, which are eligible for bank underwriting, were rated "Baa," whereas the ineligible revenue bonds of related agencies, such as the New York City Transit Authority and the Triborough Bridge and Tunnel Authority were rated "Aaa" and "Aa," respectively.

<sup>78.</sup> In addition, the Board has previously noted that the market risk associated with underwriting commercial paper is minimal. Before commercial paper is issued, dealers usually survey prospective purchasers to ascertain likely interest. Thus, the probability that the underwriter would incorrectly assess market conditions and would accordingly be required to hold large amounts of commercial paper for its own account is small. In any event, the short-term maturity of commercial paper, thirty days on average, limits the potential for large capital losses to the underwriting subsidiary.

494

responsibility rules applicable to broker-dealers. These rules include the SEC's net capital rule (SEC Rule 15c3-1), which imposes capital requirements on broker-dealers that vary with the degree to which a broker-dealer acts as a principal and deals with the public. As noted below, Applicants' subsidiaries will maintain capital in excess of these requirements. In addition, the underwriting subsidiaries will be subject to the rules and regulations of the NASD and the MSRB. These requirements provide further protection against financial loss as a result of the proposed activities. The Board has previously recognized that in certain areas regulation under the federal securities laws is relevant to and may mitigate the Board's concerns over the possibility of adverse effects under section 4(c)(8) of the BHC Act.79

While the Board finds that the proposed activities do not generally present concerns about undue financial loss, the Board believes that underwriting and dealing in certain limited types of ineligible securities could give rise to unacceptable risk of loss, at least as indicated by the record currently before the Board. Therefore, the Board believes it prudent at this stage to place conditions on the types of ineligible securities that may be underwritten and dealt in pursuant to this Order. While municipal revenue bonds have not generally been characterized by substantial risk, certain new types of revenue bonds are being developed, particularly in the area of securities used to promote industrial development, that are riskier than traditional municipal securities or that may be operationally and functionally similar to corporate debt securities. Accordingly, the Board believes it appropriate to require that the underwriting subsidiaries may not, without further authorization from the Board, underwrite or deal in municipal securities other than those that are rated as investment quality (i.e., in one of the top 4 categories) by a nationally recognized rating agency.80 The Board notes that most of the types of revenue bonds Applicants propose to underwrite have not generally been associated with excessive risk and are frequently backed by insurance or letters of credit furnished by third parties, which further reduces the risk associated with these securities.

In light of recent adverse developments in the market for mortgage-related securities involving banking and thrift organizations, the Board also believes it appropriate to impose specific limitations on the types of such securities offered by the underwriting subsidiaries. Accordingly, the Board believes that Applicants' proposals to underwrite and deal in ineligible residential mortgage-related securities should be limited to obligations that are secured by or represent an interest in 1-4 family residential mortgages until additional experience is gained in other residential mortgage-related securities. In the Board's view, there are potentially greater risks associated with larger multifamily housing projects, which often have an element of commercial real estate development. The Board believes that mortgage-related securities (other than those collateralized by 1-4 family residential mortgages) may in many instances involve significantly different and greater risk characteristics more akin to corporate underwriting, which the current record does not demonstrate may be handled safely with minimum risk within a bank holding company system. In addition, the mortgage-related securities collateralized by 1-4 family residential mortgages must be rated as investment quality (i.e., in one of the top 4 categories) by a nationally recognized rating agency.

Finally, to insure that the subsidiaries' commercial paper activities remain limited to the kinds of obligations normally sold in the recognized commercial paper market, the underwriting subsidiaries may underwrite and deal in only prime quality, short-term obligations that are exempt from the registration requirements of the Securities Act of 1933 and that have minimum denominations of at least \$100,000.81

The Board also finds that even if the underwriting subsidiaries were to encounter losses associated with the conduct of the proposed activities, these losses are not likely to represent any unwarranted risk of loss to the parent companies or Applicants' other subsidiaries under the various limitations and conditions discussed in this Order, which insulate the underwriting and dealing activities, both structurally and operationally from Applicants' subsidiary banks. These limitations serve to prevent the underwriting subsidiaries' functions from draining the resources of the banks or from otherwise producing unsound banking practices.

Damage to Public Confidence. The Board also has determined that the proposed activities are not likely to damage public confidence in Applicants' subsidiary

<sup>79.</sup> E.g., BankAmerica Corporation, 69 FEDERAL RESERVE BULLETIN 105, 113 (1983); Fidelcor, Inc., 70 FEDERAL RESERVE BULLETIN 368, 369 (1984).

<sup>80.</sup> The Board notes that the underwriting subsidiaries proposed to underwrite "public ownership" industrial development bonds ("IDBs"), i.e., tax exempt bonds where the issuing municipality or the state or local governmental unit on behalf of which the bonds are issued is treated for federal income tax purposes as the sole owner of the facility being financed. Without further approval from the Board, the underwriting subsidiaries may underwrite or deal in only these IDBs.

<sup>81.</sup> Commercial paper that qualifies for exemption under that Act typically is short-term (maturity of less than nine months), has large minimum denominations, and is issued by the largest and financially strongest corporations.

banks. First, the Board notes that damage to the reputation of affiliated banks is most likely to occur if the underwriting subsidiaries or customers who buy securities from them suffer losses. As explained above, the risk of loss on the kinds of securities that the underwriting subsidiary will underwrite or deal in is carefully circumscribed. Also as explained above, under this proposal as approved by the Board, there are strict barriers between the underwriting subsidiaries and the affiliated banks, so that neither Applicants nor their subsidiary banks are responsible for any losses suffered by the underwriting subsidiaries.

Finally, in order to reduce further the association in the public mind between the bank holding company and its underwriting subsidiary and to prevent the direct or indirect involvement by the holding company in the ineligible activity approved only for the underwriting subsidiary, the Board requires that each underwriting subsidiary provide to each of its customers a special disclosure statement describing the difference between the underwriting subsidiary and its banking affiliates and pointing out that the obligations of the underwriting subsidiary are not obligations of an affiliate bank and that the bank is not responsible for securities sold by the subsidiary. The statement should also disclose that an affiliated bank may be a lender to an issuer of ineligible securities underwritten or dealt in by the subsidiary and refer the customer to relevant disclosure documents for details. The Board notes that the Federal Deposit Insurance Corporation has recently proposed to require such disclosure in the case of affiliates of nonmember banks (52 Federal Register 11,492, 11,497 (April 9, 1987)) and that Citicorp has indicated it proposes to provide a similar disclosure statement.

In the Board's view, the underwriting subsidiary should also disclose any material lending relationship between the issuer and a bank or lending affiliate of that subsidiary, as required under the securities laws, and in every case whether the proceeds of that issue will be used to repay outstanding indebtedness to affiliates. In this regard, the Board notes that Citicorp, for example, recognizes that there should be extensive disclosure in the offering documents of any interest of an affiliated bank related to securities underwritten by CSI.82

The Board also requires that each underwriting subsidiary and any affiliated bank or thrift institution not engage in advertising or enter into an agreement stating or suggesting that an affiliated bank or thrift institution is responsible for the underwriting subsidiary's obligations. Applicants have each agreed to this limitation and certain other limits related to bank safety and soundness that are contained in the proposed section 23B of the Federal Reserve Act.<sup>83</sup>

To guard further against possible erosion of the public confidence in affiliated banks, no bank or thrift affiliate should act as agent for, or engage in marketing activities on behalf of, an underwriting subsidiary. The Board notes that Citicorp and Morgan have voluntarily agreed to such restrictions. In this regard, prospectuses and sales literature relating to securities underwritten or traded by the underwriting subsidiaries may not be distributed by bank or thrift affiliates; nor should any such literature be made available to the public at any offices of any such affiliate, unless specifically requested by a customer. (See 12 C.F.R. 225.125(h) regarding similar limitations on certain investment advisory activities of bank holding companies with respect to investment companies). Additionally, affiliated banks or thrift institutions may not express an opinion with respect to the advisability of the purchase of ineligible securities underwritten or dealt in by the underwriting subsidiary, unless the bank or thrift affiliate notifies the customer that its affiliated underwriting subsidiary is underwriting or making a market in the security.

Conflicts of Interest. In determining whether the proposed underwriting and dealing activities, as limited above, are a proper incident to banking, the Board also has considered whether the activities would result in conflicts of interest. Given that the proposed activities would not be a substantial activity of the underwriting subsidiaries, the fact that banks have engaged in substantially similar activities without giving rise to significant conflicts, and the limitations on the activity as discussed below, the Board believes that any potential conflicts arising from the proposal are manageable and would not be significant.

At the outset, there are, in the Board's view, certain factors that limit the potential conflicts of interest that can reasonably be expected as a result of these proposals. First, as explained above, the limited underwriting and dealing operations in municipal revenue bonds, private mortgage-backed securities, and commercial paper would be performed by separate subsidiaries

<sup>82.</sup> Morgan and Bankers Trust object to these conditions on the grounds that similar types of disclosures are required under the federal securities laws. In the Board's view, however, specific articulation of these disclosure requirements as a condition of the approval of these applications will help assure that public confidence in the subsidiary banks will not be impaired.

<sup>83.</sup> See S. 2851, 98th Cong., 2d Sess. (1984), 130 Cong. Rec. S 11162, S 11166-67 (September 13, 1984).

that are substantially insulated from the operations of the affiliated banks. Second, although to some extent the potential for conflicts of interest exists in connection with permissible securities and lending activities presently engaged in by member banks, there is no evidence that bank underwriting of eligible securities over the past 50 years has produced serious conflicts of interest or other abuses or encouraged imprudent lending practices.<sup>84</sup> Because the proposed activities involve securities that are substantially similar to those presently underwritten and dealt in by banks, the Board believes that the potential for significant or new conflicts of interest with respect to the proposed ineligible securities would be manageable.

In this regard, the Board notes that in approving proposed legislation to allow bank holding companies to underwrite municipal revenue bonds, the Committee on Banking, Housing, and Urban Affairs of the U.S. Senate relied on the similarity of the activity to bank eligible underwriting activity and the fact that banks have competed in the activity "safely and fairly for more than 50 years." <sup>85</sup>

The Board notes that, in the case of municipal revenue bonds, the fact that the issuer is a public entity makes potential conflicts less likely since these entities generally do not rely on bank lending for most of their funding. Similarly, issuers of securities backed by mortgages on 1-4 family residences do not rely significantly on bank funding.86 Moreover, as the Board noted in approving commercial paper agency and principal activities in Bankers Trust and Chase, serving as a dealer in commercial paper is very similar in function to that of a lead bank in arranging loan participations or syndications, an operation that banks have traditionally performed. There is no evidence that banks' loan participation activities have produced serious conflicts of interest. Finally, while these general factors clearly reduce the potential for conflicts of interest, the Board believes that certain additional limitations, similar to those applied in the Bankers Trust and Chase decisions, are appropriate.

Credit to Purchasers of Securities. Protestants allege that Applicants' subsidiary banks may be encouraged to make imprudent loans to depositors for the

purchase of securities underwritten by their affiliates. The Board notes that the possible temptation to extend credit for such purchases was a major concern leading to the enactment of the Glass-Steagall Act and that preserving the soundness and impartiality of credit granting is a major concern of the Board and other bank regulators under the banking laws. In order to address these concerns, the Board believes that it is appropriate to require that no lending affiliate of the underwriting subsidiary may extend credit to a customer that is secured by, or for the purpose of purchasing, any ineligible security that the subsidiary underwrites during the course of the underwriting or for the purpose of purchasing from the underwriting subsidiary any ineligible security in which the underwriting subsidiary makes a market.87 The Board notes Citicorp proposed a substantially similar limitation in connection with CSI's underwriting activities.

Credit to Issuers of Securities. The protestants also assert that a related conflict may also arise when Applicants' bank affiliates extend credit to issuers of securities underwritten or dealt in by the underwriting subsidiaries. It is argued that banks might be tempted to make unwise loans to improve the financial condition of companies whose securities are underwritten or dealt in by an affiliated underwriting subsidiary, either to assist in the marketing of the securities or to prevent the customers of the underwriting subsidiary from incurring losses on securities sold by the subsidiary. In order to assure that this conflict does not arise, the Board believes that neither Applicants nor any of their subsidiaries may make loans to issuers of ineligible securities underwritten by the underwriting subsidiaries for the purpose of the payment of principal and interest on such securities. To assure compliance with the foregoing limitation, any lines of credit extended by any lending subsidiary of Applicants to an issuer of ineligible securities underwritten by the underwriting subsidiaries must be for a documented special purpose, or have substantial participation by other lenders, and have substantially different timing, terms, conditions, and maturities from the ineligible securities being underwritten.

Applicants must adopt appropriate procedures, including maintenance of necessary documentary records, to assure that any extensions of credit by Applicants or any of their subsidiaries to the issuer of ineligible securities underwritten or dealt in by the underwriting subsidiary are on an arm's length basis for purposes other than the payment of principal or

<sup>84.</sup> See Federal Reserve Board Staff Study, Commercial Bank Private Placement Activities 64-65 (1977); U.S. Department of the Treasury, Public Policy Aspects of Bank Securities Activities 34 (1975); S. Rep. No. 560, 98th Cong., 2d Sess. 15-16 (1984); Moratorium Legislation and Financial Institutions Deregulation: Hearings Before the Senate Comm. on Banking, Housing and Urban Affairs, 98th Cong., 1st Sess. 192 (1983) (statement of Paul A. Volcker, Chairman, Board of Governors of the Federal Reserve System).

<sup>85.</sup> S. Rep. No. 560, 98th Cong., 2d Sess. 15 (1984).

<sup>86.</sup> See Hearings on S. 2181, at 1612 (statement of Paul A. Volcker, Chairman, Board of Governors of the Federal Reserve System).

<sup>87.</sup> This limitation extends to credit to all customers of the lending affiliates, including brokers, dealers, and unaffiliated banks, but does not include lending to a broker-dealer for the purchase of securities where an affiliated bank is the clearing bank for such broker-dealer.

interest on ineligible securities underwritten or dealt in by the securities subsidiaries. An extension of credit is considered to be on an arm's length basis if the terms and conditions are substantially the same as those prevailing at the time for comparable transactions with issuers whose securities are not underwritten or dealt in by the underwriting subsidiaries.

In addition, the Board also believes that, to the extent the creditworthiness of securities sold by the underwriting subsidiaries depends on the existence of explicit financial backing of the issuer, that backing should be supplied by lenders unaffiliated with Applicants. Thus, the Board believes it appropriate to require that neither Applicants nor any of their subsidiaries issue or enter into a stand-by letter of credit, asset purchase agreement, indemnity, insurance, or other facility that might be viewed as enhancing the creditworthiness or marketability of ineligible securities underwritten, placed or dealt in by the underwriting subsidiaries. This limitation will further assure that the proposed activities do not encourage less than sound credit practices. For example, without such a prohibition, an affiliated bank might be tempted to provide a letter of credit to support a commercial paper issue that would otherwise not be of prime quality in an effort to make the issue marketable.

The Board believes that the above requirements relating to credit extensions to issuers should also apply to extensions of credit to parties that will be major users of the projects that are financed by industrial revenue bonds underwritten by the underwriting subsidiary. This restriction will avoid the potential conflict that a bank may be tempted to make imprudent loans to those who will benefit from a particular industrial revenue bond project in order to ensure the success of the project being financed.

Applicants generally oppose any broad restriction on the provision of credit support by affiliated banks to issuers whose securities are sold by the underwriting subsidiaries. Applicants contend that banks currently provide letters of credit and similar facilities to issuers of municipal securities underwritten by the bank. Applicants also argue that economic reality would deter preferential lending in support of an underwriting subsidiary's activity because the potential exposure to the bank on an unsound loan would be greater than the underwriting and trading profits to be gained by the subsidiary.

However, the Board believes that the risk that a bank's credit judgment may be impaired by the existence of an investment banking relationship between a borrower and the bank's affiliate is one of the fundamental hazards at which the Glass-Steagall Act was aimed and is a significant consideration under the standards of section 4(c)(8) of the BHC Act, which are

designed to maintain impartiality in the credit-granting process and thereby promote public confidence in banking organizations. A similar restriction was relied on by the Board in the *Bankers Trust* and *Chase* decisions.

Credit and Advances to Underwriting Subsidiaries. The protestants also assert that Applicants' subsidiary banks may be tempted to make imprudent extensions of credit or other investments to support the underwriting subsidiaries if they encounter financial difficulties. This conflict is inherent in transactions between banks and their affiliates generally and is addressed by section 23A of the Federal Reserve Act. (12 U.S.C. § 371c(c)(1)). That provision limits extensions of credit by a bank to its nonbank affiliates, as well as asset purchases from an affiliate, to 10 percent of the bank's capital and requires that any extensions of credit be collateralized (e.g., 110 percent of the extension of credit if the collateral is composed of revenue bonds). Section 23A also prohibits a bank from purchasing low quality assets or accepting them as collateral. Section 23A thus imposes limits on the techniques that might be used to transfer funds of an affiliated bank to an underwriting subsidiary. Applicants have also agreed to comply with certain of the limits contained in the proposed section 23B of the Federal Reserve Act.88 These limitations require that all purchases and sales of assets between a bank affiliate of Applicants and the underwriting subsidiaries, including transactions with third parties if the underwriting subsidiaries are a participant or have a financial interest in the third party or act as agent or broker or receive a fee for their services, be at arm's length and on terms no less stringent than those applicable to unrelated third parties.89

An additional potential conflict that might occur is the possibility that Applicants' subsidiary banks might make unwarranted purchases of securities underwritten or dealt in by the underwriting subsidiaries in order to assist the subsidiaries' marketing efforts or to prevent losses by the subsidiaries. The possibility that such securities might be dumped into the bank's inventory was a major concern underlying the Glass-Steagall Act. That such transactions represent a potential adverse effect is also evidenced by the fact that

<sup>88.</sup> See S. 790, 100th Cong., 1st Sess. § 102(a) (1987), 133 Cong. Rec. S 4061, S 4063 (March 27, 1987).

<sup>89.</sup> In particular, the transactions must be on terms and under circumstances, including credit standards, that are substantially the same, or at least as favorable to such bank or its subsidiary, as those prevailing at the time for comparable transactions with or involving other nonaffiliated companies or, in the absence of comparable transactions, those terms and circumstances that in good faith would be offered to, or would apply to, nonaffiliated companies.

legislation recently considered by Congress contained a provision (the proposed new section 23B of the Federal Reserve Act) expressly dealing with this possibility in connection with eligible underwriting conducted directly by banks. Applicants maintain that the possibility of this adverse effect is mitigated on the basis that the securities being underwritten by the underwriting subsidiaries are eligible investments for banks and by existing regulatory requirements. Applicants point in particular to rules of the NASD, which prohibit a member engaged in a fixed price offering of securities (other than U.S. government or municipal securities) from selling such securities or placing them with an affiliate during the course of the underwriting.90

While the underwriting subsidiaries would be NASD members and subject to this rule against sales to affiliates, the rule does not apply to the offering of municipal securities, which is likely to be an important part of the subsidiaries' ineligible operations, and does not appear to address possible sales of unsold securities to an affiliate at the termination of the underwriting syndicate. In addition, although the limitations in section 23A would also be applicable in this situation, section 23A does not reach all inter-affiliate transactions.<sup>91</sup>

Accordingly, the Board believes that, in view of the significance of this concern, and a record indicating a basis for the Board's concern in these cases, Applicants and their subsidiaries (other than the underwriting subsidiaries) should not purchase, as principal, ineligible securities underwritten by the underwriting subsidiary during the underwriting period and for 60 days after termination of the underwriting and should not purchase from the underwriting subsidiary any ineligible security in which the underwriting subsidiary makes a market. The Board believes this requirement is essential to address the potential for conflicts of interest that could have a detrimental impact on the financial resources of the affiliates of the underwriting subsidiaries.

Biased Investment Advice. Protestants also raise concerns relating to whether the proposals will impair Applicants' obligation to provide unbiased investment advice to trust department customers. <sup>92</sup> Applicants object to a proposed condition that would address this

Applicants note that banks and broker-dealers are already subject to extensive restrictions against selfdealing under the securities laws and banking regulation as well as under common law fiduciary requirements and that an absolute prohibition is unnecessary given these restrictions and may not in fact be in the best interests of the bank's customers. In accordance with these standards, a bank or other investment adviser must disclose to an advisory customer any interest of its affiliate as underwriter or market maker in the securities being purchased or recommended and may not purchase such securities for a customer unless the purchases are specifically authorized under the instrument creating the fiduciary relationship, by court order, or by the law of the jurisdiction under which the trust is administered. For example, OCC Trust Banking Circular 19 generally prohibits national banks from purchasing in a fiduciary capacity securities underwritten by a commercial department of the bank either individually or as a syndicate member during the period of any underwriting or selling syndicate and creates a presumption that such purchases made for a period of 60 days after termination of the syndicate are also unlawful, except where authorized under the provisions of the governing trust instrument as noted above.

In addition, under fiduciary principles, affiliated banks may not express opinions about the advisability of investing in ineligible securities underwritten by the bank or its affiliates without disclosure. This limitation, which the Board believes should be explicitly applied to the underwriting subsidiaries, will assure that less than objective advice will not be provided by Applicants.<sup>93</sup> Moreover, each Applicant has committed that any dealings with the underwriting subsidiaries (or a company in which the subsidiary has an interest or for which it is acting as agent or underwriter) will be conducted on an arm's length basis and will not involve preferential terms or conditions. As discussed above, each Applicant will also provide cus-

concern by precluding Applicants and their subsidiaries from purchasing as trustee or in any other fiduciary capacity ineligible securities underwritten or dealt in by their underwriting subsidiaries or from recommending to their customers the purchase of such securities.

<sup>90.</sup> Article II, § 1(m); Article III, § 36, NASD Rules of Fair Practice, NASD Manual (March 1985), ¶ 201-2196.

<sup>91.</sup> Under section 23A, a bank affiliate could invest up to 10 percent of its capital in securities underwritten by an affiliate. In addition, section 23A does not apply in the case of assets having a readily identifiable and publicly available market quotation. Finally, section 23A does not apply to purchases by the parent holding company or other nonbank affiliates of securities underwritten by the underwriting subsidiary.

<sup>92.</sup> See Bankers Trust I, 468 U.S. at 146-147; ICI I, 401 U.S. at 633.

<sup>93.</sup> Protestants have also raised the possibility that Applicants might not provide impartial advice to customers about the best method of obtaining funds or might not provide sound investment advice to correspondent banks. Under the terms of the Board's approval, the underwriting subsidiaries here would be insulated from the lending and other departments of affiliated banks and, to a large extent, the issuers of the ineligible securities that will be sold by the underwriting subsidiaries are financially sophisticated and are able to make their own assessment about various financing methods. Likewise, correspondent banks have significant expertise in investing in municipal and mortgage-related securities and have traditionally purchased commercial paper for their own account.

tomers with a specific disclosure statement describing the difference between affiliated banks and the underwriting subsidiary. The Board believes these disclosure and fiduciary requirements, if followed by the bank holding company and its bank, thrift, investment adviser and trust company subsidiaries, are sufficient to address concerns regarding conflicts of interest involving bank affiliates acting in a fiduciary capacity.

Securities Issued by Affiliates. An additional concern has been raised regarding the potential conflicts that might arise if an underwriting subsidiary underwrites or deals in securities of affiliated entities, particularly those that may be experiencing financial difficulties.

In the Board's view, the incentives for a conflict of interest to arise in underwriting and dealing in an affiliate's securities could be substantial, depending on factors such as the extent, regularity, or purpose of such underwriting and dealing. The Board notes that Congressional concern over bank securities affiliates' underwriting and making markets in the securities issued by their bank affiliates was cited as one of the principal reasons for the Glass-Steagall Act. *ICI II*, 450 U.S. at 61-62. Specifically, where the underwriting subsidiary offers securities representing interests in pools of assets created by its affiliates, the temptation exists that the affiliates' least creditworthy assets would be securitized.

Applicants maintain that investment banking firms that are part of an integrated holding company organization are subject to the same conflict in selling their affiliates' securities and that this conflict has been addressed by the disclosure requirements under the securities laws and by NASD rules. The Board is unable to conclude on the basis of the record of these applications, however, that these requirements alone would be adequate. First, the fact that investment banking firms that are not affiliated with banks face this kind of conflict in underwriting affiliates' obligations is not probative here. These firms are not subject to the public benefits test in section 4(c)(8), which imposes an affirmative duty on the Board to consider potential conflicts of interest associated with bank holding companies' nonbanking activities.

Second, the Board's concern in this case is not limited to the protection of investors. The reputation of affiliated banks could be damaged if the underwriting subsidiary sells securities issued by its affiliates to the public and those securities subsequently deteriorate in quality. Nor is it clear that disclosure requirements alone would be adequate, since the underwriting subsidiary may have an incentive to be less objective in evaluating creditworthiness and in describing all material facts when the subsidiary seeks to market obligations of entities under common control

with it. The requirement of an unaffiliated underwriter will tend to ensure that an independent and impartial credit judgment will be made in connection with securities issued by a banking organization.

On the basis of the foregoing, the Board requires, as a condition to its Order in order to avoid this potential conflict, that an underwriting subsidiary may not underwrite or deal in any ineligible securities issued by its affiliates or representing interests in, or secured by, obligations originated or sponsored by its affiliates (except for grantor trusts or special purpose corporations created to facilitate underwriting of securities backed by residential mortgages originated by a non-affiliated lender).

Securities to Repay Loans. The final category of potential conflicts of interest cited by protestants involves possible harm to the interests of those who purchase securities sold by the underwriting subsidiaries. Protestants contend that Applicants might encourage issuers to issue securities, the proceeds of which will be used to repay loans made by affiliated banks.

The Board believes that incentives to convert a risky loan held by an affiliate to a security sold to the public by the underwriting subsidiary are minimized by the condition in this Order that precludes underwriting or dealing in ineligible securities issued by affiliates, and by the economic disincentive for a bank holding company to jeopardize the reputation of its underwriting subsidiary as well as of its bank and other lending subsidiaries by engaging in underwriting for this purpose. The Board further believes that this abuse is made unlikely by the requirements, explained earlier in this Order, that the underwriting subsidiary should disclose to purchasers any material lending relationship between the issuer and a bank or lending affiliate of the underwriting subsidiary as required under the securities laws and in every case whether the proceeds of the issue will be used to repay outstanding indebtedness to affiliates.

Finally, the Board also notes that the ineligible securities underwritten and dealt in by the underwriting subsidiaries will be rated by independent rating services. The necessity for objective credit ratings makes it extremely difficult for issuers experiencing financial difficulties to issue securities that will be accepted by the market. Accordingly, subject to the foregoing limitations, the Board believes that the proposal does not pose conflicts of interest sufficient to outweigh the public benefits of the proposal.

Unfair Competition. The Board has also considered protestants' contention that the proposed underwriting affiliates would have unfair competitive advantages over other underwriters and dealers that are not affiliated with banks. Protestants allege that Applicants would enjoy unfair advantages in, for example, the

rates they would pay for funding; access to the credit files of banking affiliates to obtain information useful in marketing their services to issuers; and tax advantages available only to banks that hold municipal securities. The Board finds that this limited proposal would not result in unfair competition for the following reasons.

Access to Low-Cost Funds. With respect to protestants' funding claim, there is no evidence that Applicants' underwriting subsidiaries would, by reason of their affiliation with federally insured banks, enjoy access to lower cost funds than their competitors that are not affiliated with banks.94 Funding for the underwriting subsidiaries would be provided by their parent holding companies, which are not banks. A corporation's funding costs are a function of a variety of economic factors, including size, capital and earnings. While the regulatory framework under which a corporation operates is a factor that may affect cost of funds, the same bank regulatory structure that provides deposit insurance imposes restraints and important costs on the operation of banks and their affiliates that are not imposed on other corporations. In addition, rates paid by Applicants and other bank holding companies on their commercial paper have generally been the same as those paid by corporations of similar size and credit ratings.

As noted above, the underwriting subsidiaries would be corporations legally separate and apart from Applicants' banking affiliates. Accordingly, the underwriting subsidiaries would not obtain funding directly through federally insured deposits or the Federal Reserve's discount window, which is available to depository institutions. Moreover, the Board does not believe that there would be a strong likelihood that insured deposits or the proceeds of discount window loans could be transferred from affiliated banks to the underwriting subsidiaries, in view of the lending limitations and collateral requirements of section 23A of the Federal Reserve Act, and the fact that any other inter-affiliate transactions not subject to section 23A must be conducted on an arm's length basis.

In any event, as the Board noted in *BankAmerical Schwab*, the legislative history of section 4(c)(8) of the Act indicates that the term "unfair competition" was intended to refer to unfair or unethical business conduct under the law, and not to disparities established by existing federal regulation of providers of financial services. 95 Accordingly, for the reasons set out in *BankAmericalSchwab*, even if the underwriting sub-

sidiaries might obtain some funding advantage by reason of their affiliation with Applicants, the Board finds that such advantage is not unfair competition within the meaning of section 4(c)(8) of the Act.

Access to Confidential Information. The Board has also considered the allegation that unfair competition would result from sharing of confidential information between the underwriting subsidiaries and their affiliates, such as granting the underwriting subsidiaries access to the credit files of their affiliates to determine the financial needs of issuers and potential issuers to enable the subsidiaries to offer their services to issuers in advance of competitors.

To address the possibility of potential unfair competition or conflicts arising as a result of information sharing, Applicants state that they will voluntarily establish appropriate "Chinese walls" to prevent information acquired by the organization in one capacity from being improperly used in another area.

However, the Board does not believe that these commitments are sufficiently strong to assure that this conflict will not occur. Accordingly, as a condition of the Board's approval of these applications, no lending affiliate of the underwriting subsidiaries may disclose to the underwriting subsidiaries any nonpublic customer information consisting of an evaluation of the creditworthiness of an issuer or other customer of the underwriting subsidiary, other than as required by securities laws.

With respect to the potential for adverse effects from the disclosure of confidential information held by an underwriting subsidiary to its affiliates, the Board notes that trading on inside information about issuers would violate the federal securities laws. Moreover, the incentive to gain access to confidential information possessed by the underwriting subsidiary is reduced by the prohibition discussed above on the purchase by any affiliate as principal or trustee from the underwriting subsidiary of securities distributed by the subsidiary. Nevertheless, the Board believes it appropriate to require that the officers or employees of an underwriting subsidiary may not disclose nonpublic customer information consisting of an evaluation of the creditworthiness of an issuer or other customer of the underwriting subsidiary to its affiliates.%

Tax Treatment. Finally, the Board has considered protestants' argument that Applicants' subsidiary banks receive different tax treatment than general corporations with regard to interest expense for carrying municipal securities. However, the Board finds that banks' differing tax treatment does not constitute

<sup>94.</sup> The Board notes that banks do not dominate the markets for bank-eligible securities, suggesting that the alleged funding advantages for banks are not a significant competitive factor.

<sup>95. 69</sup> FEDERAL RESERVE BULLETIN 105, 111 (1983), affirmed by the Supreme Court in Schwab.

<sup>96.</sup> The Board notes that explicit tying of services offered by Applicants' subsidiary banks and by the underwriting subsidiaries is prohibited by section 106 of the Bank Holding Company Act Amendments of 1970. 12 U.S.C. §§ 1972–78.

an unfair competitive practice. First, the Tax Reform Act of 1986 has significantly reduced the tax advantages available to banks with respect to interest expense for municipal securities. The underwriting subsidiaries are not banks and would not have the benefit of tax provisions applicable to banks. In addition, under this Order the underwriting subsidiaries may not sell ineligible municipal securities to affiliates during the underwriting period and there is no evidence that Applicants intend to engage in transactions to place the underwriting subsidiaries' eligible municipal securities temporarily with affiliated banks to obtain any tax advantage.

In any event, banks' tax treatment, like their coverage by deposit insurance, is a result of federal regulation, rather than of unethical or unfair business practice. As the Board specifically noted in *BankAmerical Schwab*, any competitive advantage accruing from the favorable tax treatment accorded bank municipal securities dealers does not represent the type of adverse effect about which the Act was concerned.<sup>99</sup>

Undue Concentration of Resources or Decreased Competition. The Board has carefully considered the possibility that these proposals would result in an undue concentration of resources, in view of the size of Applicants and the concern expressed in the BHC Act regarding the concentration of control over credit resources.100 The Board has also considered the contentions of protestant Salomon Brothers and others that the existence of severe limitations on banking institutions' securities activities prevents a concentration of resources and promotes competitive innovation between banking institutions and investment banking firms. The Board finds that these proposals are not likely to lead to undue concentration of resources or decreased competition under the facts and circumstances of and subject to the limitations imposed on the activities herein.

Applicants seek an expansion of authority to underwrite and deal in limited kinds of securities on a *de novo* basis and these proposals do not involve any combination of existing competitors. Thus, the proposals would not eliminate any existing provider of the services involved, but would add the underwriting subsidiaries as new competitors. Addition of new competitors may reasonably be expected to increase competition and promote deconcentration in the un-

derwriting market for the types of ineligible securities proposed. The likelihood that these proposals would result in concentrations of resources is further reduced by the fact that in order to comply with the restrictions of section 20, the volume of ineligible revenue bonds and ineligible mortgage-backed securities underwritten by the underwriting subsidiaries in any one year will not exceed 5 percent of the total amount of each such kind of security underwritten domestically by all firms during the previous calendar year. Similarly, the volume of such ineligible securities held by the underwriting subsidiaries as a result of their secondary market activity may not exceed 5 percent of the total amount of that type of security underwritten domestically by all firms during the previous calendar year. Similar market limits apply to commercial paper activ-

Finally, the Board notes that, as authorized by section 16 of the Glass-Steagall Act, banks underwrite and deal in eligible securities without any market size limitation, and this authority has not led to adverse effects with respect to concentration of resources. In fact, the markets for bank eligible securities are markedly less concentrated that those for ineligible securities.

Financial Factors. In evaluating these applications, the Board has carefully considered the financial resources of each Applicant, including its capital position, and the effect on these resources of the proposed activities. The Board has also considered the comments of the SIA and several other protestants that, after the initial capitalization of the underwriting subsidiaries, Applicants should be precluded from providing any additional capital support to the subsidiaries.

The Board has indicated on previous occasions that a bank holding company should be a source of financial strength to its subsidiaries, in particular to its banking subsidiaries, and that the Board will evaluate an application for expanding nonbanking activity with this consideration in mind. The Board has required holding companies seeking approval for new activities to have the financial resources to capitalize the nonbanking entity in accordance with industry standards generally and the risk factors involved in the activity in particular, with the aims of assuring, to the extent feasible, that the new activity can support itself on a stand-alone basis, while at the same time maintaining the bank holding company's ability to serve as a source of financial strength to its subsidiary banks. 101

<sup>97.</sup> Pub. L. No. 99-514, § 902 (Oct. 22, 1986).

<sup>98.</sup> The possibility of such tandem operations occurring is also minimized by the fact that there will be no interlocking directors, management or employees among the underwriting subsidiaries and bank or thrift affiliates.

<sup>99. 69</sup> FEDERAL RESERVE BULLETIN at 111.

<sup>100.</sup> See H.R. Conf. Rep. No. 1747, 91st Cong., 2d Sess. 17 (1970) (Statement of the Managers on the Part of the House).

<sup>101.</sup> See Statement of Paul A. Volcker, Chairman, Board of Governors of the Federal Reserve System, Before the Subcomm. on Commerce and Monetary Affairs of the Comm. on Government Operations, U.S. House of Representatives (June 11, 1986), reprinted in 72 Federal Reserve Bulletin 541, 545 (1986); State Bond and Mortgage Company, 71 Federal Reserve Bulletin 722 (1985).

In these cases, the Board believes it is appropriate to exclude the capital (and related assets) of the underwriting subsidiaries from the consolidated capital that Applicants are required to maintain under the Board's Capital Adequacy Guidelines. In the Board's view, this exclusion of the capital of the underwriting subsidiaries is consistent with the preservation of the bank holding company's resources for subsidiary banks, and, in the Board's view, a general prohibition against additional funding of the underwriting subsidiary by the parent holding company is unnecessary, provided that in each specific case the provision of funds to the subsidiary is not detrimental to subsidiary hanks

The Board further notes that the underwriting subsidiaries will be subject to a separate regulatory capital requirement—the SEC's net capital rule. Accordingly, the Board finds the proposed capitalization of each of the underwriting subsidiaries in these cases will be adequate under the generally accepted norms for companies engaged in similar activities. The Board will monitor the development and risk profiles of the underwriting subsidiaries in order to determine if their capital is adequate.

#### C. Pending Legislation.

In its consideration of this case, the Board has noted that on March 27, 1987, the United States Senate passed legislation that, if enacted, would prohibit Board approval between March 6, 1987 and March 1, 1988, of any application, such as the present proposals, that would permit a bank holding company to engage in the underwriting or public sale of securities on the basis that it was not "engaged principally" in such activity within the meaning of section 20 of the Glass-Steagall Act. 102 This prohibition would not apply to applications pending prior to the date of enactment of the legislation if the Board delays the effective date of the decision until the expiration of the moratorium.

This moratorium legislation, however, has not yet been enacted into law. Accordingly, and as the Board stated in the *Chase* decision, the Board is required as provided in existing law to act on these applications within mandated time periods and in accordance with the applications processing schedule prescribed by Regulation Y. Moreover, the applications, as noted, comply with existing law under the framework established by the Board in this Order.

While the Board believes it must proceed to reach a decision on the applications, the Board calls to Applicants' attention that they may be required by subsequent Congressional action to cease their ineligible underwriting and dealing activities approved in this Order. The Board retains jurisdiction over the applications to act to carry out the requirements of any legislation adopted by Congress that would affect Applicants' conduct of underwriting and dealing activities under this Order and the Bank Holding Company Act.

#### Conclusion

In sum, the Board finds that these proposals, as limited by this Order, are consistent with section 20 of the Glass-Steagall Act and may reasonably be expected to result in public benefits that outweigh possible adverse effects. Accordingly, the Board finds that Applicants may conduct the proposed activities to the extent and in the manner described in this Order consistent with section 20 of the Glass-Steagall Act and section 4(c)(8) of the BHC Act. The Board's approval of these applications extends only to the activities conducted within the limitations of this Order as summarized below (and subject to the gross revenue and market share limitations discussed above), and underwriting or dealing in ineligible securities in any manner other than as described below and in this Order<sup>103</sup> is not within the scope of the Board's approval and is not authorized for the underwriting subsidiaries:

#### A. Types of Securities to be Underwritten

- 1. The underwriting subsidiaries shall limit their underwriting and dealing in ineligible securities to the following:
  - a. Municipal revenue bonds that are rated as investment quality (i.e., in one of the top four categories) by a nationally recognized rating agency, except that industrial development bonds in these categories shall be limited to "public ownership" industrial development bonds (i.e., those tax exempt bonds where the issuer, or the governmental unit on behalf of which the bonds are issued, is the sole owner, for federal income tax purposes, of the financed facility (such as airports and mass commuting facilities)).
  - b. Mortgage-related securities (obligations secured by or representing an interest in 1-4 family residential real estate), rated as investment quality (i.e., in

<sup>102.</sup> Competitive Equality Banking Act of 1987 (S. 790), 100th Cong., 1st Sess. § 201; 133 Cong. Rec. S 4061, S 4067 (March 27, 1987).

<sup>103.</sup> The underwriting subsidiaries may also provide services that are necessary incidents to these approved activities. The incidental services should be taken into account in computing the gross revenue and market share limits on the underwriting subsidiaries' ineligible underwriting and dealing activities, to the extent such limits apply to particular incidental activities.

one of the top 4 categories) by a nationally recognized rating agency.

c. Commercial Paper that is exempt from the registration and prospectus requirements of the S.E.C. pursuant to the Securities Act of 1933 and that is short term, of prime quality, and issued in denominations no smaller than \$100,000.

#### B. Capital Investment

2. Each Applicant's investment in an underwriting subsidiary and the assets of the underwriting subsidiary shall be excluded in determining the holding company's consolidated primary capital under the Board's Capital Adequacy Guidelines.

## C. Capital Adequacy

- 3. The underwriting subsidiary shall maintain at all times capital adequate to support its activity and cover reasonably expected expenses and losses in accordance with industry norms.
- 4. Applicants shall submit quarterly to the Federal Reserve Bank of New York FOCUS reports filed with the NASD or other self-regulatory organizations, and detailed information breaking down the underwriting subsidiaries' business with respect to eligible and ineligible securities, in order to permit monitoring of the underwriting subsidiaries' compliance with the provisions of this Order.

## D. Credit Extensions by Lending Affiliates to Customers of the Underwriting Subsidiary

- 5. No Applicant or subsidiary shall extend credit, issue or enter into a stand-by letter of credit, asset purchase agreement, indemnity, insurance or other facility that might be viewed as enhancing the creditworthiness or marketability of an ineligible securities issue underwritten by an affiliated underwriting subsidiary.
- 6. No lending affiliate of an underwriting subsidiary shall knowingly extend credit to a customer secured by, or for the purpose of purchasing, any ineligible security that an affiliated underwriting subsidiary underwrites during the period of the underwriting, or to purchase from the underwriting subsidiary any ineligible security in which the underwriting subsidiary makes a market. This limitation extends to all customers of lending affiliates, including brokers-dealers, and unaffiliated banks, but does not include lending to a broker-dealer for the purchase of securities where an affiliated bank is the clearing bank for such broker-dealer.
- 7. No Applicant or any of its subsidiaries may make loans to issuers of ineligible securities underwritten by

- an affiliated underwriting subsidiary for the purpose of the payment of principal and interest on such securities. To assure compliance with the foregoing, any credit lines extended to an issuer by any lending subsidiary of the bank holding company shall provide for substantially different timing, terms, conditions and maturities from the ineligible securities being underwritten. It would be clear, for example, that a credit has substantially different terms and timing if it is for a documented special purpose (other than the payment of principal and interest) or there is substantial participation by other lenders.
- 8. Each Applicant shall adopt appropriate procedures, including maintenance of necessary documentary records, to assure that any extensions of credit to issuers of ineligible securities underwritten or dealt in by an underwriting subsidiary are on an arm's length basis for purposes other than payment of principal and interest on the issuer's ineligible securities being underwritten or dealt in by the subsidiary. An extension of credit is considered to be on an arm's length basis if the terms and conditions are substantially the same as those prevailing at the time for comparable transactions with issuers whose securities are not underwritten or dealt in by the underwriting subsidiaries.
- 9. The requirements relating to credit extensions to issuers noted in paragraphs 5-8 above shall also apply to extensions of credit to parties that are major users of projects that are financed by industrial revenue bonds.

## E. Limitations to Maintain Separateness of an Underwriting Affiliate's Activity

10. There will be no officer, director, or employee interlocks between an underwriting subsidiary and any of the holding company's bank or thrift subsidiaries. The underwriting subsidiary will have separate offices from any affiliated bank.

## F. Disclosure by the Underwriting Subsidiary

11. An underwriting subsidiary will provide each of its customers with a special disclosure statement describing the difference between the underwriting subsidiary and its banking affiliates and pointing out an affiliated bank could be a lender to an issuer and referring the customer to the disclosure documents for details. The statement shall also indicate that the obligations of the underwriting subsidiary are not those of any affiliated bank and that the bank is not responsible for securities sold by the underwriting subsidiary. The underwriting subsidiary should disclose any material lending relationship between the issuer and a bank or lending affiliate of the underwriting subsidiary as required

under the securities laws and in every case whether the proceeds of the issue will be used to repay outstanding indebtedness to affiliates.

- 12. No underwriting subsidiary nor any affiliated bank or thrift institution will engage in advertising or enter into an agreement stating or suggesting that an affiliated bank is responsible in any way for the underwriting subsidiary's obligations.
- 13. No bank or thrift affiliate of the underwriting subsidiary will act as agent for, or engage in marketing activities on behalf of, the underwriting subsidiaries. In this regard, prospectuses and sales literature of an underwriting subsidiary may not be distributed by a bank or thrift affiliate; nor should any such literature be made available to the public at any offices of any such affiliate, unless specifically requested by a customer.

## G. Investment Advice by Bank/Thrift Affiliates

14. An affiliated bank or thrift institution may not express an opinion with respect to the advisability of the purchase of ineligible securities underwritten or dealt in by an underwriting subsidiary unless the bank or thrift affiliate notifies the customer that its affiliated underwriting subsidiary is underwriting or making a market in the security.

#### H. Conflicts of Interest

- 15. No Applicant nor any of its subsidiaries, other than the underwriting subsidiary, shall purchase, as principal, ineligible securities that are underwritten by the underwriting subsidiary during the period of the underwriting and for 60 days after the close of the underwriting period, or shall purchase from the underwriting subsidiary any ineligible security in which the underwriting subsidiary makes a market.
- 16. No Applicant nor any of its bank, thrift, or trust or investment advisory company subsidiaries shall purchase, as a trustee or in any other fiduciary capacity, for accounts over which they have investment discretion ineligible securities
  - (i) underwritten by the underwriting subsidiary as lead underwriter or syndicate member during the period of any underwriting or selling syndicate, and for a period of 60 days after the termination thereof, and
  - (ii) from the underwriting subsidiary if it makes a market in that security, unless, in either case, such purchase is specifically authorized under the instrument creating the fiduciary relationship, by court order, or by the law of the jurisdiction under which the trust is administered.

- 17. An underwriting subsidiary may not underwrite or deal in any ineligible securities issued by its affiliates or representing interests in, or secured by, obligations originated or sponsored by its affiliate (except for grantor trusts or special purpose corporations created to facilitate underwriting of securities backed by residential mortgages originated by a non-affiliated lender).
- 18. All purchases and sales of assets between bank (or thrift) affiliates and an underwriting subsidiary (or third parties in which the underwriting subsidiary is a participant or has a financial interest or acts as agent or broker or receives a fee for its services) will be at arm's length and on terms no less stringent than those applicable to unrelated third parties, and will not involve low-quality securities, as defined in section 23A of the Federal Reserve Act.

## I. Limitations to Address Possible Unfair Competition

19. No lending affiliate of an underwriting subsidiary may disclose to the underwriting subsidiary any nonpublic customer information consisting of an evaluation of the creditworthiness of an issuer or other customer of the underwriting subsidiary (other than as required by securities laws and with the issuer's consent) and no officers or employees of the underwriting subsidiary may disclose such information to its affiliates.

## J. Formation of Subsidiaries of an Underwriting Subsidiary to Engage in Underwriting and Dealing

20. Pursuant to Regulation Y, no corporate reorganization of an underwriting subsidiary, such as the establishment of subsidiaries of the underwriting subsidiary to conduct the activities, may be consummated without prior Board approval.

Because these proposals represent the first major entry of banking organizations into the field of underwriting and dealing in ineligible securities, the Board believes it appropriate to proceed cautiously and has established an extensive framework of prudential limitations to address conflicts of interest, unsound banking practices, and other adverse effects. After the underwriting subsidiaries have established a record of experience in the proposed activities, the Board may review the continued appropriateness of particular limitations. Similarly, the Board may from time to time, based upon experience with the activities, establish additional limitations on the conduct of the activities to ensure that the subsidiary's activities are consistent with safety and soundness, conflict of interest,

and other considerations relevant under the BHC Act.

Based on the foregoing and other considerations reflected in the record, and as set forth in the Appendix, the Board finds that these proposals, as limited in this Order are consistent with section 4(c)(8) of the Bank Holding Company Act and section 20 of the Glass-Steagall Act, and may reasonably be expected to result in public benefits that outweigh possible adverse effects. <sup>104</sup> Accordingly, the Board finds that Citicorp, J.P. Morgan and Bankers Trust may conduct the proposed activities to the extent and in the manner described in this Order and Appendix consistent with section 4(c)(8) of the BHC Act.

The Board's determination is subject to all of the conditions set forth in the Board's Regulation Y, including those in sections 225.4(d) and 225.23(b), and to the Board's authority to require modification or termination of the activities of the holding companies or any of their subsidiaries as the Board finds necessary to ensure that the underwriting subsidiaries' activities are consistent with safety and soundness and conflict of interest considerations and to assure compliance with the provisions of the BHC Act and the Board's regulations and orders issued thereunder, or to prevent evasion thereof.

These transactions shall not be consummated later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of New York, pursuant to delegated authority.

By order of the Board of Governors, effective April 30, 1987.

Voting for these actions: Governors Johnson, Seger, and Heller. Voting against these actions: Chairman Volcker and Governor Angell.

[SEAL]

WILLIAM W. WILES Secretary of the Board

104. The SIA has requested the Board to release data submitted by Applicants in connection with these proposals concerning the volume of sales and income derived from underwriting and dealing in eligible securities since 1982, and their projected volume and income to be derived from underwriting and dealing in ineligible securities. The Board has accorded this information confidential treatment since public disclosure of this data could significantly impair Applicants' competitive position. The SIA states that disclosure of the data is necessary to ascertain the extent to which Applicants' capital will be at risk as a result of the proposals. The Board notes, however, that the underwriting and dealing activities of the underwriting subsidiaries in ineligible securities may not exceed 5 percent of the total market in such securities. Since these market limitations determine the maximum scope of the proposed activities and since market data are publicly available, release of the confidential data submitted by Applicants does not appear necessary. The additional information requested by the SIA is publicly available and involves the kinds of transactions with affiliates that are not permitted under this Order.

In addition, the Board does not believe this information is necessary for resolution of the other issues raised by the SIA. With respect to

Dissenting Statement of Chairman Volcker and Governor Angell

We regret we are unable to join the majority in approving the pending applications.

The regret reflects the fact that, as a matter of policy, we support the idea that affiliates of bank holding companies underwrite and deal in commercial paper, municipal revenue bonds, and 1-4 family mortgage-related securities, the activities involved in the Board's decision. Moreover, we agree generally with the nature of the limitations placed upon the activities in the Board decision, assuming the threshold question of their legality in the particular form proposed can be answered affirmatively.

Our point of difference involves precisely that question of law. Section 20 of the Glass-Steagall Act provides that no member bank may be affiliated with any corporation engaged principally in the underwriting of stocks, bonds, debentures, notes or other securities. We believe the plain words of the statute, read together with earlier Supreme Court and circuit court opinions, as we understand them, indicate that government securities are indeed "securities" within the meaning of section 20. Consequently, it appears to us that the applications approved today, as a matter of law, involve affiliations of member banks with corporations that are in fact not only "principally engaged" in dealing and underwriting in securities, but in fact would be wholly engaged in such activities, thereby exceeding the authority of law.2

Our point is not merely one of legal formalisms. The interpretation adopted by the majority would appear to make feasible, as a matter of law if not Board policy, the affiliations of banks with some of the principal underwriting firms or investment houses of the country. Such a legal result, we feel, is inconsistent with the intent of Congress in passing the Glass-Steagall Act.

risk to Applicants' capital, the Board has required that Applicants may invest in the underwriting subsidiaries only to the extent that such funds would be in excess of the Board's capital requirements for bank holding companies and, as discussed above, the Board does not believe the potential for loss to Applicants or their other affiliates from the underwriting subsidiaries is substantial.

<sup>1.</sup> We have joined earlier decisions of the Board authorizing some of these activities in non-securities affiliates.

<sup>2.</sup> Without elaborating on the legal debate reviewed in the Board's order, we wish to reiterate that we fully support earlier Board decisions allowing the underwriting and dealing of government securities to take place in an affiliate. Our point of disagreement is whether that authority can, in effect, be used to bootstrap securities activities that Congress clearly wished to restrain or prohibit.

As the Board as a whole has repeatedly urged, the plain and desirable remedy to this legal and substantive morass is a fresh Congressional mandate. We urge the Congress to provide straightforwardly the authority for bank holding companies to conduct, with appropriate safeguards, the kinds of activities permitted by the Board in its decision, the practical import of which is confined to a relative handful of large bank holding companies with substantial government securities op-

#### Appendix B

The Board issues the following statement setting forth in more detail its findings and analysis underlying certain of the Board's conclusions in its Order of April 30, 1987, regarding the applications of Citicorp, J.P. Morgan & Co. Incorporated and Bankers Trust New York Corporation, to engage in limited underwriting and dealing in certain securities proposed in the applications through wholly owned subsidiaries. The Appendix will address the Board's conclusion that the term "public sale" contained in section 20 of the Glass-Steagall Act covers dealing in securities. Section 20 provides that no member of the Federal Reserve System shall be affiliated with any corporation engaged principally in the "issue, flotation, underwriting, public sale, or distribution" of securities. 12 U.S.C. § 377.

The Board concludes that the term "public sale," as used in section 20 of the Glass-Steagall Act, covers the proposed dealing activities. The Board believes this result is consistent with the terms of section 20, the legislative history, the rationale of the Supreme Court's decision in Securities Industry Association v. Board of Governors of the Federal Reserve System, 468 U.S. 207 (1984)("Schwab"), the Board's longheld view that dealing is covered by the term "public sale" in section 32 of the Glass-Steagall Act—a companion provision to section 20, and Congressional purposes underlying section 20.

In reaching this conclusion the Board has carefully considered the arguments of the Applicants, who contend that "dealing" is not covered by the terms "issue, flotation, underwriting, public sale, or distribution" as used in section 20. In support of this

contention, the arguments are advanced that the term "public sale" should be read to refer to underwriting or initial distribution activity because other terms used in section 20 refer to underwriting or initial distributions of securities, that the word "public" used in public sale carries the connotation of a distribution, and that the legislative history would support a distinction between dealing and distributing.

Literally, the term "public sale" in section 20 is broad enough to encompass dealing in securities. In common industry usage, a "dealer" in securities "holds himself out as one engaged in buying and selling securities at a regular place of business" and "sells securities to his customer which he has purchased or intends to purchase elsewhere or buys securities from his customer with a view to disposing of them elsewhere." Thus, a dealer, acting for his own account, maintains an inventory of particular issues of securities in the secondary market—frequently acting as a market maker in these securities.

The term "sale", used in a commercial context, has been interpreted as referring to transactions in which a seller acting as principal transfers title to a buyer.<sup>3</sup> In the Board's view, since a dealer holds himself out to the public as being willing to buy and sell securities for his own account, the dealer can reasonably be viewed as engaging in the "public sale" of particular securities.

The legislative history indicates that Congress intended dealing in securities to be covered by section 20, the provision designed to require member banks to divorce their securities affiliates. In its 1933 report following hearings on the Glass bill, the Senate Banking Committee stated that it proposed to separate member banks from affiliates that devoted themselves not only to underwriting but also to "stock speculation" and "maintaining a market for the banks' own stock." Senator Glass was particularly critical of bank affiliates that "dealt in the stocks of the parent bank." 75 Cong. Rec. 9887 (1932)(emphasis added). In describing the activity of a bank securities affiliate to

be divorced under the Act, Senator Walcott specifically noted that its business was to underwrite, purchase or sell various securities as they come along in the market.<sup>5</sup>

In Schwab, the Supreme Court interpreted the term "public sale" in section 20 as not applying to a discount broker that buys and sells securities solely upon the unsolicited order of customers and not for its own account (as contrasted with a securities dealer, which takes a position in securities). Among other things, the Court stated that "public sale" should be interpreted by reference to the activities described by the terms surrounding it in section 20—the "issue," "flotation," "underwriting," and "distribution" of securities.6

Reference to the other activities listed along with "public sale" in section 20, such as "underwriting," supports the Board's view that dealing activities are covered by that statute. As the Court in Schwab recognized, in the typical underwriting transaction the underwriter purchases securities from an issuer and resells them to the public and thus, like a dealer, normally acts as a principal in the transaction. Like an underwriter, a dealer in securities "buys and sells securities on its own account thereby assuming all risk of loss." Indeed, the Court in Schwab stated that section 20 would prohibit a bank affiliate from "dealing in" securities for its own account.9

The Board's view that dealing in securities is covered by the language in section 20 is further supported by the Board's longstanding and consistent interpretation that dealing is covered by the related language of section 32 of the Glass-Steagall Act (12 U.S.C. § 78). Section 32 prohibits interlocking officer, director or employee relationships between a member bank and any entity "primarily engaged" in the issue, flotation, underwriting, public sale or distribution of securities.

<sup>3.</sup> See Webster's Third New International Dictionary (1961); Black's Law Dictionary 1200 (5th ed. 1979); U.C.C. § 2-106 (1978); see also Gross v. Vogel, 81 A.D.2d 576, 437 N.Y.S. 2d 431 (1981), and E. F. Hutton v. Zaferson, 509 S.W. 2d 950, 952 (Texas 1974).

<sup>4.</sup> S. Rep. No. 77, 73d Cong., 1st Sess. 10 (1933). Members of Congress criticized the association of banks with the "speculative business of dealing in securities" (75 Cong. Rec. 9904 (1932) (statement of Sen. Walcott)) and banks' establishment of departments that not only began "to engage in the origination, underwriting, and distribution" of investment securities, but also "to trade in them" (75 Cong. Rec. 9911 (1932) (statement of Sen. Bulkley)).

<sup>5. 75</sup> Cong. Rec. 9905 (1932). See also 75 Cong. Rec. 9912 (1932) (statement of Sen. Bulkley) ("Obviously, the banker who has nothing to sell his depositors is much better qualified to advise disinterestedly" than is the banker who is to receive "an underwriting profit"... or a trading profit") (emphasis added).

<sup>6. 468</sup> U.S. at 218.

<sup>7.</sup> Id. at 217-18 & n.17.

<sup>8.</sup> Id. at 218 n.18.

<sup>9.</sup> Id. at 219 n.20. The Board notes that the heading given section 20 in its codification in Title 12 of the United States Code indicates that the statute applies to affiliation with "an organization dealing in securities." 12 U.S.C. § 377 (1934). The heading for section 20 in a compilation of national banking laws published under the direction of the Comptroller of the Currency shortly after section 20 was enacted was "Relationships between Member Banks and Securities Dealers." The National Bank Act as Amended and Other Laws Relating to National Banks (U.S. Government Printing Office, July 1, 1933).

508

For example, in 1934, the year that the Glass-Steagall Act became effective, the Board ruled that "it is the purpose of section 32 to restrict relationships between member banks and organizations which are directly interested in issues of securities through underwriting, distributing, or *dealing* in such issues." Similarly, in 1965, the Board stated that ". . . acting as a dealer, or generally speaking, selling or distributing securities as a principal, is covered by [the language of section 32]." In its *Schwab* decision, the Supreme Court expressly stated that, because sections 32 and 20 are complementary provisions of the Glass-Steagall Act, contain identical language and were enacted for similar purposes, long-accepted Board interpretations of section 32 "should apply as well to § 20." <sup>12</sup>

Finally, interpreting "public sale" to include securities dealing activities is consistent with the basic purposes of the Glass-Steagall Act. Since a dealer operates for its own account in particular securities, *i.e.*, with its own funds, the dealer is subject to the "inherent risks of the securities business" and to the "more subtle hazards" that arise when a banking organization has a pecuniary interess in the purchase and sale of particular securities. In Schwab, the Supreme Court stated that "[a]ll these 'subtle hazards' are attributable to the promotional pressures that arise from affiliation with entities that purchase and sell particular investments on their own account." 468 U.S. at 220 n.23.

The hazards and abuses presented by the business of trading in securities for one's own account are not limited to the distribution of securities but may also arise in the context of secondary market trading where the activities are conducted on a principal basis. <sup>14</sup> For example, a bank might be tempted to promote to its customers the sale of securities held in an affiliate's dealer inventory, particularly when the affiliate is a market maker in particular securities. There may also be the temptation for the bank to make loans to customers in order to facilitate the purchase of securities dealt in by an affiliate or to extend credit or other aid to the affiliate when it is faring badly due to losses from dealing operations.

Moreover, the fact that section 16 of the Glass-Steagall Act (12 U.S.C. § 24 Seventh) expressly prohibits banks from engaging in general securities dealing activities suggests that this function is the kind of activity Congress viewed as giving rise to unwarranted risks and hazards when conducted by a banking organization.

# United Community Financial Corporation Wayland, Michigan

Order Denying Acquisition of an Insurance Agency

United Community Financial Corporation, Wayland, Michigan, a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act") (12 U.S.C. § 1841 et seq.), has applied under section 4(c)(8) of the BHC Act (12 U.S.C. § 843(c)(8)) to acquire McIntyre & Associates Insurance ("Insurance Agency"), a general insurance agency with offices in the village of Clarksville, Ionia County, and in Georgetown Township, Ottawa County, Michigan.

Notice of the application, affording interested persons an opportunity to submit comments on the proposal, has been duly published (52 Federal Register 4190 (1987)). The time for filing comments has expired, and the Board has considered the application and all comments received, including those of various insurance trade associations, in light of the public interest factors set forth in section 4(c)(8) of the BHC Act.

Applicant proposes to engage in general insurance activities in a place of fewer than 5,000 residents, pursuant to exemption C of section 4(c)(8) of the BHC

<sup>10. 20</sup> FEDERAL RESERVE BULLETIN 393 (1934) (emphasis added). Accord, 20 FEDERAL RESERVE BULLETIN 750 (1934), where the Board interpreted section 32 to apply to the manager of a branch of a dealer in securities. As originally enacted, section 32 prohibited an interlock with a firm engaged "primarily in the business of purchasing, selling or negotiating securities." 48 Stat. 194. While an amendment to the statute in 1935 changed this provision to conform to the other provisions of the Act (49 Stat. 709), the amendment was not intended to change the scope of coverage of section 32. See H.R. Rep. No. 742, 74th Cong., 1st Sess. 17 (1935).

<sup>11. 51</sup> FEDERAL RESERVE BULLETIN 810 (1965); 12 C.F.R \$ 218.110. The fact that these Board interpretations were issued prior to the Supreme Court's Schwab decision is not persuasive. As noted above, the Supreme Court in Schwab stated, consistent with the Board's interpretation, that section 20 prohibits a bank affiliate from dealing in securities. 468 U.S. at 219 n.20.

<sup>12. 468</sup> U.S. at 219.

<sup>14.</sup> See Investment Company Institute v. Camp, 401 U.S. 617, 629-34 (1971).

<sup>1.</sup> The Board has received comments protesting the application from, inter alios, the National Association of Life Underwriters, National Association of Professional Insurance Agents, Independent Insurance Agents of America, Inc., National Association of Casualty and Surety Agents, and National Association of Surety Bond Productrs

Act and section 225.25(b)(8)(iii) of the Board's Regulation Y (12 C.F.R. 225.25(b)(8)(iii)), in Clarksville, Ionia County, Michigan, and in Georgetown Township, Ottawa County, Michigan. The Board's Regulation Y, as amended in November 1986,<sup>2</sup> states that a bank holding company may engage in general insurance agency activities in a place of 5,000 residents if it has a lending office in that place.<sup>3</sup>

Protesting insurance agents and insurance trade associations have argued that the Board must deny this application for a variety of reasons. Protestants suggest that although applicant is headquartered in, and has its principal and largest banking office in Wayland, Michigan, a place with a population of approximately 2,000 residents, Applicant maintains lending facilities in places with populations of more than 5,000 residents. Protestants also argue that the Georgetown Township office of Insurance Agency serves a "place" of more than 5,000 residents, in violation of the BHC Act.

The Board has previously decided in adopting the insurance amendments to Regulation Y that exemption C does not require a bank holding company to have its principal place of banking business in a town with a population of fewer than 5,000 residents. For reasons stated in detail in adopting its insurance regulation, the Board finds no merit to the argument advanced by Protestants that a bank holding company engaged in general insurance agency activities in a town of fewer than 5,000 residents must have not only its principal place of banking business in such a small town (as Applicant does), but also must have all lending offices in such small towns. Historically, the Board has never imposed such a requirement, and the suggestion by Protestants that even a bank holding company headquartered in a small town must cease its insurance agency activities if it establishes a branch bank or lending office in a town of greater than 5,000 inhabitants has no basis in the statutory language of exemption C, the legislative history of that provision, or in prior Board practice.

Protestants also assert that the Georgetown Township office operates in a place of greater than 5,000 residents. Applicant has stated that Insurance Agency's Georgetown Township office is located in a

"place" of fewer than 5,000 residents that consists of a split portion of census tract 216 with a 1980 census population of approximately 1,800. Applicant argues that since the Board's insurance regulation does not define a "place of 5,000" and since it appears to permit any "place" for which census data are available, a census tract is clearly the type of "place" contemplated by the BHC Act and the Board's regulation. The Board has stated, in amending its insurance regulation in November, 1986, that the Board would not define the term "place,"4 preferring to permit bank holding companies to demonstrate on a case-bycase basis that a particular location qualifies. The Board stated, however, that the reference to the decennial census in exemption C implies that the "place" must be a cognizable political subdivision such as a village, town, municipality, or township for which population figures are available.

The facts in the record, however, do not indicate that a split portion of a census tract in Georgetown Township is a place of fewer than 5,000 residents, as contemplated in section 4 of the BHC Act and the Board's Regulation Y.

On-site inspection by Federal Reserve staff of the area has revealed that the partial census tract cannot be distinguished as a separate community. It is not separated from the more populous, adjacent, unincorporated community of Jennison or the surrounding Georgetown Township by significant distance, physical barriers or even political subdivisions. Residents do not identify the census tract as a separate community or even have a name to identify the area. The census line is artificial, and there is no practical basis for the Board to find that Applicant's proposed office is in a separate community or "place" from the shopping area across the street simply because they are in separate portions of census tract 216.

Even under the Census Bureau's standards it does not appear that Applicant's delineated insurance service area would be a "place." Rather, the Census Bureau would view Applicant's proposed "place" only as the remaining portion of a census tract after a Census-designated place, consisting of an unincorporated community of 10,000 or more (Jennison, Michigan), has been excluded.

<sup>2. 51</sup> Federal Register 36,201 (October 9, 1986).

<sup>3.</sup> The acquisition of the office in the village of Clarksville raises no significant issues since it is a place of fewer than 5,000 residents, according to the 1980 census, and since Applicant has an office of a lending subsidiary in Clarksville.

<sup>4.</sup> Also, the term "place" is not defined in the BHC Act.

In addition, the record indicates that the census tract in question and Georgetown Township are fully integrated with, and a part of, the Grand Rapids, Michigan (population approximately 182,000), metropolitan area. There is uninterrupted economic development present from Grand Rapids to Insurance Agency's Georgetown Township office, and commuting and shopping patterns suggest that the Georgetown Township population is not locally limited. Acceptance of Applicant's proposal would extend the socalled "small town" exemption in the BHC Act to metropolitan areas. For example, there are approximately 975 census tracts in the Chicago Metropolitan Statistical Area with a population under 5,000. The Board, however, has interpreted the "town of 5,000" exemption, which is based on a similar provision in the National Bank Act for national banks, 12 U.S.C. § 92, as a means of providing insurance in small towns.

Moreover, the area in which Applicant proposes to sell insurance appears unrealistically limited or artificial because the proposed service area, consisting primarily of a sparsely populated flood plain, extends more than three miles from the office, but excludes the shopping area directly across the street from the insurance office as well as that portion of the census tract with a population of more than 10,000 residents. Even if Applicant does not actively solicit insurance sales from this part of the census tract, the office is likely to derive the major portion of its business from outside the proposed service area.

In view of all the facts of record, the Board concludes that the split portion of census tract 216 in Georgetown Township does not constitute a cognizable city, town, village, other political subdivision, or community and thus is not a place of fewer than 5,000 residents for purposes of exemption C of the BHC Act and section 225.25(b)(8)(iii) of the Board's Regulation Y.5

Because the proposal does not, as described above, fulfill the requirements of section 225.25(b)(8)(iii) of the Board's Regulation Y or section 4(c)(8) of the BHC Act, the proposed acquisition of Insurance Agency would not be permissible under the BHC Act and, accordingly, there is no need for the Board to analyze the public benefits of this proposed acquisition. On the basis of all the facts of record, the Board has deter-

mined that the application should be, and hereby is, denied for the reasons summarized above.<sup>6</sup>

By order of the Board of Governors, effective April 16, 1987.

Voting for this action: Chairman Volcker and Governors Johnson, Angell, and Heller. Abstaining from this action: Governor Seger.

[SEAL]

WILLIAM W. WILES Secretary of the Board

Orders Approved Under Sections 3 and 4 of the Bank Holding Company Act

RepublicBank Corporation Dallas, Texas

Order Approving Acquisition of a Bank Holding Company

RepublicBank Corporation, Dallas, Texas ("Applicant"), a bank holding company within the meaning of the Bank Holding Company Act (12 U.S.C. § 1841 et seq.) (the "Act"), has applied for the Board's approval under section 3 of the Act (12 U.S.C. § 1842) to acquire the successor by merger of InterFirst Corporation, Dallas, Texas ("IFC"), and thereby indirectly acquire its banking subsidiaries listed in Appendix A to this Order.1 Applicant also has applied under section 4(c)(8) of the Act (12 U.S.C. § 1843(c)(8)) to acquire the nonbanking subsidiaries of IFC listed in Appendix B to this Order. Applicant also has provided notice to the Board under section 4(c)(14) of the Act of its intention to acquire InterFirst World Trade Corporation, an export trading company. Upon consummation of this proposal, Applicant will operate under the name of First RepublicBank Corporation, Dallas, Texas ("FRB").

<sup>5.</sup> Applicant has not indicated that it would be possible to sever the transaction to acquire only the Clarksville office. Therefore, the application has been processed as an integrated proposal to acquire both offices of Insurance Agency and, thus, a denial of the acquisition of the Georgetown Township office also precludes the acquisition of the Clarksville office.

<sup>6.</sup> In light of the Board's conclusion that the application should be denied, it is unnecessary to deal with the protestants' request for a hearing.

<sup>1.</sup> Applicant will acquire IFC through a merger of IFC with RB-IF Merger Company, a wholly owned subsidiary of Applicant. RB-IF Merger Company will change its name to IFRB Corporation and become the surviving corporation. In connection with this application, RB-IF Merger Company has applied to become a bank holding company and to acquire the nonbanking subsidiaries listed in Appendix B to this Order and InterFirst World Trade Corporation.

Notice of the applications, affording opportunity for interested persons to submit comments, has been published (52 Federal Register 5,834 (1987)). The time for filing comments has expired, and the Board has considered the applications and all comments received in light of the factors set forth in sections 3(c) and 4(c)(8) of the Act.

Applicant, with approximately \$14.4 billion in domestic deposits representing approximately 9.5 percent of the total deposits in commercial banks in Texas, is the second largest commercial banking organization in Texas.<sup>2</sup> IFC is the third largest commercial banking organization in Texas with domestic deposits of approximately \$13.6 billion, representing approximately 8.9 percent of the total deposits in commercial banks in Texas. Upon consummation of this proposal, Applicant would become the largest commercial banking organization in Texas, controlling 18.4 percent of the total deposits in commercial banks in the state.

The Board has considered carefully the effects of the combination of the second and third largest commercial banking organizations in Texas on the concentration of banking resources in the state. Upon consummation of the proposal, Texas would remain unconcentrated, with the market share of the four largest commercial banking organizations in Texas increasing from 37.6 percent to 44.9 percent. In addition, numerous banking alternatives would remain in Texas upon consummation of the proposal. On the basis of these considerations, the Board concludes that consummation of the proposed transaction will have no substantial adverse effects on the concentration of banking resources in Texas.

In evaluating these applications, the Board has considered the financial resources of Applicant and the effect on those resources of the proposed acquisition. The Board has stated and continues to believe that capital adequacy is an especially important factor in the analysis of bank holding company proposals, particularly in transactions such as this in which the acquisition of a large organization experiencing financial problems is proposed. The Board expects that banking organizations experiencing substantial growth by acquisition should maintain a strong capital position substantially above the minimum levels specified in the Board's Capital Adequacy Guidelines.

After a review of Applicant's proposal in light of IFC's financial condition and the current difficulties in the Texas economy, the Board concludes that the pro forma financial and managerial resources of Applicant and its subsidiary banks are consistent with approval. In reaching this decision, the Board has noted as a matter of particular importance the circumstances under which this merger has been arranged. Due in part to a weak regional economy, Applicant recently has experienced a decline in operating performance, and IFC has suffered significant financial losses in recent years. The merger of the two companies and resulting cost savings are anticipated to position FRB to better withstand the current difficult economic situation in the energy and real estate sectors of the economy. Further, Applicant's pro forma capital base will provide a substantial cushion to absorb losses.

The Board also has considered the recommendations for approval of the transaction by the other federal bank regulatory agencies and in particular, the fact that this proposal, under the circumstances, represents the best available alternative to address IFC's financial difficulties. Based on all of the preceding financial factors and other facts of record, the Board concludes that on balance the financial resources of FRB and its subsidiary banks are consistent with approval of these applications.

Applicant and IFC compete directly in the Dallas, Houston, San Antonio, Fort Worth, Austin, Waco, Tyler, and Brown County markets.

Applicant is the largest commercial banking organization in the Dallas banking market,<sup>3</sup> controlling \$8.2

In this case, FRB's pro forma tangible primary capital ratio will be above Applicant's year-end 1986 tangible primary capital ratio, which is well above the minimum primary capital ratio under the Board's Guidelines. In addition, Applicant's pro forma total capital will be in excess of 10 percent. This acquisition has been structured as an exchange of shares, and Applicant will not incur any debt in connection with this proposal. The Board has given special attention to Applicant's commitment to issue significant additional primary capital to augment its capital base prior to consummation of this proposal. This increase in primary capital is considered to be a significant factor weighing in favor of the proposal.

<sup>2.</sup> Deposit data are as of June 30, 1986, and structure data are as of December 31, 1986.

<sup>3.</sup> The Dallas banking market is approximated by Dallas County, the southeast quadrant of Denton County (including Denton and Lewisville); the southwest quadrant of Collin County (including McKinney and Plano); the northern half of Rockwall County; the communities of Forney and Terrell in Kaufman County, Midlothian, Waxahachie and Ferris in Ellis County; and Grapevine and Arlington in Tarrant County.

billion in deposits, representing 25.0 percent of total deposits in commercial banks in the market. IFC is the third largest banking organization in the market, controlling \$4.2 billion in deposits, representing 12.6 percent of the market's bank deposits. The market is moderately concentrated with a Herfindahl-Hirschman Index ("HHI")<sup>4</sup> of 1216. Upon consummation of the proposal, Applicant would control approximately 37.6 percent of the market's bank deposits, and the HHI would increase by 630 points to 1846.

Applicant is the largest commercial banking organization in the Waco banking market,<sup>5</sup> controlling \$408.5 million in deposits, representing 27.6 percent of total deposits in commercial banks in the market. IFC is the fourth largest banking organization in the market, controlling \$120 million in deposits, representing 8.1 percent of the deposits in commercial banks in the market. Upon consummation of the proposal, Applicant would control approximately 35.7 percent of the market's bank deposits, and the HHI would increase by 346 points to 1883.

Applicant is the fifth largest commercial banking organization in the Austin banking market,<sup>6</sup> controlling \$395.4 million in deposits, representing 6.3 percent of total deposits in commercial banks in the market. IFC is the largest banking organization in the market, controlling \$1.5 billion in deposits, representing 23.7 percent of total deposits in the market. Upon consummation of the proposal, Applicant would become the largest commercial banking organization in the market, with a market share of approximately 30.0 percent, and the HHI would increase by 300 points to 1516.

Applicant is the third largest commercial banking organization in the Tyler banking market,<sup>7</sup> controlling \$280.0 million in deposits, representing 17.0 percent of total deposits in commercial banks in the market. IFC is the largest banking organization in the market, controlling \$348.0 million in deposits, representing 21.2 percent of the market's bank deposits. Upon

consummation of the proposal, Applicant would control approximately 38.2 percent of the market's bank deposits, and the HHI would increase by 719 points to 2126.

Although consummation of this proposal would eliminate some existing competition between Applicant and IFC in these banking markets, certain facts of record mitigate the adverse competitive effects of the proposal in these markets. Numerous other commercial banking organizations would continue to operate in each market after consummation of the proposal. Moreover, the Board has considered as an extenuating factor in its evaluation of the competitive effects of this proposal, the fact, as discussed above, that IFC has experienced financial difficulties over the last several years and that this proposal is designed to ensure the continued overall competitiveness of the resulting banking organization.

In addition, the Board has considered the presence of thrift institutions in the Dallas, Waco, Austin, and Tyler banking markets in its analysis of this proposal. The Board previously has indicated that thrift institutions have become, or have the potential to become, major competitors of commercial banks.8 Thrift institutions already exert a considerable competitive influence in the market as providers of checking, money market deposit accounts, NOW accounts, Super NOW accounts, and consumer loans, and many are engaged in the business of making commercial loans. Based upon the number, size, market shares, and commercial lending activities of thrift institutions in these markets, the Board has concluded that thrift institutions exert a significant competitive influence that mitigates the anticompetitive effects of this proposal in the Dallas, Waco, Austin, and Tyler markets. In accordance with the Board's practice, the Board has included in the calculation of market concentration 50 percent of the deposits controlled by thrift institutions.

Taking into account all of these factors, the Board notes that Applicant and IFC would control 20.4 percent and 10.3 percent of the total market deposits, respectively, in the Dallas market. The HHI would increase by 422 points to 1245 upon consummation of the proposal. In the Waco market, Applicant and IFC would control 21.0 percent and 6.2 percent of the total market deposits, respectively. The HHI would increase by 260 points to 1234 upon consummation of

<sup>4.</sup> Under the revised Department of Justice Merger Guidelines (49 Federal Register 26,823) a market in which the post-merger HHI is between 1000 and 1800 is considered moderately concentrated. In such markets, the Department is likely to challenge a merger that increases the HHI by more than 100 points. The Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indicating anticompetitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by at least 200 points. The Justice Department has stated that the higher than normal HHI thresholds for screening bank mergers for anticompetitive effects implicitly recognizes the competitive effect of limited purpose lenders and other nondepository financial entities.

<sup>5.</sup> The Waco banking market is approximated by McLennan County.

The Austin banking market is approximated by the Austin RMA.

<sup>7.</sup> The Tyler banking market is approximated by Smith County.

<sup>8.</sup> National City Corporation, 70 FEDERAL RESERVE BULLETIN 743 (1984); The Chase Manhattan Corporation, 70 FEDERAL RESERVE BULLETIN 529 (1984); NCNB Bancorporation, 70 FEDERAL RESERVE BULLETIN 225 (1984); General Bancshares Corporation, 69 FEDERAL RESERVE BULLETIN 802 (1983); First Tennessee Corporation, 69 FEDERAL RESERVE BULLETIN 298 (1983).

the proposal. In the Austin market, Applicant and IFC would control 4 percent and 20.1 percent of the total market deposits, respectively. The HHI would increase by 160 points to 1187 upon consummation of the proposal. In the Tyler market, Applicant and IFC would control 14.4 percent and 17.9 percent of the total market deposits, respectively. The HHI would increase by 513 points to 1570 upon consummation of the proposal. These market shares and concentration ratios are consistent with prior decisions by the Board involving acquisitions of direct competitors.

Even without the deposits controlled by thrift institutions in the Houston, San Antonio, and Fort Worth banking markets, Applicant's resulting market share in each of these markets would be less than 25 percent and the markets would remain moderately concentrated after consummation of the proposal. Moreover, numerous competitors would remain in each of these markets. Accordingly, consummation of the proposal would not have a substantial adverse competitive effect in these markets.

Applicant is the largest commercial banking organization in the Brown County market, <sup>10</sup> controlling \$102.8 million in deposits, representing 40.1 percent of total deposits in commercial banks in the market. IFC is the third largest commercial banking organization in the market, controlling \$58.5 million in deposits, representing 22.8 percent of total deposits in the market. Applicant has committed to divest IFC's bank in order to eliminate the adverse competitive effects that would otherwise result from consummation of this proposal. On the basis of this divestiture commitment, the Board concludes that consummation of the proposal would not tend substantially to lessen competition in the Brown County market.

Where, as in this case, a divestiture is proposed to avoid the otherwise substantial anticompetitive effects resulting from a proposed acquisition, the Board's policy requires that the divestiture take place on or before the date of consummation of the acquisition. Although the Board anticipates that every effort will be made to complete the divestiture before consummation of the acquisition of IFC, divestiture may not be possible before the expected consummation date be-

cause of the inability of the purchaser to obtain regulatory approval due to time constraints.<sup>12</sup>

The Board also has considered the effects of Applicant's proposal on probable future competition in the markets in which Applicant and IFC do not both compete. In light of the number of probable future entrants into those markets, the Board concludes that consummation of this proposal would not have a significant adverse effect on probable future competition in any relevant banking market.<sup>13</sup>

In considering the convenience and needs of the communities to be served, the Board has taken into account the records of Applicant and IFC under the Community Reinvestment Act ("CRA"), 12 U.S.C. § 2901 et seq.14 The Board has received comments from the Texas Association of Community Organizations for Reform Now, Dallas, Texas ("ACORN"), and the District 6 Land Use Committee, Dallas, Texas ("LUC"), regarding the CRA records of Applicant and IFC. ACORN has commented favorably on the application. However, LUC has alleged that Applicant and IFC have failed to serve the credit and deposit taking needs of the South Dallas community. In an attempt to resolve the concerns raised by the protest, Applicant has met and is continuing to meet with LUC; however, the parties have been unable to reach final agreements regarding LUC's concerns. Applicant has committed to pursue further discussions with LUC in an effort to reach an accommodation that will benefit the community and further the purposes of CRA along the lines of the agreements it has reached with other community groups, as discussed below.

In response to LUC's allegations, the Board has reviewed the records of Applicant and IFC in serving the credit and deposit needs of the South Dallas community. The Board's analysis indicates that Applicant and InterFirst do not treat minority neighbor-

<sup>9.</sup> The Houston banking market is approximated by the Houston RMA. The San Antonio banking market is approximated by the San Antonio RMA. The Fort Worth banking market is approximated by Tarrant County (excluding Grapevine and Arlington), Cleburne in Johnson County, the eastern half of Parker County (including Weatherford and Springtown), the communities of Boyd and Rhome in Wise County, and the community of Roanoke in Denton County.

<sup>10.</sup> The Brown County banking market is approximated by Brown County.

<sup>11.</sup> Barnett Banks of Florida, Inc., 68 FEDERAL RESERVE BULLE-TIN 190 (1982); InterFirst Corporation, 68 FEDERAL RESERVE BULLE-TIN 243 (1982).

<sup>12.</sup> If the purchaser is unable to acquire the bank prior to Applicant's acquisition of IFC because of delay in securing regulatory approval, an independent trustee must be appointed for the bank prior to consummation with instructions to divest the bank promptly. This is consistent with the need to consummate Applicant's acquisition of IFC expeditiously in order to assure the expected improvements in IFC's performance and avoid managerial or other problems that could result from delay. See, Wells Fargo & Company, 72 FEDERAL RESERVE BULLETIN 424 (1986).

<sup>13.</sup> Both Applicant and IFC own limited service commercial banks in Delaware. These banks were established primarily to offer consumer credit card services. The market for such credit card services is nationwide and unconcentrated, and the market shares controlled by Applicant and IFC are de minimis. Accordingly, consummation of the proposed transaction will not have a significant adverse effect on existing or probable future competition in any relevant market.

<sup>14.</sup> The CRA requires the Board, in its evaluation of a bank holding company application, to assess the record of an applicant in meeting the credit needs of the entire community, including the low- and moderate-income neighborhoods, consistent with safe and sound operation.

hoods in Dallas in a disparate manner with regard to home mortgage and home improvement lending.

In this regard, the Board notes that Applicant has recently entered into agreements with other community based organizations in Dallas and San Antonio that provide for Applicant to enhance its efforts to help meet local credit needs in those communities. Applicant's agreement with ACORN, for example, concerned four areas: housing-related activities, small business and personal loans, basic banking services, and community awareness. Specifically, Applicant agreed to make a good faith effort to reach a home mortgage and home improvement lending goal of a specific dollar amount to qualified borrowers in lowand moderate-income census tracts in Dallas; to meet with small businesses and small business groups and to improve its efforts to create flexible financing policies; to expand its money order business; to provide a lifeline checking plan; and to expand its community awareness program through advertising, attendance at community group meetings, and development of a marketing plan.

On March 16, 1987, the San Antonio Reinvestment Alliance, San Antonio, Texas, and several other community groups also signed an agreement with Applicant. Specifically, Applicant agreed to make a good faith effort to achieve mortgage loan and home improvement loan goals of specific dollar amounts in target markets; to make a good faith effort to meet construction and commercial loan goals of specific dollar amounts in target markets; to expand its senior citizen checking service; and to develop a marketing plan in certain target markets.

The Board also notes that the primary supervisors of Applicant's banks have determined that all of Applicant's banks have satisfactory CRA records. Applicant has committed to implement its practices and procedures with regard to CRA at IFC banks in order to ensure those banks' compliance with CRA. Finally, Applicant will file a detailed report of its review of its CRA procedures in order that the Federal Reserve System may evaluate Applicant's progress in meeting its CRA objectives and may ensure that Applicant improves the CRA performance of IFC's banks. Accordingly, based on all the facts of record, the Board concludes that convenience and needs considerations are consistent with approval of the applications. <sup>15</sup>

Applicant also has applied, pursuant to section

4(c)(8), to acquire IFC's nonbanking subsidiaries. Applicant operates mortgage lending and discount brokerage subsidiaries that compete with Company's nonbanking subsidiaries in these activities. Because of the large number of companies that engage in these activities, however, Applicant's acquisition of these subsidiaries will not have a significantly adverse effect on competition. Further, although both Applicant and Company have subsidiaries that provide credit life and accident and health insurance, the subsidiaries do not compete directly in the provision of this service because this type of insurance is not provided except in connection with extensions of credit made by each organization's credit-granting subsidiaries. Accordingly, the Board concludes that this proposal will not have any significant adverse effect upon competition in any relevant market.

The National Association of Life Underwriters, the National Association of Professional Insurance Agents, the Independent Insurance Agents of America, Inc., the National Association of Casualty and Surety Agents, and the National Association of Surety Bond Producers submitted comments questioning the permissibility of the insurance activities conducted by Company's subsidiary, InterFirst Finance Company. InterFirst Finance Company acts as a managing general agent in connection with the sale of property and casualty insurance on the real and personal property used in the operations of Company and its subsidiaries and the sale of group insurance that protects the employees of Company and its subsidiaries. These activities are permissible under section 4(c)(8)(E) of the Act and section 225.25(b)(8)(v) of the Board's Regulation Y. These activities are also permissible servicing activities under sections 4(a)(2)(A) and 4(c)(1)(C) of the Act, and section 225.22(a)(2)(ix) of the Board's Regulation Y. The Board previously has determined that the prohibition on insurance activities now contained in section 4(c)(8) of the Act as a result of the 1982 Garn-St Germain Depository Institutions Act has no bearing on the internal operations of a bank holding company. 49 Federal Register 808 (1984). Accordingly, the Board concludes that the insurance activities of Interfirst Finance Company are consistent with the Act.

There is no evidence in the record to indicate that approval of this proposal would result in undue concentration of resources, decreased or unfair competition, conflicts of interests, unsound banking practices, or other adverse effects on the public interest. Accordingly, the Board has determined that the balance of public interest factors it must consider under section 4(c)(8) of the Act is favorable and consistent with approval of the applications to acquire Company's nonbanking subsidiaries and activities.

<sup>15.</sup> LUC has also requested that the Board order a public hearing to enable LUC to present evidence substantiating its allegations. Although section 3(b) of the Act does not require a formal hearing in this instance, the Board may, in any case, order an informal or formal hearing. In light of the commitments made by Applicant and other facts of record, the Board has determined that a hearing would serve no useful purpose. Accordingly, LUC's request for a public hearing is denied.

The Board also has considered the notice of Applicant's proposed investment in InterFirst World Trade Corporation under section 4(c)(14) of the Act. Based on the facts of record, the Board has determined that disapproval of the proposed investment is not warranted.

Based on the foregoing and other facts of record, the Board has determined that the applications should be, and hereby are, approved. The acquisition of IFC shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Dallas, acting pursuant to delegated authority. The determinations as to Applicant's nonbanking activities are subject to all of the conditions contained in Regulation Y, including those in sections 225.4(d) and 225.23(b)(3) (12 C.F.R. §§ 225.4(d) and 225.23(b)(3)), and to the Board's authority to require such modification or termination of the activities of a holding company or any of its subsidiaries as the Board finds necessary to assure compliance with the provisions and purposes of the Act and the Board's regulations and orders issued thereunder, or to prevent evasion thereof.

By order of the Board of Governors, effective April 29, 1987.

Voting for this action: Chairman Volcker and Governors Johnson, Seger, Angell, and Heller.

JAMES McAFEE
Associate Secretary of the Board

# Financial and Business Statistics

#### **CONTENTS**

#### Domestic Financial Statistics

#### MONEY STOCK AND BANK CREDIT

- A3 Reserves, money stock, liquid assets, and debt measures
- A4 Reserves of depository institutions, Reserve Bank credit
- A5 Reserves and borrowings—Depository institutions
- A6 Selected borrowings in immediately available funds—Large member banks

#### **POLICY INSTRUMENTS**

- A7 Federal Reserve Bank interest rates
- A8 Reserve requirements of depository institutions
- A9 Federal Reserve open market transactions

#### FEDERAL RESERVE BANKS

A10 Condition and Federal Reserve note statements
A11 Maturity distribution of loan and security
holdings

#### MONETARY AND CREDIT AGGREGATES

- A12 Aggregate reserves of depository institutions and monetary base
- A13 Money stock, liquid assets, and debt measures
- A15 Bank debits and deposit turnover
- A16 Loans and securities—All commercial banks

#### COMMERCIAL BANKING INSTITUTIONS

- A17 Major nondeposit funds
- A18 Assets and liabilities, last-Wednesday-of-month series

#### WEEKLY REPORTING COMMERCIAL BANKS

#### Assets and liabilities

- A19 All reporting banks
- A20 Banks in New York City
- A21 Branches and agencies of foreign banks
- A22 Gross demand deposits—individuals, partnerships, and corporations

#### FINANCIAL MARKETS

- A23 Commercial paper and bankers dollar acceptances outstanding
- A23 Prime rate charged by banks on short-term business loans
- A24 Interest rates—money and capital markets
- A25 Stock market—Selected statistics
- A26 Selected financial institutions—Selected assets and liabilities

#### FEDERAL FINANCE

- A28 Federal fiscal and financing operations
- A29 U.S. budget receipts and outlays
- A30 Federal debt subject to statutory limitation
- A30 Gross public debt of U.S. Treasury—Types and ownership
- A31 U.S. government securities dealers— Transactions
- A32 U.S. government securities dealers—Positions and financing
- A33 Federal and federally sponsored credit agencies—Debt outstanding

# SECURITIES MARKETS AND CORPORATE FINANCE

- A34 New security issues—State and local governments and corporations
- A35 Open-end investment companies—Net sales and asset position
- A35 Corporate profits and their distribution

- A36 Nonfinancial corporations—Assets and liabilities
- A36 Total nonfarm business expenditures on new plant and equipment
- A37 Domestic finance companies—Assets and liabilities and business credit

#### REAL ESTATE

- A38 Mortgage markets
- A39 Mortgage debt outstanding

#### CONSUMER INSTALLMENT CREDIT

- A40 Total outstanding and net change
- A41 Terms

#### FLOW OF FUNDS

- A42 Funds raised in U.S. credit markets
- A43 Direct and indirect sources of funds to credit markets

#### Domestic Nonfinancial Statistics

#### SELECTED MEASURES

- A44 Nonfinancial business activity—Selected measures
- A45 Labor force, employment, and unemployment
- A46 Output, capacity, and capacity utilization
- A47 Industrial production—Indexes and gross value
- A49 Housing and construction
- A50 Consumer and producer prices
- A51 Gross national product and income
- A52 Personal income and saving

#### International Statistics

#### SUMMARY STATISTICS

- A53 U.S. international transactions—Summary
- A54 U.S. foreign trade
- A54 U.S. reserve assets

- A54 Foreign official assets held at Federal Reserve Banks
- A55 Foreign branches of U.S. banks—Balance sheet data
- A57 Selected U.S. liabilities to foreign official institutions

#### REPORTED BY BANKS IN THE UNITED STATES

- A57 Liabilities to and claims on foreigners
- A58 Liabilities to foreigners
- A60 Banks' own claims on foreigners
- A61 Banks' own and domestic customers' claims on foreigners
- A61 Banks' own claims on unaffiliated foreigners
- A62 Claims on foreign countries—Combined domestic offices and foreign branches

#### REPORTED BY NONBANKING BUSINESS ENTERPRISES IN THE UNITED STATES

- A63 Liabilities to unaffiliated foreigners
- A64 Claims on unaffiliated foreigners

#### SECURITIES HOLDINGS AND TRANSACTIONS

- A65 Foreign transactions in securities
- A66 Marketable U.S. Treasury bonds and notes— Foreign transactions

#### INTEREST AND EXCHANGE RATES

- A67 Discount rates of foreign central banks
- A67 Foreign short-term interest rates
- A68 Foreign exchange rates
- A69 Guide to Tabular Presentation, Statistical Releases, and Special Tables

#### SPECIAL TABLES

- A70 Assets and liabilities of commercial banks, March 31, 1986
- A76 Assets and liabilities of commercial banks, June 30, 1986

1. Unless otherwise noted, rates of change are calculated from average amounts outstanding in preceding month or quarter.

2. Figures incorporate adjustments for discontinuities associated with the implementation of the Monetary Control Act and other regulatory changes to reserve requirements. To adjust for discontinuities due to changes in reserve requirements on reservable nondeposit liabilities, the sum of such required reserves is subtracted from the actual series. Similarly, in adjusting for discontinuities in the monetary base, required clearing balances and adjustments to compensate for float also are subtracted from the actual series.

3. The monetary base not adjusted for discontinuities consists of total reserves plus required clearing balances and adjustments to compensate for float at Federal Reserve Banks plus the currency component of the money stock less the amount of vault cash holdings of thrift institutions that is included in the currency component of the money stock plus, for institutions not having required to satisfy current reserve requirements. After the introduction of contemporaneous reserve requirements (CRR), currency and vault cash figures are measured over the weekly computation period ending Monday.

Before CRR, all components of the monetary base other than excess reserves are added on a not seasonally adjusted basis. After CRR, the seasonally adjusted as a whole, rather than by component, and excess reserves are added on a not seasonally adjusted basis, plus the seasonally adjusted excess reserves on a not seasonally adjusted basis, plus the seasonally adjusted excess reserves on a not seasonally adjusted basis, plus the seasonally adjusted currency component of the money stock plus the remaining items seasonally adjusted to a whole.

4. Composition of the money stock measures and debt is as follows:

M: (1) currency outside the Treasury, Federal Reserve Banks, and the vaults

currency component of the money stock plus the remaining items seasonally adjusted as a whole.

4. Composition of the money stock measures and debt is as follows:
M1: (1) currency outside the Treasury, Federal Reserve Banks, and the vaults of commercial banks; (2) travelers checks of nonbank issuers; (3) demand deposits at all commercial banks other than those due to domestic banks, the U.S. government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float; and (4) other checkable deposits (OCD) consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions. The currency and demand deposit components exclude the estimated amount of vault cash and demand deposits respectively held by thrift institutions to service their OCD liabilities.

M2: M1 plus overnight (and continuing contract) repurchase agreements (RPs) issued by all commercial banks and overnight Eurodollars issued to U.S. residents (MDDAs), savings and small-denomination time deposits (time deposits—including retail RPs—in amounts of less than \$100,000), and balances in both taxable and tax-exempt general purpose and broker/dealer money market mutual funds. Excludes individual retirement accounts (IRA) and Keogh balances at depository institutions and money market funds. Also excludes all balances held by U.S.

commercial banks, money market funds (general purpose and broker/dealer), foreign governments and commercial banks, and the U.S. government. Also subtracted is a consolidation adjustment that represents the estimated amount of demand deposits and vault cash held by thrift institutions to service their time and

demand deposits and vault cash held by thrift institutions to service their time and savings deposits.

M3: M2 plus large-denomination time deposits and term RP liabilities (in amounts of \$100.000 or more) issued by commercial banks and thrift institutions, term Eurodollars held by U.S. residents at foreign branches of U.S. banks worldwide and at all banking offices in the United Kingdom and Canada, and balances in both taxable and tax-exempt, institution-only money market mutual funds. Excludes amounts held by depository institutions, Also subtracted is a consolidation adjustment that represents the estimated amount of overnight RPs and Eurodollars held by institution-only money market funds.

L: M3 plus the nonbank public holdings of U.S. savings bonds, short-term Treasury securities, commercial paper and bankers acceptances, net of money market mutual fund holdings of these assets.

market mutual fund holdings of these assets.

Debt: Debt of domestic nonfinancial sectors consists of outstanding credit market debt of the U.S. government, state and local governments, and private nonfinancial sectors. Private debt consists of corporate bonds, mortgages, consumer credit (including bank loans), other bank loans, commercial paper, bankers acceptances, and other debt instruments. The source of data on domestic nonfinancial debt is the Federal Reserve Board's flow of funds accounts. Debt data are based on monthly averages. Growth rates for debt reflect adjustments for discontinuities over time in the levels of debt presented in other tables.

5. Sum of overnight RPs and Eurodollars, money market fund balances (general purpose and broker/dealer), MMDAs, and savings and small time deposits less the estimated amount of demand deposits and vault cash held by thrift institutions to service their time and savings deposit liabilities.

6. Sum of large time deposits, term RPs, and Eurodollars of U.S. residents, money market fund balances (institution-only), less a consolidation adjustment that represents the estimated amount of overnight RPs and Eurodollars held by institution-only money market mutual funds.

7. Excludes MMDAs.

8. Small-denomination time deposits—including retail RPs—are those issued

7. Excludes MMDAs.
8. Small-denomination time deposits—including retail RPs—are those issued in amounts of less than \$100,000. All IRA and Keogh accounts at commercial banks and thrifts are subtracted from small time deposits.
9. Large-denomination time deposits are those issued in amounts of \$100,000 or more, excluding those booked at international banking facilities.
10. Large-denomination time deposits at commercial banks less those held by money market mutual funds, depository institutions, and foreign banks and official institutions.

11. Changes calculated from figures shown in table 1.23.

<sup>1.</sup> Includes securities loaned—fully guaranteed by U.S government securities pledged with Federal Reserve Banks—and excludes any securities sold and scheduled to be bought back under matched sale-purchase transactions.

2. Revised for periods between October 1986 and February 1987. During this interval, outstanding gold certificates were inadvertently in excess of the gold

stock. Revised data not included in this table are available from the Division of Research and Statistics, Banking Section.

3. Excludes required clearing balances and adjustments to compensate for float.

Note. For amounts of currency and coin held as reserves, see table 1.12.

<sup>1.</sup> Excludes required clearing balances and adjustments to compensate for

Excludes required clearing balances and adjustments to compensate float.
 Dates refer to the maintenance periods in which the vault cash can be used to satisfy reserve requirements. Under contemporaneous reserve requirements, maintenance periods end 30 days after the lagged computation periods in which the balances are held.
 3. Equal to all vault cash held during the lagged computation period by institutions having required reserve balances at Federal Reserve Banks plus the amount of vault cash equal to required reserves during the maintenance period at institutions having no required reserve balances.

4. Total vault cash at institutions having no required reserve balances less the amount of vault cash equal to their required reserves during the maintenance period.

<sup>5.</sup> Total reserves not adjusted for discontinuities consist of reserve balances with Federal Reserve Banks, which exclude required clearing balances and adjustments to compensate for float, plus vault cash used to satisfy reserve requirements. Such vault cash consists of all vault cash held during the lagged

computation period by institutions having required reserve balances at Federal Reserve Banks plus the amount of vault cash equal to required reserves during the maintenance period at institutions having no required reserve balances.

6. Reserve balances with Federal Reserve Banks plus vault cash used to satisfy reserve requirements less required reserves.

7. Extended credit consists of borrowing at the discount window under the terms and conditions established for the extended credit program to help depository institutions deal with sustained liquidity pressures. Because there is not the same need to repay such borrowing promptly as there is with traditional short-term adjustment credit, the money market impact of extended credit is similar to that of nonborrowed reserves.

8. Before February 1984, data are prorated monthly averages of weekly averages; beginning February 1984, data are prorated monthly averages of biweekly averages.

Note. These data also appear in the Board's H.3 (502) release. For address, see inside front cover.

<sup>1.</sup> After May 19, 1986, the highest rate within the structure of discount rates may be charged on adjustment credit loans of unusual size that result from a major operating problem at the borrower's facility.

A temporary simplified seasonal program was established on Mar. 8, 1985, and the interest rate was a fixed rate ½ percent above the rate on adjustment credit. The program was re-established on Feb. 18, 1986 and again on Jan. 28, 1987; the rate may be either the same as that for adjustment credit or a fixed rate ½ percent higher.

higher.

2. Applicable to advances when exceptional circumstances or practices involve only a particular depository institution and to advances when an institution is under sustained liquidity pressures. As an alternative, for loans outstanding for more than 150 days, a Federal Reserve Bank may charge a flexible rate that takes into account rates on market sources of funds, but in no case will the rate charged be less than the basic rate plus one percentage point. Where credit provided to a particular depository institution is anticipated to be outstanding for an unusually prolonged period and in relatively large amounts, the time period in which each

rate under this structure is applied may be shortened. See section 201.3(b)(2) of Regulation A.

3. Rates for short-term adjustment credit. For description and earlier data see the following publications of the Board of Governors: Banking and Monetary Statistics, 1914–1941, and 1941–1970; Annual Statistical Digest, 1970–1979, 1980, 1981, and 1982.

In 1980 and 1981, the Federal Reserve applied a surcharge to short-term adjustment credit borrowings by institutions with deposits of \$500 million or more that had borrowed in successive weeks or in more than 4 weeks in a calendar quarter. A 3 percent surcharge was in effect from Mar. 17, 1980, through May 7, 1980. There was no surcharge until Nov. 17, 1980, when a 2 percent surcharge was adopted; the surcharge was subsequently raised to 3 percent on Dec. 5, 1980, and to 4 percent on May 5, 1981. The surcharge was reduced to 3 percent effective Cot. 12. As of Oct. 1, the formula for applying the surcharge was changed from a calendar quarter to a moving 13-week period. The surcharge was eliminated on Nov. 17, 1981.

| аерози инстуат-   | Percent of deposits  | Effective date       |  |  |  |
| Net transaction accounts <sup>3,4</sup> \$0 million-\$36.7 million More than \$36.7 million     | 3<br>12  | 12/30/86<br>12/30/86 |  |  |  |
| Nonpersonal time deposits <sup>5</sup> By original maturity Less than 1½ years 1½ years or more | 3<br>0   | 10/6/83<br>10/6/83   |  |  |  |
| Eurocurrency liabilities All types  | 3  | 11/13/80             |  |  |  |

1. Reserve requirements in effect on Dec. 31, 1986. Required reserves must be held in the form of deposits with Federal Reserve Banks or vault cash. Nonmembers may maintain reserve balances with a Federal Reserve Bank indirectly on a pass-through basis with certain approved institutions. For previous reserve requirements, see earlier editions of the Annual Report and of the FEDERAL RESERVE BULLETIN. Under provisions of the Monetary Control Act, depository institutions include commercial banks, mutual savings banks, savings and loan associations, credit unions, agencies and branches of foreign banks, and Edge corporations. corporations.

corporations.

2. The Garn-St. Germain Depository Institutions Act of 1982 (Public Law 97–320) requires that \$2\$ million of reservable liabilities (transaction accounts, nonpersonal time deposits, and Eurocurrency liabilities) of each depository institution be subject to a zero percent reserve requirement. The Board is to adjust the amount of reservable liabilities subject to this zero percent reserve requirement each year for the succeeding calendar year by 80 percent of the percentage increase in the total reservable liabilities of all depository institutions, measured on an annual basis as of June 30. No corresponding adjustment is to be made in the event of a decrease. On Dec. 30, 1986, the exemption was raised from \$2.6 million to \$2.9 million. In determining the reserve requirements of depository institutions, the exemption shall apply in the following order: (1) net NOW accounts (NOW accounts less allowable deductions); (2) net other transaction accounts; and (3) nonpersonal time deposits or Eurocurrency liabilities starting with those with the nonpersonal time deposits or Eurocurrency liabilities starting with those with the

highest reserve ratio. With respect to NOW accounts and other transaction

highest reserve ratio. With respect to NOW accounts and other transaction accounts, the exemption applies only to such accounts that would be subject to a 3 percent reserve requirement.

3. Transaction accounts include all deposits on which the account holder is permitted to make withdrawals by negotiable or transferable instruments, payment orders of withdrawal, and telephone and preauthorized transfers in excess of three per month for the purpose of making payments to third persons or others. However, MMDAs and similar accounts subject to the rules that permit no more than six preauthorized, automatic, or other transfers per month, of which no more than three can be checks, are not transaction accounts (such accounts are savings deposits subject to time deposit reserve requirements).

4. The Monetary Control Act of 1980 requires that the amount of transaction accounts against which the 3 percent reserve requirement applies be modified annually by 80 percent of the percentage increase in transaction accounts held by all depository institutions, determined as of June 30 each year. Effective Dec. 30, 1986, the amount was increased from \$31.7 million to \$36.7 million.

5. In general, nonpersonal time deposits are time deposits, including savings

5. In general, nonpersonal time deposits are time deposits, including savings deposits, that are not transaction accounts and in which a beneficial interest is held by a depositor that is not a natural person. Also included are certain ransferable time deposits held by natural persons and certain obligations issued to depository institution offices located outside the United States. For details, see section 204.2 of Regulation D.

Includes securities loaned—fully guaranteed by U.S. government securities pledged with Federal Reserve Banks—and excludes (if any) securities sold and scheduled to be bought back under matched sale-purchase transactions.
 Assets shown in this line are revalued monthly at market exchange rates.
 Includes special investment account at Chicago of Treasury bills maturing within 90 days.

<sup>4.</sup> Includes exchange-translation account reflecting the monthly revaluation at market exchange rates of foreign-exchange commitments. Note: Some of these data also appear in the Board's H.4.1 (503) release. For address, see inside front cover.

<sup>1.</sup> Figures incorporate adjustments for discontinuities associated with the implementation of the Monetary Control Act and other regulatory changes to reserve requirements. To adjust for discontinuities due to changes in reserve requirements on reservable nondeposit liabilities, the sum of such required reserves is subtracted from the actual series. Similarly, in adjusting for discontinuities in the monetary base, required clearing balances and adjustments to compensate for float also are subtracted from the actual series.

2. Total reserves not adjusted for discontinuities consist of reserve balances with Federal Reserve Banks, which exclude required clearing balances and adjustments to compensate for float, plus vault cash used to satisfy reserve requirements. Such vault cash consists of all vault cash held during the lagged computation period by institutions having required reserve balances at Federal Reserve Banks plus the amount of vault cash equal to required reserves during the maintenance period at institutions having no required reserve balances.

3. Extended credit consists of borrowing at the discount window under the terms and conditions established for the extended credit program to help depository institutions dead with sustained liquidity pressures. Because there is not the same need to repay such borrowing promptly as there is with traditional short-term adjustment credit, the money market impact of extended credit is similar to that of nonborrowed reserves.

4. The monetary base not adjusted for discontinuities consists of total reserval program to help depositive required clearing the larges and adjustments to compensate for float at Federal larges and adjustments to compensate for float at Federal larges and adjustments to compensate for float at Federal larges and adjustments to compensate for float at Federal larges and adjustments to compensate for float at Federal larges.

A. The monetary base not adjusted for discontinuities consists of total reserves plus required clearing balances and adjustments to compensate for float at Federal Reserve Banks and the currency component of the money stock less the amount

of vault cash holdings of thrift institutions that is included in the currency component of the money stock plus, for institutions not having required reserve balances, the excess of current vault cash over the amount applied to satisfy current reserve requirements. After the introduction of contemporaneous reserve requirements (CRR), currency and vault cash figures are measured over the weekly computation period ending Monday.

Before CRR, all components of the monetary base other than excess reserves are seasonally adjusted as a whole, rather than by component, and excess reserves are added on a not seasonally adjusted basis. After CRR, the seasonally adjusted series consists of seasonally adjusted basis, plus the seasonally adjusted excess reserves on a not seasonally adjusted basis, plus the seasonally adjusted excess reserves on a not seasonally adjusted basis, plus the seasonally adjusted excurrency component of the money stock and the remaining items seasonally adjusted as a whole.

5. Reflects actual reserve requirements, including those on nondeposit liabilities, with no adjustments to eliminate the effects of discontinuities associated with implementation of the Monetary Control Act or other regulatory changes to reserve requirements.

Note. Latest monthly and biweekly figures are available from the Board's H.3(502) statistical release. Historical data and estimates of the impact on required reserves of changes in reserve requirements are available from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

#### NOTES TO TABLE 1.21

NOTES TO TABLE 1.21

1. Composition of the money stock measures and debt is as follows:

M1: (1) currency outside the Treasury, Federal Reserve Banks, and the vaults of commercial banks; (2) travelers checks of nonbank issuers; (3) demand deposits at all commercial banks other than those due to domestic banks, the U.S. government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float; and (4) other checkable deposits (OCD) consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions. The currency and demand deposit components exclude the estimated amount of vault cash and demand deposits respectively held by thrift institutions to service their OCD liabilities.

M2: M1 plus overnight (and continuing contract) repurchase agreements (RPs) issued by all commercial banks and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks worldwide, MMDAs, savings and small-denomination time deposits (time deposits—including retail RPs—in amounts of less than \$100,000), and balances in both taxable and tax-exempt general purpose and broker/dealer money market mutual funds. Excludes individual retirement accounts (IRA) and Keogh balances at depository institutions and money market funds. Also excludes all balances held by U.S. commercial banks, money market funds. (general purpose and broker/dealer), foreign governments and commercial banks, and the U.S. government. Also subtracted is a consolidation adjustment that represents the estimated amount of demand deposits and vault cash held by thrift institutions to service their time and savings deposits.

M3: M2 plus large-denomination time deposits and term RP liabilities (in amounts of \$100,000 or more) issued by commercial banks and thrift institutions, term Eurodollars held by U.S. residents at foreign branches of U.S. banks worldwide and at all bank

- 2. Currency outside the U.S. Treasury, Federal Reserve Banks, and vaults of commercial banks. Excludes the estimated amount of vault cash held by thrift institutions to service their OCD liabilities.

  3. Outstanding amount of U.S. dollar-denominated travelers checks of non-
- bank issuers. Travelers checks issued by depository institutions are included in demand deposits.
- 4. Demand deposits at commercial banks and foreign-related institutions other
- 4. Demand deposits at commercial banks and foreign-related institutions other than those due to domestic banks, the U.S. government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float. Excludes the estimated amount of demand deposits held at commercial banks by thrift institutions to service their OCD liabilities.
  5. Consists of NOW and ATS balances at all depository institutions, Other checkable deposits seasonally adjusted equals the difference between the seasonally adjusted deposits at thrift institutions. Other checkable duposits seasonally adjusted equals the difference between the seasonally adjusted sum of demand deposits at high expensive the propository institutions. Deregulation committee to be offered beginning Jan. 5, 1983.
- 1983.

  Sum of overnight RPs and overnight Eurodollars, money market fund balances (general purpose and broker/dealer), MMDAs, and savings and small time deposits, less the consolidation adjustment that represents the estimated amount of demand deposits and vault cash held by thrift institutions to service their time and savings deposits liabilities.

  7. Sum of large time deposits, term RPs and term Eurodollars of U.S. residents, money market fund balances (institution-only), less a consolidation adjustment that represents the estimated amount of overnight RPs and Eurodollars held by institution-only money market funds.

  8. Savings deposits exclude MMDAs.

  9. Small-denomination time deposits—including retail RPs— are those issued in amounts of less than \$100,000. All individual retirement accounts (IRA) and Keegh accounts at commercial banks and thrifts are subtracted from small time deposits.

- deposits.

  10. Large-denomination time deposits are those issued in amounts of \$100,000 or more, excluding those booked at international banking facilities.

  11. Large-denomination time deposits at commercial banks less those held by money market mutual funds, depository institutions, and foreign banks and official institutions.
- NOTE: Latest monthly and weekly figures are available from the Board's H.6 (508) release. Historical data are available from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

#### 1.22 BANK DEBITS AND DEPOSIT TURNOVER

Debits are shown in billions of dollars, turnover as ratio of debits to deposits. Monthly data are at annual rates.

Note. Historical data for demand deposits are available back to 1970 estimated in part from the debits series for 233 SMSAs that were available through June 1977. Historical data for ATS-NOW and savings deposits are available back to July 1977. Back data are available on request from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

These data also appear on the Board's G.6 (406) release. For address, see inside front cover.

Annual averages of monthly figures.
 Represents accounts of individuals, partnerships, and corporations and of states and political subdivisions.
 Accounts authorized for negotiable orders of withdrawal (NOW) and accounts authorized for automatic transfer to demand deposits (ATS). ATS data availability starts with December 1978.
 Excludes ATS and NOW accounts, MMDA and special club accounts, such as Christmas and vacation clubs.
 Money market deposit accounts.

<sup>1.</sup> Data have been revised because of benchmarking to new Call Reports beginning July 1985 and to new seasonal factors. Back data are available from the Banking Section, Board of Governors of the Federal Reserve System, Washington, D.C., 20551. These data also appear in the Board's G.7 (407) release.

Excludes loans to commercial banks in the United States.
 Includes nonfinancial commercial paper held.
 United States includes the 50 states and the District of Columbia.

business. This includes borrowings from Federal Reserve Banks and from foreign banks, term federal funds, overdrawn due from bank balances, loan RPs, and participations in pooled loans.

4. Averages of daily figures for member and nonmember banks.

5. Averages of daily data.

6. Based on daily average data reported by 122 large banks.

7. Includes U.S. Treasury demand deposits and Treasury tax-and-loan notes at commercial banks. Averages of daily data.

8. Averages of Wednesday figures.

<sup>1.</sup> Commercial banks are those in the 50 states and the District of Columbia with national or state charters plus agencies and branches of foreign banks, New York investment companies majority owned by foreign banks, and Edge Act corporations owned by domestically chartered and foreign banks.

2. Includes seasonally adjusted federal funds, RPs, and other borrowings from nonbanks and not seasonally adjusted net Eurodollars. Includes averages of Wednesday data for domestically chartered banks and averages of current and previous month-end data for foreign-related institutions.

3. Other borrowings are borrowings on any instrument, such as a promissory note or due bill, given for the purpose of borrowing money for the banking

condition report data. Data for other banking institutions are estimates made for the last Wednesday of the month based on a weekly reporting sample of foreign-related institutions and quarter-end condition reports.

2. Commercial banking institutions include insured domestically chartered commercial banks, branches and agencies of foreign banks, Edge Act and Agreement corporations, and New York State foreign investment corporations.

3. Insured domestically chartered commercial banks include all member banks and insured nonmember banks.

<sup>1.</sup> Data have been revised because of benchmarking to new Call Reports and new seasonal factors beginning July 1985. Back data are available from the Banking Section, Board of Governors of the Federal Reserve System, Washington, D.C., 20551.

Figures are partly estimated. They include all bank-premises subsidiaries and other significant majority-owned domestic subsidiaries. Loan and securities dat for domestically chartered commercial banks are estimates for the last Wednesday of the month based on a sample of weekly reporting banks and quarter-end

<sup>1.</sup> Includes securities purchased under agreements to resell.
2. Levels of major loan items were affected by the Sept. 26, 1984, transaction between Continental Illinois National Bank and the Federal Deposit Insurance Corporation. For details see the H.4.2 statistical release dated Oct. 5, 1984.
3. Includes federal funds purchased and securities sold under agreements to repurchase; for information on these liabilities at banks with assets of \$1 billion or more on Dec. 31, 1977, see table 1.13.

<sup>4.</sup> This is not a measure of equity capital for use in capital adequacy analysis or

<sup>4.</sup> If it is not a measure of equity capital for older analytic uses.

5. Exclusive of loans and federal funds transactions with domestic commercial banks.

6. Loans sold are those sold outright to a bank's own foreign branches, nonconsolidated nonbank affiliates of the bank, the bank's holding company (if not a bank), and nonconsolidated nonbank subsidiaries of the holding company.

Effective Jan. 1, 1986, the reporting panel includes 65 U.S. branches and agencies of foreign banks that include those branches and agencies with assets of \$750 million or more on June 30, 1980, plus those branches and agencies that had reached the \$750 million asset level on Dec. 31, 1984.
 Includes securities purchased under agreements to resell.
 Includes credit balances, demand deposits, and other checkable deposits.

<sup>4.</sup> Includes savings deposits, money market deposit accounts, and time deposits.
5. Includes securities sold under agreements to repurchase.
6. Exclusive of loans to and federal funds sold to commercial banks in the United States.

<sup>1.</sup> Figures include cash items in process of collection. Estimates of gross deposits are based on reports supplied by a sample of commercial banks. Types of depositors in each category are described in the June 1971 BULLETIN, p. 466. Figures may not add to totals because of rounding.

2. Beginning in March 1984, these data reflect a change in the panel of weekly reporting banks, and are not comparable to earlier data. Estimates in billions of dollars for December 1983 based on the new weekly reporting panel are: financial business, 24.4; nonfinancial business, 80.9; consumer, 30.1; foreign, 3.1; other, 9.5.

3. Beginning March 1985, financial business deposits and, by implication, total gross demand deposits have been redefined to exclude demand deposits due to

thrift institutions. Historical data have not been revised. The estimated volume of such deposits for December 1984 is \$5.0 billion at all insured commercial banks and \$3.0 billion at weekly reporting banks.

4. Historical data back to March 1985 have been revised to account for corrections of bank reporting errors. Historical data before March 1985 have not been revised, and may contain reporting errors. Data for all commercial banks for March 1985 were revised as follows (in billions of dollars): all holders, -3; financial business, -8; nonfinancial business, -4; consumer, 9; foreign, 1; other, -1. Data for weekly reporting banks for March 1985 were revised as follows (in billions of dollars): all holders, -1; financial business, -.7; nonfinancial business, -.5; consumer, 1.1; foreign, .1; other, -.2.

<sup>1.</sup> Effective Dec. 1, 1982, there was a break in the commercial paper series. The key changes in the content of the data involved additions to the reporting panel, the exclusion of broker or dealer placed borrowings under any master note agreements from the reported data, and the reclassification of a large portion of bank-related paper from dealer-placed to directly placed.

2. Correction of a previous misclassification of paper by a reporter has created a break in the series beginning December 1983. The correction adds some paper to nonfinancial and to dealer-placed financial paper.

3. Institutions engaged primarily in activities such as, but not limited to, commercial, savings, and mortgage banking; sales, personal, and mortgage financing; factoring, finance leasing, and other business lending; insurance underwriting; and other investment activities.

- Includes all financial company paper sold by dealers in the open market.
   As reported by financial companies that place their paper directly with investors
- investors.

  6. Includes public utilities and firms engaged primarily in such activities as communications, construction, manufacturing, mining, wholesale and retail trade, transportation, and services.

  7. Beginning October 1984, the number of respondents in the bankers acceptance survey were reduced from 340 to 160 institutions—those with \$50 million or more in total acceptances. The new reporting group accounts for over 95 percent of total acceptances activity.

places. Thus, average issuing rates in bill auctions will be reported using two

- places. Thus, average issuing rates in oil auctions will be reported using two rather than three decimal places.

  11. Yields are based on closing bid prices quoted by at least five dealers.

  12. Yields adjusted to constant maturities by the U.S. Treasury. That is, yields are read from a yield curve at fixed maturities. Based on only recently issued, actively traded securities.

- actively traded securities.

  13. Averages (to maturity or call) for all outstanding bonds neither due nor callable in less than 10 years, including one very low yielding "flower" bond.

  14. General obligations obased on Thursday figures; Moody's Investors Service.

  15. General obligations only, with 20 years to maturity, issued by 20 state and local governmental units of mixed quality. Based on figures for Thursday.

  16. Daily figures from Moody's Investors Service. Based on yields to maturity on selected long-term bonds.

  17. Compilation of the Federal Reserve. This series is an estimate of the yield on recently-offered, A-rated utility bonds with a 30-year maturity and 5 years of call protection. Weekly data are based on Friday quotations.

  18. Standard and Poor's corporate series. Preferred stock ratio based on a sample of ten issues: four public utilities, four industrials, one financial, and one transportation. Common stock ratios on the 500 stocks in the price index.

  NOTE. These data also appear in the Board's H.15 (519) and G.13 (415) releases. For address, see inside front cover.

Weekly and monthly figures are averages of all calendar days, where the rate for a weekend or holiday is taken to be the rate prevailing on the preceding business day. The daily rate is the average of the rates on a given day weighted by the volume of transactions at these rates.

2. Weekly figures are averages for statement week ending Wednesday.

3. Rate for the Federal Reserve Bank of New York.

4. Unweighted average of offering rates quoted by at least five dealers (in the case of commercial paper), or finance companies (in the case of finance paper Before November 1979, maturities for data shown are 30–59 days, 90–119 days, and 120–179 days for commercial paper; and 30–59 days, 90–119 days, and 150–179 days for finance paper.

<sup>179</sup> days for finance paper.

5. Yields are quoted on a bank-discount basis, rather than an investment yield basis (which would give a higher figure).

6. Dealer closing offered rates for top-rated banks. Most representative rate (which may be, but need not be, the average of the rates quoted by the dealers).

7. Unweighted average of offered rates quoted by at least five dealers early in

 <sup>1.</sup> Unweighted average of offered rates quoted by at least five dealers early in the day.
 1. Calendar week average. For indication purposes only.
 1. Unweighted average of closing bid rates quoted by at least five dealers.
 1. Rates are recorded in the week in which bills are issued. Beginning with the Treasury bill auction held on Apr. 18, 1983, bidders were required to state the percentage yield (on a bank discount basis) that they would accept to two decimal

<sup>1.</sup> Effective July 1976, includes a new financial group, banks and insurance companies. With this change the index includes 400 industrial stocks (formerly 425), 20 transportation (formerly 15 rail), 40 public utility (formerly 60), and 40 financial.

and dealers. Data items that are no longer reported include distributions of margin debt by equity status of the account and special miscellaneous-account balances.

7. Each customer's equity in his colleged (cond.)

ablances.

7. Each customer's equity in his collateral (market value of collateral less net debit balance) is expressed as a percentage of current collateral values.

8. Balances that may be used by customers as the margin deposit required for additional purchases. Balances may arise as transfers based on loan values of other collateral in the customer's margin account or deposits of cash (usually sales proceeds) occur.

9. Regulations G, T, and U of the Federal Reserve Board of Governors, prescribed in accordance with the Securities Exchange Act of 1934, limit the amount of credit to purchase and carry margin stocks that may be extended on securities as collateral by prescribing a maximum loan value, which is a specified percentage of the market value of the collateral at the time the credit is extended. Margin requirements are the difference between the market value (100) percent) and the maximum loan value. The term "margin stocks" is defined in the corresponding regulation.

financial.

2. Beginning July 5, 1983, the American Stock Exchange rebased its index effectively cutting previous readings in half.

3. Beginning July 1983, under the revised Regulation T, margin credit at broker-dealers includes credit extended against stocks, convertible bonds, stocks acquired through exercise of subscription rights, corporate bonds, and government securities. Separate reporting of data for margin stocks, convertible bonds, and subscription issues was discontinued in April 1984, and margin credit at broker-dealers became the total that is distributed by equity class and shown on lines 17-25. lines 17-22.

4. Free credit balances are in accounts with no unfulfilled commitments to the

<sup>5.</sup> New series beginning June 1984.
6. In July 1986, the New York Stock Exchange stopped reporting certain data items that were previously obtained in a monthly survey of a sample of brokers

1. Holdings of stock of the Federal Home Loan Banks are in "other assets."
2. Includes net undistributed income accrued by most associations.
3. As of July 1985, data include loans in process.
4. Excludes checking, club, and school accounts.
5. Data include all federally insured credit unions, both federal and state chartered, serving natural persons.
6. Direct and guaranteed obligations. Excludes federal agency issues not guaranteed, which are shown in the table under "Business" securities.
7. Issues of foreign governments and their subdivisions and bonds of the International Bank for Reconstruction and Development.
Note. Savings and loan associations: Estimates by the FHLBB for all associations in the United States based on annual benchmarks for non-FSLIC-insured associations.

FSLIC-insured federal savings banks: Estimates by the FHLBB for federal savings banks insured by the FSLIC and based on monthly reports of federally insured institutions.

Savings banks: Estimates by the National Council of Savings Institutions for all savings banks in the United States and for FDIC-insured savings banks that have converted to federal savings banks.

Credit unions: Estimates by the National Credit Union Administration for federally contrared and federally insured state chartered and federally insured state chartered and redit unions serving.

Credit unions: Estimates by the National Credit Union Administration for federally chartered and federally insured state-chartered credit unions serving natural persons.

Life insurance companies: Estimates of the American Council of Life Insurance for all life insurance companies in the United States. Annual figures are annual-statement asset values, with bonds carried on an amortized basis and stocks at year-end market value. Adjustments for interest due and accrued and for differences between market and book values are not made on each item separately but are included, in total, in "other assets."

<sup>1.</sup> In accordance with the Balanced Budget and Emergency Deficit Control Act of 1985, all former off-budget entries are now presented on-budget. The Federal Financing Bank (FFB) activities are now shown as separate accounts under the agencies that use the FFB to finance their programs. The act has also moved two social security trust funds (Federal old-age survivors insurance and Federal disability insurance trust funds) off-budget.

2. Includes U.S. Treasury operating cash accounts; SDRs; reserve position on the U.S. quota in the IMF; loans to International Monetary Fund; and other cash and monetary assets.

<sup>3.</sup> Includes accrued interest payable to the public; allocations of special drawing rights; deposit funds; miscellaneous liability (including checks outstanding) and asset accounts; seigniorage; increment on gold; net gain/loss for U.S. currency valuation adjustment; net gain/loss for IMF valuation adjustment; and profit on the sale of gold.

<sup>1.</sup> Transactions are market purchases and sales of securities as reported to the Federal Reserve Bank of New York by the U.S. government securities dealers on its published list of primary dealers.

Averages for transactions are based on the number of trading days in the period. The figures exclude allotments of, and exchanges for, new U.S. government securities, redemptions of called or matured securities, purchases or sales of securities under repurchase agreement, reverse repurchase (resale), or similar contracts. contracts.

2. Data for immediate transactions do not include forward transactions.

3. Includes, among others, all other dealers and brokers in commodities and

securities, nondealer departments of commercial banks, foreign banking agencies, and the Federal Reserve System.

4. Futures contracts are standardized agreements arranged on an organized exchange in which parties commit to purchase or sell securities for delivery at a future date.

5. Forward transactions are agreements arranged in the over-the-counter market in which securities are purchased (sold) for delivery after 5 business days from the date of the transaction for government securities (Treasury bills, notes, and bonds) or after 30 days for mortgage-backed agency issues.

NOTE. Data for the period May 1 to Sept. 30, 1986, are partially estimated.

<sup>1.</sup> Data for dealer positions and sources of financing are obtained from reports submitted to the Federal Reserve Bank of New York by the U.S. government securities dealers on its published list of primary dealers.

Data for positions are averages of daily figures, in terms of par value, based on the number of trading days in the period. Positions are net amounts and are shown on a commitment basis. Data for financing are in terms of actual amounts borrowed or lent and are based on Wednesday figures.

2. Immediate positions are net amounts (in terms of par values) of securities owned by nonbank dealer firms and dealer departments of commercial banks on a commitment, that is, trade-date basis, including any such securities that have been sold under agreements to repurchase (RPs). The maturities of some repurchase agreements are sufficiently long, however, to suggest that the securities involved are not available for trading purposes. Immediate positions include

reverses to maturity, which are securities that were sold after having been obtained under reverse repurchase agreements that mature on the same day as the securities. Data for immediate positions do not include forward positions.

3. Figures cover financing involving U.S. government and federal agency securities, negotiable CDs, bankers acceptances, and commercial paper.

4. Includes all reverse repurchase agreements, including those that have been arranged to make delivery on short sales and those for which the securities obtained have been used as collateral on borrowings, that is, matched agreements.

5. Includes both repurchase agreements undertaken to finance positions and "matched book" repurchase agreements.

Note. Data on positions for the period May 1 to Sept. 30, 1986, are partially estimated.

7. Includes outstanding noncontingent liabilities: Notes, bonds, and debentures. Some data are estimated.

8. Before late 1981, the Association obtained financing through the Federal Financing Bank.

9. The FFB, which began operations in 1974, is authorized to purchase or sell obligations issued, sold, or guaranteed by other federal agencies. Since FFB incurs debt solely for the purpose of lending to other agencies, its debt is not included in the main portion of the table in order to avoid double counting.

10. Includes FFB purchases of agency assets and guaranteed loans; the latter contain loans guaranteed by numerous agencies with the guarantees of any particular agency generally being small. The Farmers Home Administration item consists exclusively of agency assets, while the Rural Electrification Administration entry contains both agency assets and guaranteed loans.

Consists of mortgages assumed by the Defense Department between 1957 and 1963 under family housing and homeowners assistance programs.
 Includes participation certificates reclassified as debt beginning Oct. 1, 1976.
 Off-budget Aug. 17, 1974, through Sept. 30, 1976; on-budget thereafter.
 Consists of debentures issued in payment of Federal Housing Administration insurance claims. Once issued, these securities may be sold privately on the securities market. securities market.

Sccurities market of participation issued before fiscal 1969 by the Government National Mortgage Association acting as trustee for the Farmers Home Administration; Department of Health, Education, and Welfare; Department of Housing and Urban Development; Small Business Administration; and the Veterans Administration.

<sup>6.</sup> Off-budget.

Figures, which represent gross proceeds of issues maturing in more than one year, sold for cash in the United States, are principal amount or number of units multiplied by offering price. Excludes offerings of less than \$100,000, secondary offerings, undefined or exempted issues as defined in the Securities Act of 1933, employee stock plans, investment companies other than closed-end, intracorpo-rate transactions, and sales to foreigners.

<sup>2.</sup> Monthly data include only public offerings.
3. Beginning in August 1981, gross stock offerings include new equity volume from swaps of debt for equity.

<sup>1.</sup> Weighted averages based on sample surveys of mortgages originated by major institutional lender groups; compiled by the Federal Home Loan Bank Board in cooperation with the Federal Deposit Insurance Corporation.

2. Includes all fees, commissions, discounts, and "points" paid (by the borrower or the seller) to obtain a loan.

3. Average effective interest rates on loans closed, assuming prepayment at the end of 10 years.

- 6. Average net yields to investors on Government National Mortgage Association guaranteed, mortgage-backed, fully modified pass-through securities, assuming prepayment in 12 years on pools of 30-year FHA/VA mortgages carrying the prevailing ceiling rate. Monthly figures are averages of Friday figures from the Wall Street Journal.

  7. Includes some multifamily and nonprofit hospital loan commitments in addition to 1- to 4-family loan commitments accepted in FNMA's free market auction system, and through the FNMA-GNMA tandem plans.

  8. Includes participation as well as whole loans.

  9. Includes conventional and government-underwritten loans. FHLMC's mortgage commitments and mortgage transactions include activity under mortgage securities swap programs, while the corresponding data for FNMA exclude swap activity.

end of 10 years.

4. Average contract rates on new commitments for conventional first mortgages; from Department of Housing and Urban Development.

3. Average gross yields on 30-year, minimum-downpayment. Federal Housing
Administration-insured first mortgages for immediate delivery in the private
secondary market. Based on transactions on first day of subsequent month. Large
monthly movements in average yields may reflect market adjustments to changes
in maximum permissable contract rates.

Based on data from various institutional and governmental sources, with some quarters estimated in part by the Federal Reserve. Multifamily debt refers to loans on structures of five or more units.
 Includes loans held by nondeposit trust companies but not bank trust departments.
 Assumed to be entirely 1- to 4-family loans.
 FmHA-guaranteed securities sold to the Federal Financing Bank were

reallocated from FmHA mortgage pools to FmHA mortgage holdings in 1986: 4, because of accounting changes by the Farmers Home Administration.

5. Outstanding principal balances of mortgage pools backing securities insured or guaranteed by the agency indicated.

6. Other holders include mortgage companies, real estate investment trusts, state and local credit agencies, state and local retirement funds, noninsured pension funds, credit unions, and other U.S. agencies.

<sup>1.</sup> The Board's series cover most short- and intermediate-term credit extended to individuals that is scheduled to be repaid (or has the option of repayment) in two or more installments.

More detail for finance companies is available in the G.20 statistical release.
 Excludes 30-day charge credit held by travel and entertainment companies.
 All data have been revised.

Notes by Line Number.

1. Line 1 of table 1.57.

2. Sum of lines 3-6 or 7-10.

6. Includes farm and commercial mortgages.

11. Credit market funds raised by federally sponsored credit agencies, and net issues of federally related mortgage pool securities.

13. Line 1 less line 2 plus line 11 and 12. Also line 20 less line 27 plus line 33. Also sum of lines 28 and 47 less lines 40 and 46.

18. Includes farm and commercial mortgages.

16. Line 39 less lines 40 and 46.

27. Excludes equity issues and investment company shares. Includes line 19.

29. Foreign deposits at commercial banks, bank borrowings from foreign branches, and liabilities of foreign banking agencies to foreign affiliates, less claims on foreign affiliates and deposits by banking in foreign banks.

30. Demand deposits and note balances at commercial banks.

31. Excludes net investment of these reserves in corporate equities.
32. Mainly retained earnings and net miscellaneous liabilities.
33. Line 13 less line 20 plus line 27.
34-38. Lines 14-18 less amounts acquired by private finance plus amounts borrowed by private finance. Line 38 includes mortgages.
40. Mainly an offset to line 9.
47. Lines 33 plus 39, or line 13 less line 28 plus 40 and 46.
48. Line 20/line 1.
49. Line 20/line 1.
50. Sum of lines 10 and 29.
51, 53. Includes issues by financial institutions.

Note. Full statements for sectors and transaction types in flows and in amounts outstanding may be obtained from Flow of Funds Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

<sup>1.</sup> A major revision of the industrial production index and the capacity utilization rates was released in July 1985. See "A Revision of the Index of Industrial Production" and accompanying tables that contain revised indexes (1977-100) through December 1984 in the FEDERAL RESERVE BULLETIN, vol. 71 (July 1985), pp. 487-501. The revised indexes for January through June 1985 were shown in the September BULLETIN.

2. Ratios of indexes of production to indexes of capacity. Based on data from Federal Reserve, McGraw-Hill Economics Department, Department of Commerce, and other sources.

3. Index of dollar value of total construction contracts, including residential, nonresidential and heavy engineering, from McGraw-Hill Information Systems Company, F. W. Dodge Division.

4. Based on data in Employment and Earnings (U.S. Department of Labor). Series covers employees only, excluding personnel in the Armed Forces.

NOTE. Basic data (not index numbers) for series mentioned in notes 4, 5, and 6, and indexes for series mentioned in notes 3 and 7 may also be found in the Survey

of Current Business.

Figures for industrial production for the last two months are preliminary and estimated, respectively.

<sup>5.</sup> Based on data in Survey of Current Business (U.S. Department of Com-

Based on data in Survey of Current Business (U.S. Department of Commerce).
 Based on Bureau of Census data published in Survey of Current Business.
 Data without seasonal adjustment, as published in Monthly Labor Review.
 Seasonally adjusted data for changes in the price indexes may be obtained from the Bureau of Labor Statistics, U.S. Department of Labor.

# 2.11 LABOR FORCE, EMPLOYMENT, AND UNEMPLOYMENT

Thousands of persons; monthly data are seasonally adjusted. Exceptions noted.

<sup>1.</sup> Persons 16 years of age and over. Monthly figures, which are based on sample data, relate to the calendar week that contains the 12th day; annual data are averages of monthly figures. By definition, seasonality does not exist in population figures. Based on data from *Employment and Earnings* (U.S. Department of Labor).

2. Includes self-employed, unpaid family, and domestic service workers.

<sup>3.</sup> Data include all full- and part-time employees who worked during, or received pay for, the pay period that includes the 12th day of the month, and exclude proprietors, self-employed persons, domestic servants, unpaid family workers, and members of the Armed Forces. Data are adjusted to the March 1984 benchmark and only seasonally adjusted data are available at this time. Based on data from *Employment and Earnings* (U.S. Department of Labor).

<sup>▲</sup> A major revision of the industrial production index and the capacity utilization rates was released in July 1985. See "A Revision of the Index of Industrial Production" and accompanying tables that contain revised indexes (1977=100) through December 1984 in the FEDERAL RESERVE BULLETIN, vol. 71

(July 1985), pp. 487–501. The revised indexes for January through June 1985 were shown in the September BULLETIN.

NOTE. These data also appear in the Board's G.12.3 (414) release. For address, see inside front cover.

Monthly figures are at seasonally adjusted annual rates except as noted.

Note. Census Bureau estimates for all series except (a) mobile homes, which are private, domestic shipments as reported by the Manufactured Housing Institute and seasonally adjusted by the Census Bureau, and (b) sales and prices of existing units, which are published by the National Association of Realtors. All back and current figures are available from originating agency. Permit authorizations are those reported to the Census Bureau from 16,000 jurisdictions beginning with 1978.

<sup>1.</sup> Not at annual rates.
2. Not seasonally adjusted.
3. Value of new construction data in recent periods may not be strictly comparable with data in prior periods because of changes by the Bureau of the Census in its estimating techniques. For a description of these changes see Construction Reports (C-30-76-5), issued by the Bureau in July 1976.

4. Primarily associated with military sales contracts and other transactions arranged with or through foreign official agencies.
 5. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.
 NOTE. Data are from Bureau of Economic Analysis, Survey of Current Business (Department of Commerce).

Seasonal factors are not calculated for lines 6, 10, 12-16, 18-20, 22-34, and 38-41.
 Data are on an international accounts (IA) basis. Differs from the Census basis data, shown in table 3.11, for reasons of coverage and timing: military exports are excluded from merchandise data and are included in line 6.
 Includes reinvested earnings.

#### 3.11 U.S. FOREIGN TRADE

Millions of dollars; monthly data are not seasonally adjusted.

|   | 14   | 1983    | 1984    | 1985     |         |         |         | 1987    |        |         |         |

Note. The data through 1981 in this table are reported by the Bureau of Census data of a free-alongside-ship (f.a.s.) value basis—that is, value at the port of export. Beginning in 1981, foreign trade of the U.S. Virgin Islands is included in the Census basis trade data; this adjustment has been made for all data shown in the table. Beginning with 1982 data, the value of imports are on a customs valuation basis.

The Census basis data differ from merchandise trade data shown in table 3.10, U.S. International Transactions Summary, for reasons of coverage and timing. On the export side, the largest adjustments are: (1) the addition of exports to Canada not covered in Census statistics, and (2) the exclusion of military sales (which are combined with other military transactions and reported separately in the "service account" in table 3.10, line 6). On the import side, additions are made for gold, ship purchases, imports of electricity from Canada, and other transactions; military payments are excluded and shown separately as indicated above. As of Jan. 1, 1987 census data are released 45 days after the end of the month.

Marketable U.S. Treasury bills, notes, and bonds; and nonmarketable U.S.
 Treasury securities payable in dollars and in foreign currencies.
 Earmarked gold is valued at \$42.22 per fine troy ounce.

Note. Excludes deposits and U.S. Treasury securities held for international and regional organizations. Earmarked gold is gold held for foreign and international accounts and is not included in the gold stock of the United States.

<sup>1.</sup> Gold held under earmark at Federal Reserve Banks for foreign and international accounts is not included in the gold stock of the United States; see table 3.13. Gold stock is valued at \$42.22 per fine troy ounce.

2. Beginning July 1974, the IMF adopted a technique for valuing the SDR based on a weighted average of exchange rates for the currencies of member countries. From July 1974 through December 1980, 16 currencies were used; from January 1981, 5 currencies have been used. The U.S. SDR holdings and reserve position in the IMF also are valued on this basis beginning July 1974.

<sup>3.</sup> Includes allocations by the International Monetary Fund of SDRs as follows: \$867 million on Jan. 1, 1970; \$717 million on Jan. 1, 1971; \$710 million on Jan. 1, 1972; \$1,139 million on Jan. 1, 1979; \$1,152 million on Jan. 1, 1980; and \$1,093 million on Jan. 1, 1981; plus transactions in SDRs.

4. Valued at current market exchange rates.

<sup>1.</sup> Beginning with June 1984 data, reported claims held by foreign branches have been reduced by an increase in the reporting threshold for "shell" branches from \$50 million to \$150 million equivalent in total assets, the threshold now applicable to all reporting branches.

<sup>2.</sup> Data for assets vis-à-vis other banks in the United States and vis-à-vis nonbanks are combined for dates before June 1984.

<sup>1.</sup> Assets owned by customers of the reporting bank located in the United States that represent claims on foreigners held by reporting banks for the accounts of their domestic customers.

Note. Data on claims exclude foreign currencies held by U.S. monetary authorities.

Includes the Bank for International Settlements.
 Principally demand deposits, time deposits, bankers acceptances, commercial paper, negotiable time certificates of deposit, and borrowings under repurchase agreements.

chase agreements.

3. Includes nonmarketable certificates of indebtedness (including those payable in foreign currencies through 1974) and Treasury bills issued to official institutions of foreign countries.

4. Excludes notes issued to foreign official nonreserve agencies. Includes bonds and notes payable in foreign currencies.

Debt securities of U.S. government corporations and federally sponsored agencies, and U.S. corporate stocks and bonds.
 Includes countries in Oceania and Eastern Europe.
 NOTE. Based on Treasury Department data and on data reported to the Treasury Department by banks (including Federal Reserve Banks) and securities dealers in the United States.

<sup>1.</sup> The banking offices covered by these data are the U.S. offices and foreign branches of U.S.-owned banks and of U.S. subsidiaries of foreign-owned banks. Offices not covered include (1) U.S. agencies and branches of foreign banks, and (2) foreign subsidiaries of U.S. banks. To minimize duplication, the data are adjusted to exclude the claims on foreign branches held by a U.S. office or another foreign branch claims in table 3.14 (the sum of lines 7 through 10) with the claims of U.S. offices in table 3.18 (excluding those held by agencies and branches of foreign banks and those constituting claims on own foreign branches).

2. Beginning with June 1984 data, reported claims held by foreign branches have been reduced by an increase in the reporting threshold for "shell" branches

from \$50 million to \$150 million equivalent in total assets, the threshold now applicable to all reporting branches.

3. Besides the Organization of Petroleum Exporting Countries shown individually, this group includes other members of OPEC (Algeria, Gabon, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, and United Arab Emirates) as well as Bahrain and Oman (not formally members of OPEC).

4. Excludes Liberia.

5. Includes Canal Zone beginning December 1979.

6. Foreign branch claims only.

7. Includes New Zealand, Liberia, and international and regional organizations.

## 3.22 LIABILITIES TO UNAFFILIATED FOREIGNERS Reported by Nonbanking Business Enterprises in the United States<sup>1</sup>

For a description of the changes in the International Statistics tables, see July 1979 BULLETIN, p. 550.
 Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).

Comprises Algeria, Gabon, Libya, and Nigeria.
 Includes nonmonetary international and regional organizations.
 Revisions include a reclassification of transactions, which also affects the totals for Asia and the grand totals.

# 3.23 CLAIMS ON UNAFFILIATED FOREIGNERS Reported by Nonbanking Business Enterprises in the United States<sup>1</sup>

Millions of dollars, end of period

| Austria Belgium Brazil Canada Denmark | 8.5<br>49.0  | Jan. 1987<br>Jan. 1987<br>Mar. 1981<br>Mar. 1987<br>Oct. 1983 | France <sup>1</sup> | 3.5<br>11.5<br>2.5    | Mar. 1987<br>Mar. 1986<br>Mar. 1987<br>Feb. 1987<br>Mar. 1986 | Norway                | 3.5          | June 1983<br>Jan. 1987<br>Oct. 1985 |         |               |

<sup>1.</sup> As of the end of February 1981, the rate is that at which the Bank of France discounts Treasury bills for 7 to 10 days.

2. Minimum lending rate suspended as of Aug. 20, 1981.

Note. Rates shown are mainly those at which the central bank either discounts

or makes advances against eligible commercial paper and/or government commercial banks or brokers. For countries with more than one rate applicable to such discounts or advances, the rate shown is the one at which it is understood the central bank transacts the largest proportion of its credit operations.

<sup>1.</sup> Value in U.S. cents.
2. Index of weighted-average exchange value of U.S. dollar against currencies of other G-10 countries plus Switzerland. March 1973 = 100. Weights are 1972-76 global trade of each of the 10 countries. Series revised as of August 1978. For description and back data, see "Index of the Weighted-Average Exchange Value of the U.S. Dollar: Revision" on p. 700 of the August 1978 BULLETIN.

<sup>3.</sup> Currency reform. Note. Averages of certified noon buying rates in New York for cable transfers. Data in this table also appear in the Board's G.5 (405) release. For address, see inside front cover.

## Guide to Tabular Presentation, Statistical Releases, and Special Tables

#### GUIDE TO TABULAR PRESENTATION

#### Symbols and Abbreviations

Corrected Estimated e Preliminary p Revised (Notation appears on column heading when about half of the figures in that column are changed.)

Amounts insignificant in terms of the last decimal place

shown in the table (for example, less than 500,000 when the smallest unit given is millions)

Calculated to be zero

n.a. Not available Not elsewhere classified n.e.c.

**IPCs** Individuals, partnerships, and corporations

**REITs** Real estate investment trusts **RPs** Repurchase agreements

**SMSAs** Standard metropolitan statistical areas

Cell not applicable

#### General Information

Minus signs are used to indicate (1) a decrease, (2) a negative figure, or (3) an outflow.

"U.S. government securities" may include guaranteed issues of U.S. government agencies (the flow of funds figures also include not fully guaranteed issues) as well as direct obligations of the Treasury. "State and local government" also includes municipalities, special districts, and other political subdivisions.

In some of the tables details do not add to totals because of rounding.

1. Effective Mar. 31, 1984, the report of condition was substantially revised for commercial banks. Some of the changes are as follows: (1) Previously, banks with international banking facilities (IBFs) that had no other foreign offices were considered domestic reporters. Beginning with the Mar. 31, 1984 call report these banks are considered foreign and domestic reporters and must file the foreign and domestic report of condition; (2) banks with assets greater than \$1 billion have additional items reported; (3) the domestic office detail for banks with foreign offices has been reduced considerably; and (4) banks with assets under \$25 million have been excused from reporting certain detail items.

2. The "n.a." for some of the items is used to indicate the lesser detail available from banks without foreign offices, the inapplicability of certain items to banks that have only domestic offices and/or the absence of detail on a fully consolidated basis for banks with foreign offices.

3. All transactions between domestic and foreign offices of a bank are reported in "net due from" and "net due to." All other lines represent transactions with parties other than the domestic and foreign offices of each bank. Since these intraoffice transactions are nullified by consolidation, total assets and total liabilities for the entire bank may not equal the sum of assets and liabilities respectively, of the domestic and foreign offices.

4. Foreign offices include branches in foreign countries, Puerto Rico, and in U.S. territories and possessions; subsidiaries in foreign countries; all offices of Edge Act and Agreement corporations wherever located and IBFs.

5. The 'over 100' column refers to those respondents whose assets, as of June 30 of the previous calendar year, were equal to or exceeded \$100 million. (These respondents file the FFIEC 032 or FFIEC 033 call report.) The 'under 100' column refers to those respondents whose assets, as of June 30 of the previous calendar year, were less than \$100 million. (These respondents filed the FFIEC 034 call report).

year, were less than \$100 million. (These respondents filed the FFIEC 034 call report.)

6. Since the domestic portion of allowances for loan and lease losses and allocated transfer risk reserve are not reported for banks with foreign offices, the components of total assets (domestic) will not add to the actual total (domestic).

7. Since the foreign portion of demand notes issued to the U.S. Treasury is not reported for banks with foreign offices, the components of total iiabilities (foreign) will not add to the actual total (foreign).

8. The definition of 'all other' varies by report form and therefore by column in this table. See the instructions for more detail.

9. Equity capital is not allocated between the domestic and foreign offices of banks with foreign offices.

10. Components of assets held in trading accounts are only reported for banks with total assets of \$1 billion or more; therefore the components will not add to the totals for this item.

| 101 Number of banks.   | 14,182   | 5,953   | 4,866  | 1,087  | 8,229   |

1. Effective Mar. 31, 1984, the report of condition was substantially revised for commercial banks. Some of the changes are as follows: (1) Previously, banks with international banking facilities (IBFs) that had no other foreign offices were considered domestic reporters. Beginning with the Mar. 31, 1984 call report hese banks are considered foreign and domestic reporters and must file the foreign and domestic report of condition; (2) banks with assets greater than \$1 billion have additional items reported; (3) the domestic office detail for banks with foreign offices has been reduced considerably; and (4) banks with assets under \$25 million have been excused from reporting certain detail items.

2. The "n.a." for some of the items is used to indicate the lesser detail available from banks without foreign offices, the inapplicability of certain items to banks that have only domestic offices and/or the absence of detail on a fully consolidated basis for banks with foreign offices.

3. All transactions between domestic and foreign offices of a bank are reported in "net due from" and "net due to." All other lines represent transactions with parties other than the domestic and foreign offices of each bank. Since these intraoffice transactions are nullified by consolidation, total assets and total liabilities for the entire bank may not equal the sum of assets and liabilities respectively, of the domestic and foreign offices.

4. Foreign offices include branches in foreign countries, Puerto Rico, and in U.S. territories and possessions; subsidiaries in foreign countries; all offices of Edge Act and Agreement corporations wherever located and IBFs.

5. The 'over 100' column refers to those respondents whose assets, as of June 30 of the previous calendar year, were equal to or exceeded \$100 million. (These respondents file the FFIEC 032 or FFIEC 033 call report.) The 'under 100' column refers to those respondents whose assets, as of June 30 of the previous calendar year, were less than \$100 million. (These respondents filed the FFIEC 034 call report.)

year, were less than \$100 million. (These respondents filed the FFIEC 034 call report.)

6. Since the domestic portion of allowances for loan and lease losses and allocated transfer risk reserve are not reported for banks with foreign offices, the components of total assets (domestic) will not add to the actual total (domestic).

7. Since the foreign portion of demand notes issued to the U.S. Treasury is not reported for banks with foreign offices, the components of total liabilities (foreign) will not add to the actual total (foreign).

8. The definition of 'all other' varies by report form and therefore by column in this table. See the instructions for more detail.

9. Equity capital is not allocated between the domestic and foreign offices of banks with foreign offices.

10. Components of assets held in trading accounts are only reported for banks with total assets of \$1 billion or more; therefore the components will not add to the totals for this item.

totals for this item.
